Seven reasons for Sigma-7

The Sigma Series of Servo Drives has evolved into the Sigma-7 Servo Drives, which provides you with the ultimate experience in seven key areas and delivers the optimal solution that only Yaskawa can offer.

1 Comprehensive motor and amplifier power range

Wide power range

- Very compact motors from 50 W to 15 kW
- Linear motors with iron core or ironless and peak forces up to 7,560 N

2 Savings through performance

Lower production costs

- Speed loop bandwidth of 3.1 kHz
- Shorter settling time, reduced positioning time, higher throughput

No additional cooling necessary

- Ambient temperature -5 – 55 °C (max. 60 °C with derating)

Energy savings and higher productivity

- High peak torque, fast acceleration, no amplifier oversizing
- Lightweight mechanics

Higher performance

- Overload 350 % for 3 – 5 seconds
- High peak torque, fast acceleration

3 Safety features

Smooth integration of mandatory legal safety standards

- The STO function is implemented by default in all Sigma-7 series servo amplifiers
- Build safer machines - Sigma-7 satisfies the requirements of SIL 3 and PLe
- The safety functions STO, SS1, SS2, SOS, SLS, SLA, SSR, SDI, SLP, SLI, SLT, SMT, SCA and SSM can be integrated by using the safety module

4 High efficiency

Very low heat generation

- Optimized magnetic circuit improves motor efficiency
- Improved motor efficiency reduces heat generation and allows for more compact machines

5 High accuracy

Next level 24-bit absolute encoder for maximum accuracy

- Resolution of 16 million pulses per revolution for extremely precise positioning

6 Impressive system performance

Very high precision teamed up with fast, smooth operation

- Ripple compensation for highest demands in smoothness and dynamics
- Even for machines for which speed loop gains cannot be set high

7 Outstanding reliability

Even more reliability for your production

- More than 20 million servo systems in the field
- Improved machine reliability, reduced service and maintenance costs, less downtime

Servomotors

Rotary

SGM7J

- Medium inertia, high speed
- 200 W - 1.5 kW

SGM7A

- Low inertia, high speed
- 200 W - 7.0 kW

SGM7G

- Medium inertia, high torque, low speed or high speed models
- 450 W - 15 kW

Linear

SGLFW2

- Model with F-type iron core
- Rated: 45 N - 2,520 N
  Peak: 135 N - 7,560 N

Code	Specifications
1	Without options
C*3	With holding brake (24 VDC)
F*2, *3	With dust seal
H*2, *3	With dust seal and holding brake (24 VDC)

*1 Please contact your Yaskawa representative about availability.
*2 This option is supported only for SGM7A-10 to -50 Servomotors.
*3 These options are not supported by SGM7A-70 Servomotors.

SGM7G - 05 D F F 6 F

Sigma-7 Series Servomotors: SGM7G

1st + 2nd | 3rd | 4th | 5th | 6th | 7th digit

1st + 2nd digit - Rated Output

Code	Specification
05	450 W
09	850 W
13	1.3 kW
20	1.8 kW
30	2.9 kW
44	4.4 kW
55	5.5 kW
75	7.5 kW
1A	11.0 kW
1E	15.0 kW

3rd digit - Power Supply Voltage

Code	Specification
D	400 VAC

4th digit - Serial Encoder

Code	Specification
6*1	24-bit batteryless absolute
7	24-bit absolute
F	24-bit incremental

5th digit - Design Revision Order

Code	Specification
F	Standard Model
R*3	High-speed Model

6th digit - Shaft End

Code	Specification
2	Straight without key (450 W, 1.8 kW, 2.9 kW)
6	Straight with key and tap (450 W, 1.8 kW, 2.9 kW)
S*2	Straight without key (850 W, 1.3 kW)
K*2	Straight with key and tap (850 W, 1.3 kW)

7th digit - Options

Code	Specification
1	Without options
C	With holding brake (24 VDC)
F	With dust seal
H	With dust seal and holding brake (24 VDC)

*1 Please contact your Yaskawa representative about availability.
*2 The shaft end codes are different for 850 kW and 1.3 kW Servomotors.
The shaft diameter for 850 W Servomotors is 19 mm.
The shaft diameter for 1.3 kW Servomotors is 22 mm.
*3 Available up to 4.4 kW.

SERVOPACKs

Single axis amplifier

SGD7S - 1R9 D A0 B 000 F64

Sigma-7 Series Sigma-7S Models	1st ... 3rd	4th	5th + 6th	7th	8th ... 10th	11th ... 13th digit

1st ... 3rd digit - Maximum Applicable Motor Capacity

Code	Specification
Three-phase, 400 V	
1R9	0.5 kW
3R5	1.0 kW
5R4	1.5 kW
8R4	2.0 kW
120	3.0 kW
170	5.0 kW
210	6.0 kW
260	7.5 kW
280	11.0 kW
370	15.0 kW

4th digit - Voltage

Code	Specification
D	400 V AC

5th + 6th digit - Interface*1

Code	Specification
A0	EtherCAT communication reference
C0	PROFINET communication reference
30	MECHATROLINK-III, RJ45 communication reference
M0	Sigma-7Siec (with built-in single-axis control)

7th digit - Design Revision Order

B	Standard Model

8th ... 10th digit - Hardware Options Specifications

Code	Specification	Applicable Models
None	Without Options	All models
000	Without Options only used in combination with FT/EX	All models
026*2	With relay for holding brake	All models

11th ... 13th digit - FT/EX Specification

Code	Specification
None	Without Options
F64*3	Zone table
F50	Application function for Sigma-7Siec
F91	For use with SGD7S-OSB0#A (including F64 function)

Depending on configuration choices made, the model code might end after the 7th or 10th digit, or involve all 13 digits.

*1. The same SERVOPACKs are used for both rotary and linear servomotors.
*2. For specification of the internal brake relay, please refer to the hardware manual of the amplifier.
*3. Only available for EtherCAT (CoE) and MECHATROLINK-III communication references.

Dual axis amplifier

SGD7W - 2R6 D A0 B 026

Sigma-7 Series Sigma-7W Models	1st ... 3rd	4th	5th + 6th	7th	8th ... 10th digit

1st ... 3rd digit - Maximum Applicable Motor Capacity

Code	Specification
Three-phase, 400 V	
2R6	2 × 0.75 kW
5R4	2 × 1.5 kW

4th digit - Voltage

Code	Specification
D	400 V AC

5th + 6th digit - Interface

Code	Specification
A0	EtherCAT communication reference
30	MECHATROLINK-III, RJ45 communication reference

7th digit - Design Revision Order

B	Standard Model

8th ... 10th digit - Hardware Options Specifications

Code	Specification	Applicable Models
None	Without Options	All models
026*	With relay for holding brake	All models

* For specification of the internal brake relay, please refer to the hardware manual of the amplifier.

Linear servomotors with F-Type iron cores

Moving coil

S G L F W2 - 30 D 070 A S 1 E

Sigma-7 Series Linear Servomotors: 1st 2nd 3rd + 4th 5th 6th - 8th 9th 10th 11th 12th digit

1st digit - Servomotor Type

Code	Specification
F	With F-type iron core

2nd digit - Moving Coil/Magnetic Way

Code	Specification
W2	Moving Coil

3rd + 4th digit - Magnet Height

Code	Specification
30	30 mm
45	45 mm
90	90 mm
1D	135 mm

5th digit - Power Supply Voltage

Code	Specification
D	400 VAC

6th ... 8th digit - Length of Moving Coil

Code	Specification
070	70 mm
120	125 mm
200	205 mm
230	230 mm
380	384 mm

9th digit - Design Revision Order

Code	Specification
A	Standard Model

10th digit - Sensor Specification

Code	Specification
T	Without polarity sensor, with thermal protector
S	With polarity sensor and thermal protector

11th digit - Options

Code	Cooling Method
1	Self-cooled
L	Water-cooled*

12th digit - Options

Code	Connection
E	Metal round connector (Phoenix)

* Contact your Yaskawa representative for information on water-cooled model.

Magnetic way

S G L F M2 - 30 270 A

Sigma-7 Series Linear Servomotors: 1st 2nd 3rd + 4th 5th - 7th 8th digit

1st digit - Servomotor Type

Code	Specification

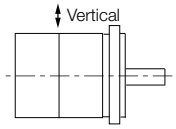
Specifications and ratings

Specifications

Voltage		400 V			
Model SGM7J-		**02D**	**04D**	**08D**	**15D**
Time Rating		Continuous			
Thermal Class		B			
Insulation Resistance		500 VDC, 10 MOhm min.			
Withstand Voltage		1,800 VAC for 1 minute			
Excitation		Permanent magnet			
Mounting		Flange-mounted			
Drive Method		Direct drive			
Rotation Direction		Counterclockwise (CCW) for forward reference when viewed from the load side			
Vibration Class*1		V15			
Environmental Conditions	Surrounding Air Temperature	0 °C to 40 °C (With derating, usage is possible between 40 °C and 60 °C)*4			
	Surrounding Air Humidity	20% to 80% relative humidity (with no condensation)			
	Installation Site	• Must be indoors and free of corrosive and explosive gases. • Must be well-ventilated and free of dust and moisture. • Must facilitate inspection and cleaning. • Must have an altitude of 1,000 m or less. (With derating, usage is possible between 1,000 m and 2,000 m.)*5 • Must be free of strong magnetic fields.			
	Storage Environment	Store the Servomotor in the following environment if you store it with the power cable disconnected. Storage Temperature: -20 °C to 60 °C (with no freezing) Storage Humidity: 20% to 80% relative humidity (with no condensation)			
Shock Resistance*2	Impact Acceleration Rate at Flange	490 m/s²			
	Number of Impacts	2 times			
Vibration Resistance*3	Vibration Acceleration Rate at Flange	49 m/s²			
Applicable SERVOPACKs	SGD7S-	1R9D		3R5D	5R4D

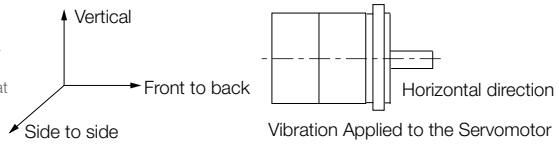
*1. A Vibration class of V15 indicates a vibration amplitude of 15 μm maximum on the Servomotor without a load at the rated motor speed.

*2. The shock resistance for shock in the vertical direction when the Servomotor is mounted with the shaft in a horizontal position is given in the above table.



Shock Applied to the Servomotor

*3. The vertical, side-to-side, and front-to-back vibration resistance for vibration in three directions when the Servomotor is mounted with the shaft in a horizontal position is given in the above table. The strength of the vibration that the Servomotor can withstand depends on the application. Always check the vibration acceleration rate that is applied to the Servomotor with the actual equipment.



Vibration Applied to the Servomotor

*4. If the surrounding air temperature will exceed 40°C, refer to the section “Applications where the Surrounding Air Temperature of the Servomotor Exceeds 40°C”.

*5. If the altitude will exceed 1,000 m, refer to the section “Applications where the Altitude of the Servomotor Exceeds 1000m”.

	Holding Torque	Nm	0.637	1.27	2.39	4.77
	Coil Resistance	Ω (at 20 °C)	96±10%		88.6±10%	76.8±10%
	Rated Current	A (at 20 °C)	0.25		0.27	0.31
	Time Required to Release Brake	ms	60		80	
	Time Required to Brake	ms	100			
Allowable Load Moment of Inertia (Motor Moment of Inertia Ratio)	Standard		15 times	10 times	12 times	6 times
	With External Regenerative Resistor or Dynamic Brake Resistor Connected		25 times		15 times	12 times
Allowable Shaft Load *5	LF	mm	25		35	
	Allowable Radial Load	N	245		392	490
	Allowable Thrust Load	N	74		147	

Note: The values in parentheses are for Servomotors with holding brakes.

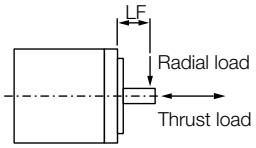
1. These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C. The values for other items are at 20°C. These are typical values.

2. The rated torques are the continuous allowable torque values at a surrounding air temperature of 40°C with an aluminum heat sink of the dimensions given in the table.

3. This does not apply to the shaft opening. Protective structure specifications apply only when the special cable is used.

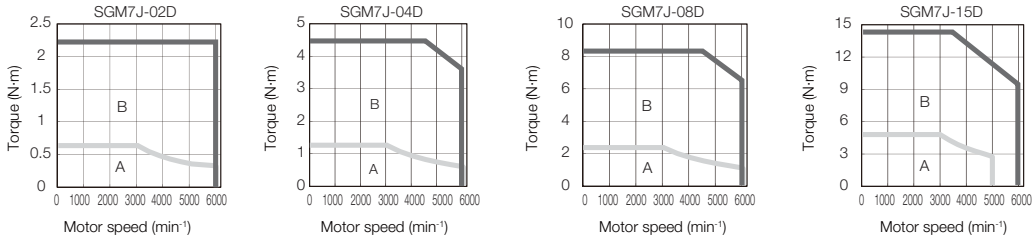
4. Observe the following precautions if you use a Servomotor with a holding brake.
   - The holding brake cannot be used to stop the Servomotor.
   - The time required to release the brake and the time required to brake depend on which discharge circuit is used. Confirm that the operation delay time is appropriate for the actual equipment.
   - The 24-VDC power supply is not provided by Yaskawa.

5. The allowable shaft loads are illustrated in the following figure. Design the mechanical system so that the thrust and radial loads applied to the Servomotor shaft end during operation do not exceed the values given in the table.



Motor speed-torque characteristics

A : Continuous duty zone
B : Intermittent duty zone

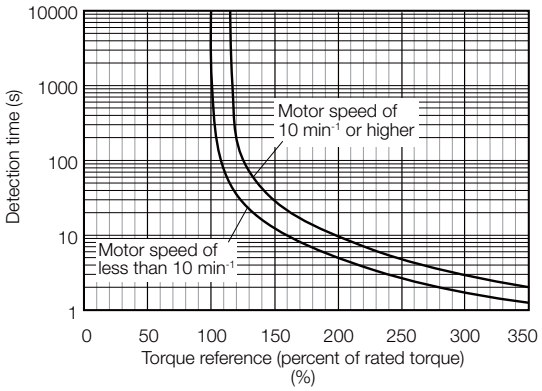


Notes:

1. These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C. These are typical values.
2. The characteristics in the intermittent duty zone depend on the power supply voltage. The intermittent duty zones in the graphs show the characteristics when a three-phase, 400-VAC power supply voltage is used.
3. If the effective torque is within the allowable range for the rated torque, the Servomotor can be used within the intermittent duty zone.
4. If you use a Servomotor Main Circuit Cable that exceeds 20 m, the intermittent duty zone in the torque-motor speed characteristics will become smaller because the voltage drop increases.

Servomotor overload protection characteristics

The overload detection level is set for hot start conditions with a Servomotor surrounding air temperature of 40°C.



Note:

The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher.

Use the Servomotor so that the effective torque remains within the continuous duty zone given in Motor Speed-Torque Characteristics above.

Load moment of inertia

The load moment of inertia indicates the inertia of the load. The larger the load moment of inertia, the worse the response. If the moment of inertia is too large, operation will become unstable.
The allowable size of the load moment of inertia (J_L) for the Servomotor is restricted. Refer to Ratings of Rotary Serovmotors SGM7J. This value is provided strictly as a guideline and results depend on Servomotor driving conditions.

An Overvoltage Alarm (A.400) is likely to occur during deceleration if the load moment of inertia exceeds the allowable load moment of inertia. SERVOPACKs with a built-in regenerative resistor may generate a Regenerative Overload Alarm (A.320). Perform one of the following steps if this occurs.

- Reduce the torque limit.
- Reduce the deceleration rate.
- Reduce the maximum motor speed.
- Install an external regenerative resistor if the alarm cannot be cleared using the above steps.

Servomotor heat dissipation conditions

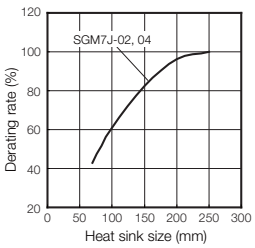
The Servomotor ratings are the continuous allowable values at a surrounding air temperature of 40°C when a heat sink is installed on the Servomotor. If the Servomotor is mounted on a small device component, the Servomotor temperature may rise considerably because the surface for heat dissipation becomes smaller. Refer to the following graphs for the relation between the heat sink size and derating rate.

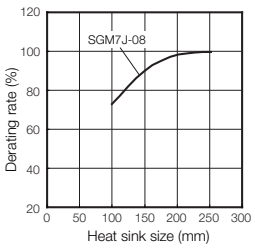
Also, change the overload warning and overload alarm detection timing in advance based on the overload detection level of the motor. Refer to the Servomotor Overload Protection Characteristics.

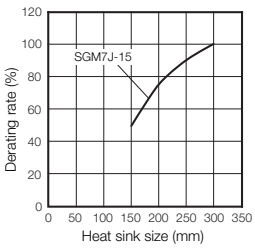
Note:
The derating rates are applicable only when the average motor speed is less than or equal to the rated motor speed.
If the average motor speed exceeds the rated motor speed, consult with your Yaskawa representative.

Important:

The actual temperature rise depends on how the heat sink (i.e., the Servomotor mounting section) is attached to the installation surface, what material is used for the Servomotor mounting section, and the motor speed. Always check the Servomotor temperature with the actual equipment.







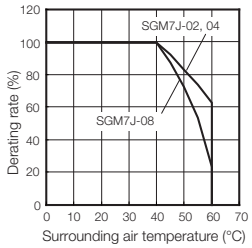
See Servomotor Ratings for more information.

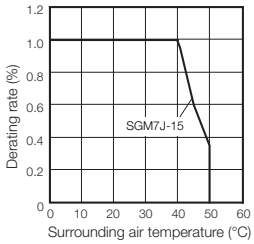
Applications where the surrounding air temperature of the servomotor exceeds 40°C

The Servomotor ratings are the continuous allowable values at a surrounding air temperature of 40°C. If you use a Servomotor at a surrounding air temperature that exceeds 40°C (60°C max.), apply a suitable derating rate from the following graphs.

Also, change the overload warning and overload alarm detection timing in advance based on the overload detection level of the motor. Refer to the Servomotor Overload Protection Characteristics.

Note:
1. Use the combination of the SERVOPACK and Servomotor so that the derating conditions are satisfied for both the SERVOPACK and Servomotor.
2. The derating rates are applicable only when the average motor speed is less than or equal to the rated motor speed. If the average motor speed exceeds the rated motor speed, consult with your Yaskawa representative.





Applications where the altitude of the servomotor exceeds 1,000 m

The Servomotor ratings are the continuous allowable values at an altitude of 1,000 m or less. If you use a Servomotor at an altitude that exceeds 1,000 m (2,000 m max.), the heat dissipation effect of the air is reduced. Apply the appropriate derating rate from the following graphs.

Also, change the overload warning and overload alarm detection timing in advance based on the overload detection level of the motor. Refer to the Servomotor Overload Protection Characteristics.

Note:
1. Use the combination of the SERVOPACK and Servomotor so that the derating conditions are satisfied for both the SERVOPACK and Servomotor.
2. The derating rates are applicable only when the average motor speed is less than or equal to the rated motor speed. If the average motor speed exceeds the rated motor speed, consult with your Yaskawa representative.

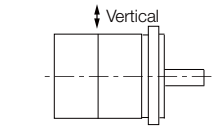
Time Rating		Continuous										
Thermal Class		B				F						
Insulation Resistance		500 VDC, 10 MΩ min.										
Withstand Voltage		1,800 VAC for 1 minute										
Excitation		Permanent magnet										
Mounting		Flange-mounted										
Drive Method		Direct drive										
Rotation Direction		Counterclockwise (CCW) for forward reference when viewed from the load side										
Vibration Class*1		V15										
Environmental Conditions	Surrounding Air Temperature	0 °C to 40 °C (With derating, usage is possible between 40 °C and 60 °C)*4										
	Surrounding Air Humidity	20 % to 80 % relative humidity (with no condensation)										
	Installation Site	• Must be indoors and free of corrosive and explosive gases. • Must be well-ventilated and free of dust and moisture. • Must facilitate inspection and cleaning. • Must have an altitude of 1,000 m or less. (With derating, usage is possible between 1,000 m and 2,000 m.)*5 • Must be free of strong magnetic fields.										
	Storage Environment	Store the Servomotor in the following environment if you store it with the power cable disconnected. Storage Temperature: -20 °C to 60 °C (with no freezing) Storage Humidity: 20 % to 80 % relative humidity (with no condensation)										
Shock Resistance*2	Impact Acceleration Rate at Flange	490 m/s²										
	Number of Impacts	2 times										
Vibration Resistance*3	Vibration Acceleration Rate at Flange	49 m/s² (Models 15A to 30D: 24.5 m/s² front to back)										14.7 m/s²
Applicable SERVOPACKs	SGD7S-	1R9D		3R5D	5R4D		8R4D	120D		170D		260D
	SGD7W-	2R6D*6	2R6D*6 or 5R4D*6	2R6D or 5R4D*6	5R4D*6	5R4D	–					

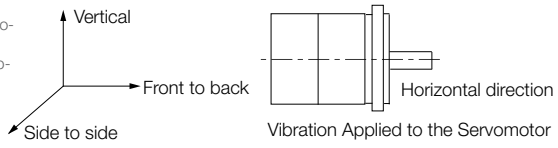
*1 A Vibration class of V15 indicates a vibration amplitude of 15 μm maximum on the Servomotor without a load at the rated motor speed.

*2 The shock resistance for shock in the vertical direction when the Servomotor is mounted with the shaft in a horizontal position is given in the above table.



Shock Applied to the Servomotor

*3 The vertical, side-to-side, and front-to-back vibration resistance for vibration in three directions when the Servomotor is mounted with the shaft in a horizontal position is given in the above table. The strength of the vibration that the Servomotor can withstand depends on the application. Always check the vibration acceleration rate that is applied to the Servomotor with the actual equipment.



Vibration Applied to the Servomotor

*4 Refer to the section "Applications where the Surrounding Air Temperature of the Servomotor Exceeds 40°C".

*5 If the altitude will exceed 1,000 m, refer to the section "Applications where the Altitude of the Servomotor Exceeds 1000m".

*6 If you use this combination, performance may not be as good, e.g., the control gain may not increase, in comparison with using a Sigma-7 Single Axis SERVOPACK.

Heat Sink Size		mm	250 × 250 × 6			300 × 300 × 12				400 × 400 × 20			
Protective Structure*3			Totally enclosed, self-cooled, IP67										Totally enclosed, separately cooled (with fan), IP22 cooled (with fan)
Holding Brake Specifications*4	Rated Voltage	V	24 VDC ± 10 %										-
	Capacity	W	6		6.5		12			10			-
	Holding Torque	Nm	0.637	1.27	2.39	3.18	7.84	7.84	10	20			-
	Coil Resistance	Ω (at 20 °C)	96±10 %		88.6±10 %		48±10 %			59			-
	Rated Current	A (at 20 °C)	0.25		0.27		0.5			0.41			-
	Time required to release Brake	ms	60		80		170			100			-
	Time required to brake	ms	100				80						-
Allowable Load Moment of Inertia (Motor Moment of Inertia Ratio)	Standard		30 times		20 times		10 times			5 times			15 times
	With External Regenerative Resistor and Dynamic Brake Resistor Connected		30 times	20 times	30 times		20 times			15 times			
Allowable Shaft Load*5	LF	mm	25		35		45			63			
	Allowable Radial Load	N	245		392		686			980	1,176		
	Allowable Thrust Load	N	74		147		196			392			

Note: The values in parentheses are for Servomotors with Holding Brakes.

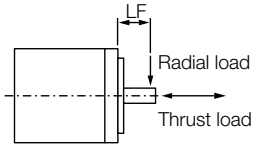
*1. For the SGM7A-02D to SGM7A-10D, these values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C. The values for other items are at 20°C. For the SGM7A-15D to SGM7A-30D, these values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 20°C. These are typical values.

*2. The rated torques are the continuous allowable torque values at a surrounding air temperature of 40°C with an aluminum heat sink of the dimensions given in the table.

*3. This does not apply to the shaft opening. Protective structure specifications apply only when the special cable is used.

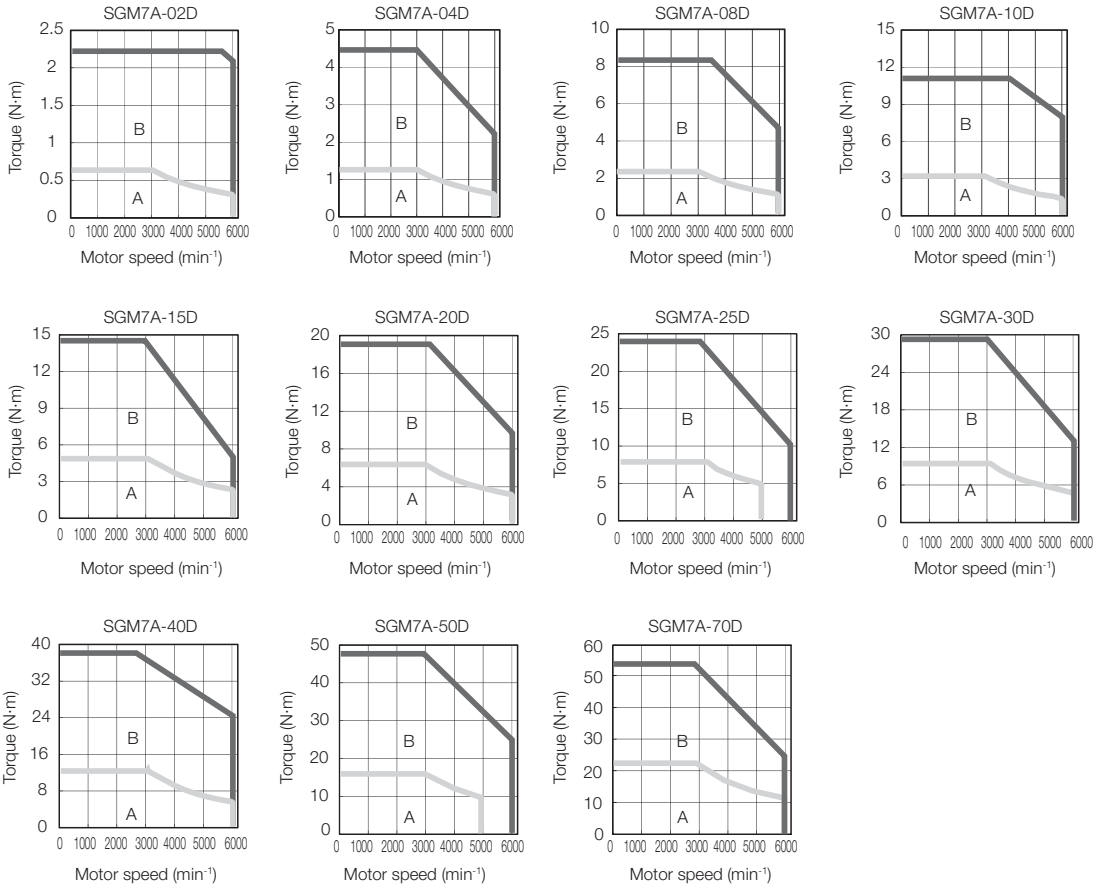
*4. Observe the following precautions if you use a Servomotor with a Holding Brake.
- The holding brake cannot be used to stop the Servomotor.
- The time required to release the brake and the time required to brake depend on which discharge circuit is used. Confirm that the operation delay time is appropriate for the actual equipment.
- The 24-VDC power supply is not provided by Yaskawa.

*5. The allowable shaft loads are illustrated in the following figure. Design the mechanical system so that the thrust and radial loads applied to the Servomotor shaft end during operation do not exceed the values given in the table.



*6. For the SGM7A-25D, the maximum motor speed for the continuous duty zone is 5,000 min-1. Use the Servomotor within the continuous duty zone for the average motor speed and effective torque.

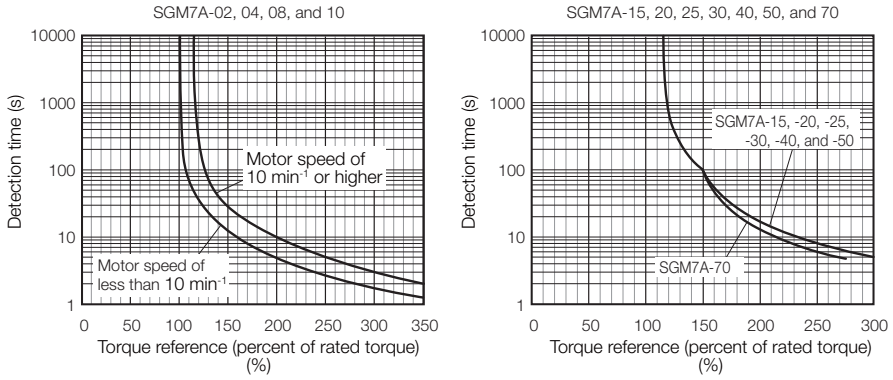
Motor speed-torque characteristics



Note:
1. For the SGM7A-02D to SGM7A-10D, these values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C.
   For the SGM7A-15D to SGM7A-30D, these values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 20°C. These are typical values.
2. The characteristics in the intermittent duty zone depend on the power supply voltage. The intermittent duty zones in the graphs show the characteristics when a three-phase, 400-VAC power supply voltage is used.
3. If the effective torque is within the allowable range for the rated torque, the Servomotor can be used within the intermittent duty zone.
4. If you use a Servomotor Main Circuit Cable that exceeds 20 m, the intermittent duty zone in the torque-motor speed characteristics will become smaller because the voltage drop increases.

Servomotor overload protection characteristics

The overload detection level is set for hot start conditions with a Servomotor surrounding air temperature of 40 °C.



Note:
The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher.
Use the Servomotor so that the effective torque remains within the continuous duty zone given in Motor Speed-Torque Characteristics.

Load moment of inertia

The load moment of inertia indicates the inertia of the load. The larger the load moment of inertia, the worse the response. If the moment of inertia is too large, operation will become unstable.

The allowable size of the load moment of inertia (J_L) for the Servomotor is restricted. Refer to Ratings of Rotary Serovmotors SGM7J. This value is provided strictly as a guideline and results depend on Servomotor driving conditions.

An Overvoltage Alarm (A.400) is likely to occur during deceleration if the load moment of inertia exceeds the allowable load moment of inertia. SERVOPACKs with a built-in regenerative resistor may generate a Regenerative Overload Alarm (A.320). Perform one of the following steps if this occurs.

- Reduce the torque limit.
- Reduce the deceleration rate.
- Reduce the maximum motor speed.
- Install an external regenerative resistor if the alarm cannot be cleared using the above steps.

Servomotor heat dissipation conditions

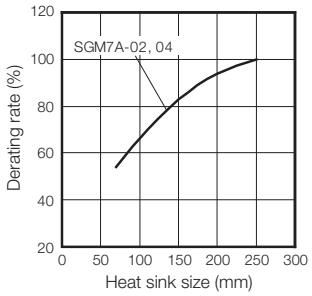
The Servomotor ratings are the continuous allowable values at a surrounding air temperature of 40°C when a heat sink is installed on the Servomotor. If the Servomotor is mounted on a small device component, the Servomotor temperature may rise considerably because the surface for heat dissipation becomes smaller. Refer to the following graphs for the relation between the heat sink size and derating rate.

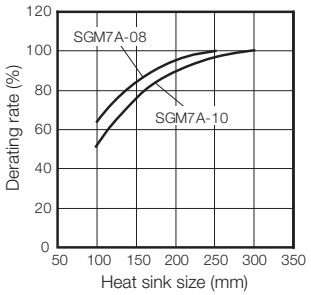
Also, change the overload warning and overload alarm detection timing in advance based on the overload detection level of the motor. Refer to the section Servomotor Overload Protection Characteristics.

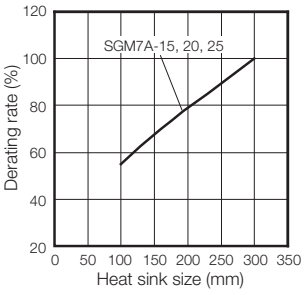
Note:
The derating rates are applicable only when the average motor speed is less than or equal to the rated motor speed.
If the average motor speed exceeds the rated motor speed, consult with your Yaskawa representative.

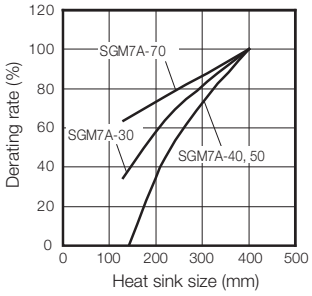
Important:

The actual temperature rise depends on how the heat sink (i.e., the Servomotor mounting section) is attached to the installation surface, what material is used for the Servomotor mounting section, and the motor speed. Always check the Servomotor temperature with the actual equipment.









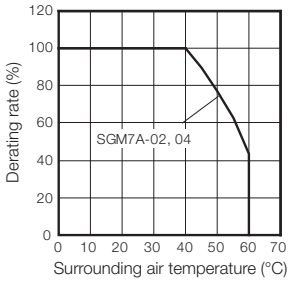
See Servomotor Ratings for more information.

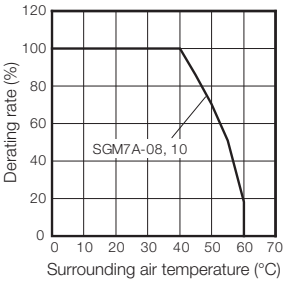
Applications where the surrounding air temperature of the servomotor exceeds 40°C

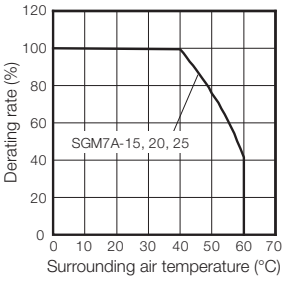
The Servomotor ratings are the continuous allowable values at a surrounding air temperature of 40°C. If you use a Servomotor at a surrounding air temperature that exceeds 40°C (60°C max.), apply a suitable derating rate from the following graphs.

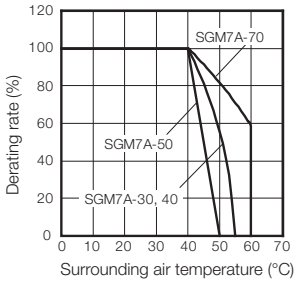
Also, change the overload warning and overload alarm detection timing in advance based on the overload detection level of the motor. Refer to the section Servomotor Overload Protection Characteristics.

Note:
1. Use the combination of the SERVOPACK and Servomotor so that the derating conditions are satisfied for both the SERVOPACK and Servomotor.
2. The derating rates are applicable only when the average motor speed is less than or equal to the rated motor speed. If the average motor speed exceeds the rated motor speed, consult with your Yaskawa representative.









Applications where the altitude of the servomotor exceeds 1,000 m

The Servomotor ratings are the continuous allowable values at an altitude of 1,000 m or less. If you use a Servomotor at an altitude that exceeds 1,000 m (2,000 m max.), the heat dissipation effect of the air is reduced. Apply the appropriate derating rate from the following graphs.

Also, change the overload warning and overload alarm detection timing in advance based on the overload detection level of the motor. Refer to the section Servomotor Overload Protection Characteristics.

Note:
1. Use the combination of the SERVOPACK and Servomotor so that the derating conditions are satisfied for both the SERVOPACK and Servomotor.
2. The derating rates are applicable only when the average motor speed is less than or equal to the rated motor speed. If the average motor speed exceeds the rated motor speed, consult with your Yaskawa representative.

7	24-bit absolute
F	24-bit incremental

5th digit - Design Revision Order

Code	Specification
F	Standard Model
R*3	High-speed Model

6th digit - Shaft End

Code	Specification
2	Straight without key (450 W, 1.8 kW, 2.9 kW)
6	Straight with key and tap (450 W, 1.8 kW, 2.9 kW)
S*2	Straight without key (850 W, 1.3 kW)
K*2	Straight with key and tap (850 W, 1.3 kW)

7th digit - Options

Code	Specification
1	Without options
C	With holding brake (24 VDC)
F	With dust seal
H	With dust seal and holding brake (24 VDC)

*1 Please contact your Yaskawa representative about availability.
*2 The shaft end codes are different for 850 kW and 1.3 kW Servomotors.
The shaft diameter for 850 W Servomotors is 19 mm.
The shaft diameter for 1.3 kW Servomotors is 22 mm.
*3 Available up to 4.4 kW.

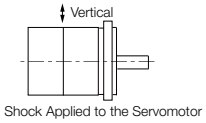
Specifications and ratings

Specifications

Voltage			400 V									
Model SGM7G-			**05D**	**09D**	**13D**	**20D**	**30D**	**44D**	**55D**	**75D**	**1AD**	**1ED**
Time Rating			Continuous									
Thermal Class			F									
Insulation Resistance			500 VDC, 10 MΩ min.									
Withstand Voltage			1,800 VAC for 1 minute									
Excitation			Permanent magnet									
Mounting			Flange-mounted									
Drive Method			Direct drive									
Rotation Direction			Counterclockwise (CCW) for forward reference when viewed from the load side									
Vibration Class*1			V15									
Environmental Conditions	Surrounding Air Temperature		0 °C to 40 °C (With derating, usage is possible between 40 °C and 60 °C)*4									
	Surrounding Air Humidity		20% to 80% relative humidity (with non-condensing)									
	Installation Site		• Must be indoors and free of corrosive and explosive gases. • Must be well-ventilated and free of dust and moisture. • Must facilitate inspection and cleaning. • Must have an altitude of 1,000 m or less. (With derating, usage is possible between 1,000 m and 2,000 m.)*5 • Must be free of strong magnetic fields.									
	Storage Environment		Store the Servomotor in the following environment if you store it with the power cable disconnected. Storage Temperature: -20 °C to 60 °C (with no freezing) Storage Humidity: 20 % to 80% relative humidity (non-condensing)									
Shock Resistance*2	Impact Acceleration Rate at Flange		490 m/s²									
	Number of Impacts		2 times									
Vibration Resistance*3	Vibration Acceleration Rate at Flange		49 m/s² (24.5 m/s² front to back)						24.5 m/s²			
Applicable SERVOPACKs	When using a Standard Servomotor	SGD7S-	1R9D	3R5D	5R4D	8R4D	120D	170D	210D	260D	280D	370D
		SGD7W-	2R6D*6 or 5R4D*6	5R4D*6	5R4D				–			
	When using a High-speed Servomotor	SGD7S-	3R5D	5R4D	8R4D	120D	170D	210D	–			
		SGD7W-	2R6D or 5R4D*6	5R4D	–							

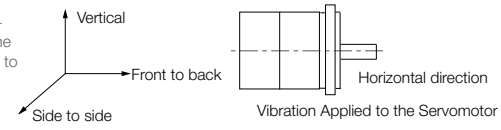
*1. A vibration class of V15 indicates a vibration amplitude of 15 μm maximum on the Servomotor without a load at the rated motor speed.

*2. The shock resistance for shock in the vertical direction when the Servomotor is mounted with the shaft in a horizontal position is given in the above table.



Shock Applied to the Servomotor

*3. The vertical, side-to-side, and front-to-back vibration resistance for vibration in three directions when the Servomotor is mounted with the shaft in a horizontal position is given in the above table. The strength of the vibration that the Servomotor can withstand depends on the application. Always check the vibration acceleration rate that is applied to the Servomotor with the actual equipment.



Vibration Applied to the Servomotor

*4. If the surrounding air temperature will exceed 40°C, refer to the section “Applications where the Surrounding Air Temperature of the Servomotor Exceeds 40°C”.

*5. If the altitude will exceed 1,000 m, refer to the section “Applications where the Altitude of the Servomotor Exceeds 1000m”.

*6. If you use this combination, performance may not be as good, e.g., the control gain may not increase, in comparison with using a Sigma-7S SERVOPACK.

Rated Angular Acceleration Rate *1		rad/s^2	8,590 (7,990)	3,880 (3,370)	4,190 (3,790)	4,420 (4,090)	4,040 (3,450)	4,210 (3,770)	3,930 (3,610)	3840 (3,610)	2,890 (2,680)	3,150 (2,800)
Heat Sink Size		mm	250 × 250 × 6 (aluminium)	400 × 400 × 20 (steel)			550 × 550 × 30 (steel)				650 × 650 × 35 (steel)	
Protective Structure *3			Totally enclosed, self-cooled, IP67									
Holding Brake Specifications *4	Rated Voltage	V	24 VDC 0 / +10%									
	Capacity	W	10				18.5		25		32	35
	Holding Torque	Nm	4.5	12.7	19.6		43.1		72.6		84.3	114.6
	Coil Resistance	Ω (at 20 °C)	56	59			31		23		18	17
	Rated Current	A (at 20 °C)	0.43	0.41			0.77		1.05		1.33	1.46
	Time Required to Release Brake	ms	100					170				250
	Time Required to Brake	ms	80				100		80			
Allowable Load Moment of Inertia (Motor Moment of Inertia Ratio)	Standard		15 times	5 times				10 times				
	With External Regenerative Resistor and Dynamic Brake Resistor Connected		15 times	10 times								
Allowable Shaft Load *5	LF	mm	40	58			79		113		116	
	Allowable Radial Load	N	490		686	980	1,470		1,764		4,998	
	Allowable Thrust Load	N	98		343	392	490		588		2,156	

Note:
The values in parentheses are for Servomotors with Holding Brakes.

*1. These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 20°C. These are typical values.

*2. The rated torques are the continuous allowable torque values at a surrounding air temperature of 40°C with an aluminum or steel heat sink of the dimensions given in the table.

*3. This does not apply to the shaft opening. Protective structure specifications apply only when the special cable is used.

*4. Observe the following precautions if you use a Servomotor with a Holding Brake.

- The holding brake cannot be used to stop the Servomotor.
- The time required to release the brake and the time required to brake depend on which discharge circuit is used. Confirm that the operation delay time is appropriate for the actual equipment.
- The 24-VDC power supply is not provided by Yaskawa.

*5. The allowable shaft loads are illustrated in the following figure. Design the mechanical system so that the thrust and radial loads applied to the Servomotor shaft end during operation do not exceed the values given in the table.

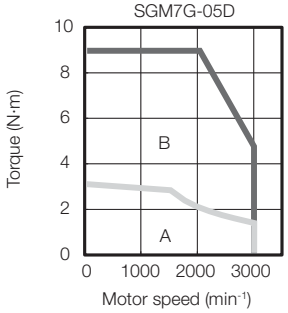
Motor speed-torque characteristics

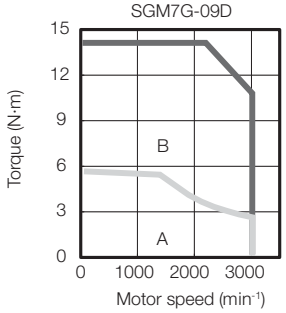
Standard servomotors

A : Continuous duty zone
B : Intermittent duty zone

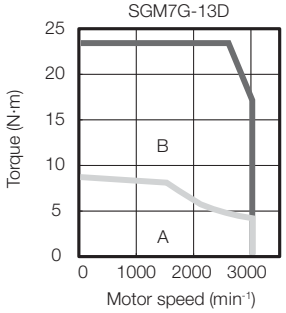
SGM7G-05D



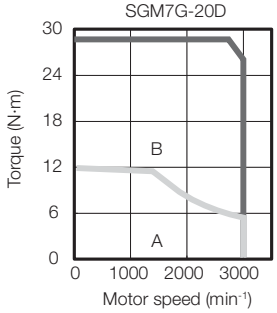
SGM7G-09D



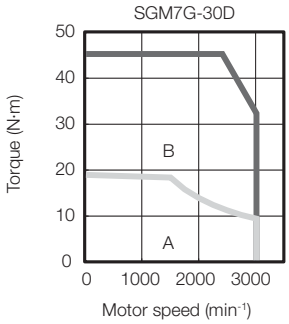
SGM7G-13D



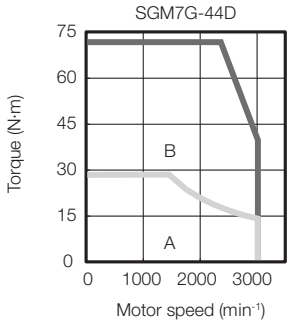
SGM7G-20D



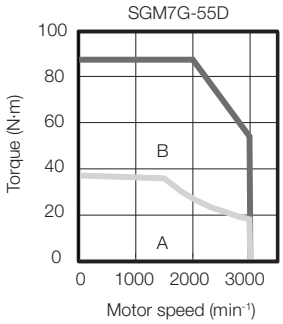
SGM7G-30D



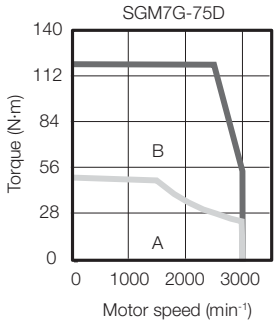
SGM7G-44D



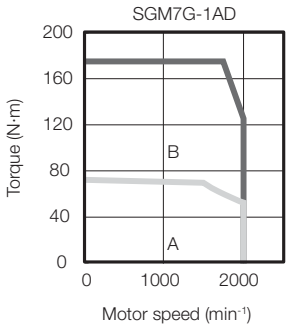
SGM7G-55D



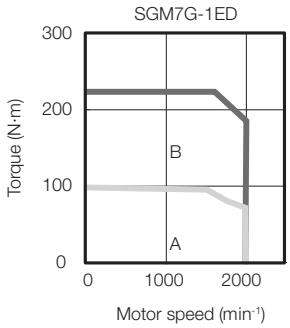
SGM7G-75D



SGM7G-1AD



SGM7G-1ED

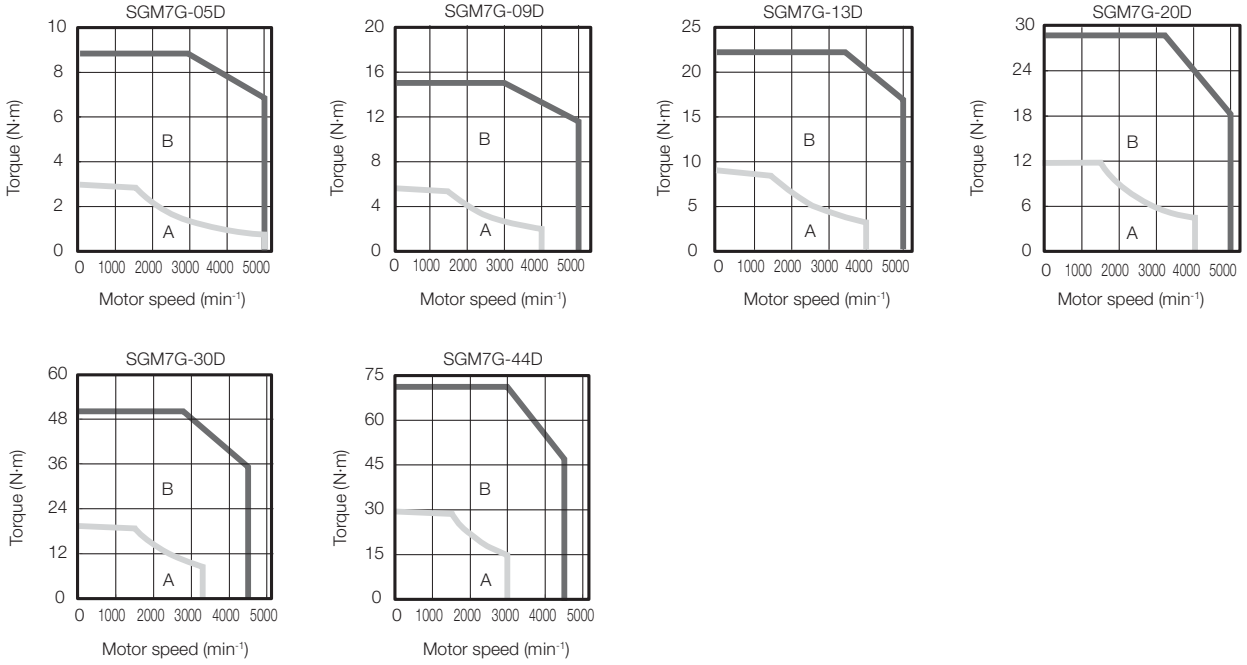


Note:

1. These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 20°C. These are typical values.
2. The characteristics in the intermittent duty zone depend on the power supply voltage. The intermittent duty zone in the graphs show the characteristics when a three-phase, 400-VAC power supply voltage is used.
3. If the effective torque is within the allowable range for the rated torque, the Servomotor can be used within the intermittent duty zone.
4. If you use a Servomotor Main Circuit Cable that exceeds 20 m, the intermittent duty zone in the torque-motor speed characteristics will become smaller because the voltage drop increases.

High-speed servomotors

A : Continuous duty zone
B : Intermittent duty zone



Note:

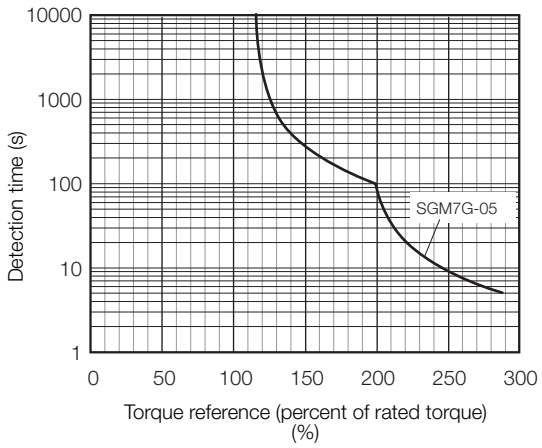
1. These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 20°C. These are typical values.
2. The characteristics in the intermittent duty zone depend on the power supply voltage. The intermittent duty zone in the graphs show the characteristics when a three-phase, 400-VAC power supply voltage is used.
3. If the effective torque is within the allowable range for the rated torque, the Servomotor can be used within the intermittent duty zone.
4. If you use a Servomotor Main Circuit Cable that exceeds 20 m, the intermittent duty zone in the torque-motor speed characteristics will become smaller because the voltage drop increases.

Servomotor overload protection characteristics

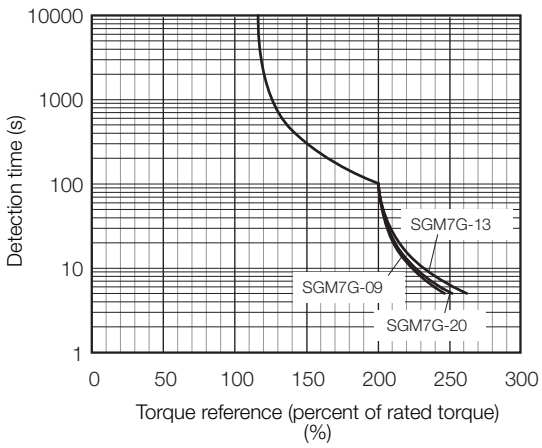
The overload detection level is set for hot start conditions with a Servomotor surrounding air temperature of 40 °C.

Standard servomotors

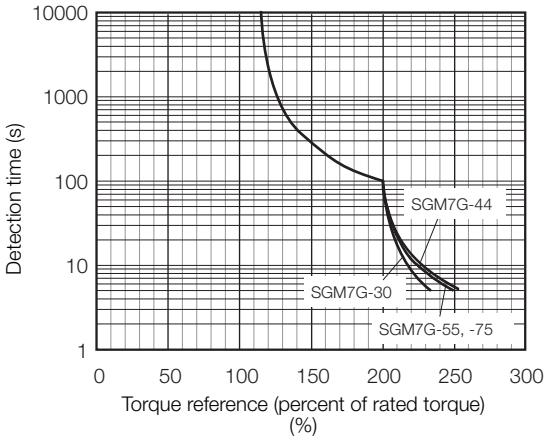
SGM7G-05



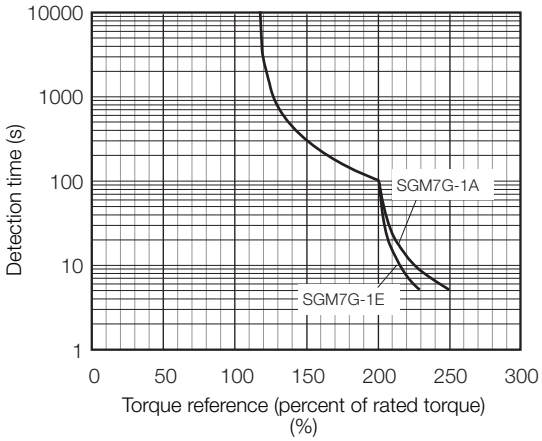
SGM7G-09, -13, and -20



SGM7G-30, -44, -55, and -75



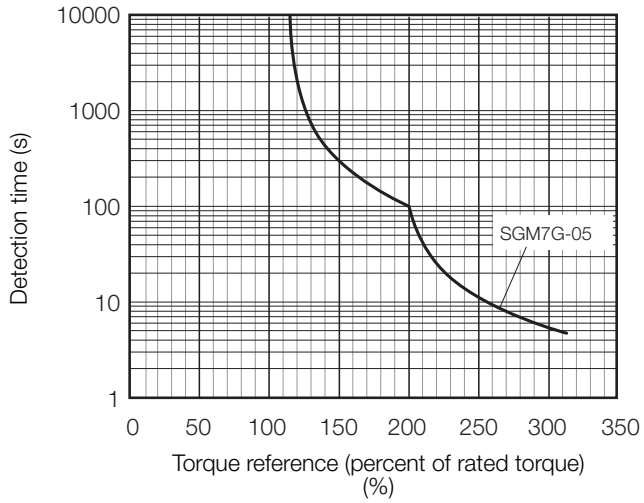
SGM7G-1A and -1E



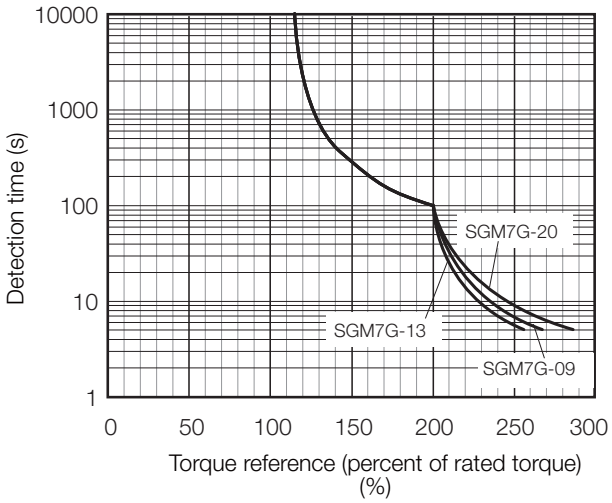
Note:
The overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher. Use the Servomotor so that the effective torque remains within the continuous duty zone given in Motor Speed-Torque Characteristics.

High-speed servomotors

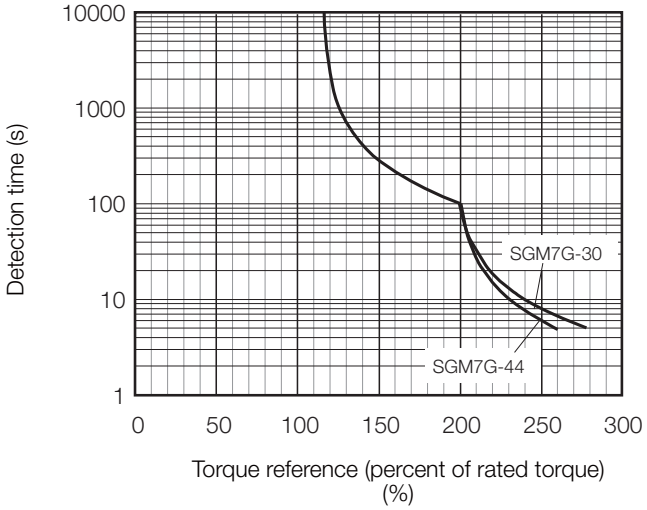
SGM7G-05



SGM7G-09, -13, and -20



SGM7G-30 and -44



Note:
The overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher. Use the Servomotor so that the effective torque remains within the continuous duty zone given in Motor Speed-Torque Characteristics.

Load moment of inertia

The load moment of inertia indicates the inertia of the load. The larger the load moment of inertia, the worse the response. If the moment of inertia is too large, operation will become unstable.
The allowable size of the load moment of inertia (JL) for the Servomotor is restricted. Refer to Ratings of Rotary Serovmotors SGM7J. This value is provided strictly as a guideline and results depend on Servomotor driving conditions.
An Overvoltage Alarm (A.400) is likely to occur during deceleration if the load moment of inertia exceeds the allowable load moment of inertia. SERVOPACKs with a built-in regenerative resistor may generate a Regenerative Overload Alarm (A.320).

Perform one of the following steps if this occurs.

- Reduce the torque limit.
- Reduce the deceleration rate.
- Reduce the maximum motor speed.
- Install an external regenerative resistor if the alarm cannot be cleared using the above steps.

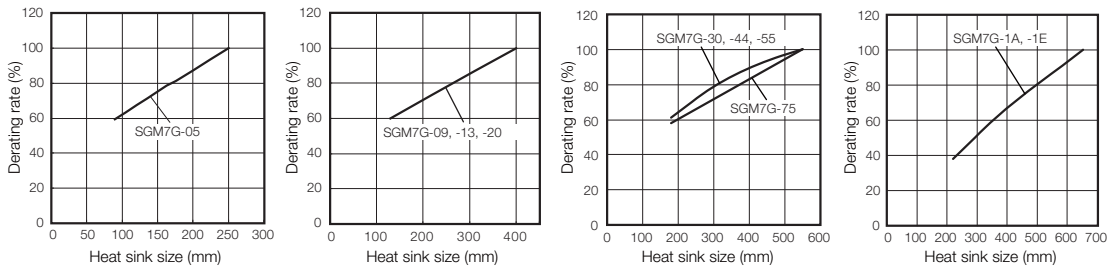
Servomotor heat dissipation conditions

The Servomotor ratings are the continuous allowable values at a surrounding air temperature of 40°C when a heat sink is installed on the Servomotor. If the Servomotor is mounted on a small device component, the Servomotor temperature may rise considerably because the surface for heat dissipation becomes smaller. Refer to the following graphs for the relation between the heat sink size and derating rate.

Also, change the overload warning and overload alarm detection timing in advance based on the overload detection level of the motor. Refer to the section Servomotor Overload Protection Characteristics.

Note:
The derating rates are applicable only when the average motor speed is less than or equal to the rated motor speed.
If the average motor speed exceeds the rated motor speed, consult with your Yaskawa representative.

Important:
The actual temperature rise depends on how the heat sink (i. e., the Servomotor mounting section) is attached to the installation surface, what material is used for the Servomotor mounting section, and the motor speed. Always check the Servomotor temperature with the actual equipment.



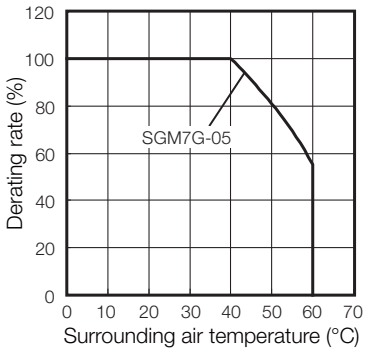
See Servomotor Ratings for more information.

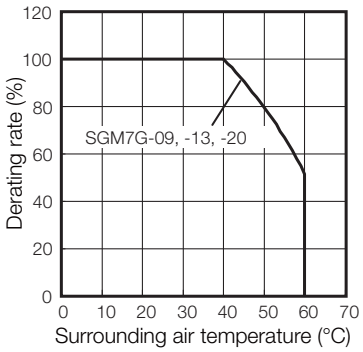
Applications where the surrounding air temperature of the servomotor exceeds 40°C

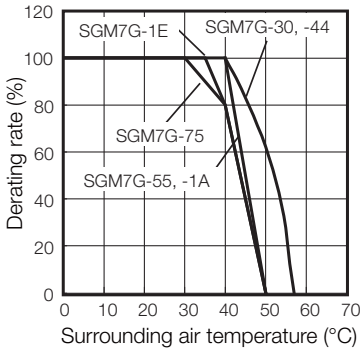
The Servomotor ratings are the continuous allowable values at a surrounding air temperature of 40°C. If you use a Servomotor at a surrounding air temperature that exceeds 40°C (60°C max.), apply a suitable derating rate from the following graphs.

Also, change the overload warning and overload alarm detection timing in advance based on the overload detection level of the motor. Refer to the section Servomotor Overload Protection Characteristics.

Note:
1. Use the combination of the SERVOPACK and Servomotor so that the derating conditions are satisfied for both the SERVOPACK and Servomotor.
2. The derating rates are applicable only when the average motor speed is less than or equal to the rated motor speed. If the average motor speed exceeds the rated motor speed, consult with your Yaskawa representative.







Applications where the altitude of the servomotor exceeds 1,000 m

The Servomotor ratings are the continuous allowable values at an altitude of 1,000 m or less. If you use a Servomotor at an altitude that exceeds 1,000 m (2,000 m max.), the heat dissipation effect of the air is reduced. Apply the appropriate derating rate from the following graphs.

Also, change the overload warning and overload alarm detection timing in advance based on the overload detection level of the motor. Refer to the section Servomotor Overload Protection Characteristics.

Note:
1. Use the combination of the SERVOPACK and Servomotor so that the derating conditions are satisfied for both the SERVOPACK and Servomotor.
2. The derating rates are applicable only when the average motor speed is less than or equal to the rated motor speed. If the average motor speed exceeds the rated motor speed, consult with your Yaskawa representative.

714	714 mm

8th digit - Design Revision Order

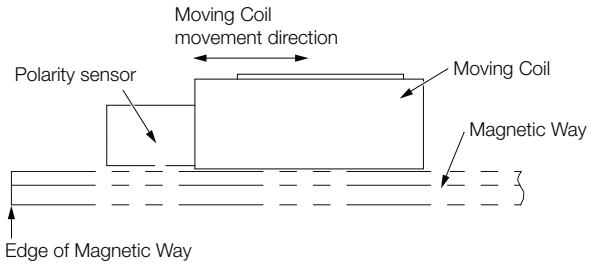
Code	Specification
A	Standard Model

Note: This information is provided to explain model numbers. It is not meant to imply that models are available for all combinations of codes.

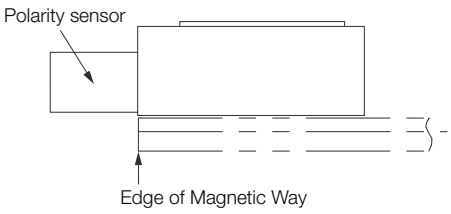
Precautions on moving coils with polarity sensors

Note:
When you use a Moving Coil with a Polarity Sensor, the Magnetic Way must cover the bottom of the polarity sensor. Refer to the example that shows the correct installation.
When determining the length of the Moving Coil's stroke or the length of the Magnetic Way, consider the total length (L) of the Moving Coil and the polarity sensor. Refer to the following table.

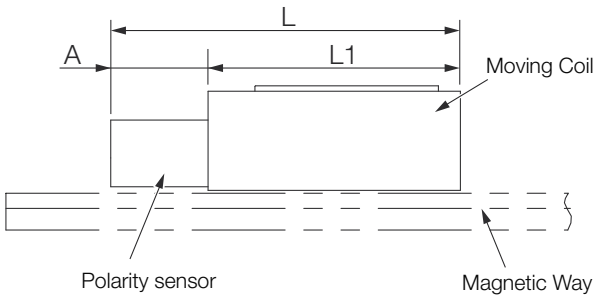
Correct installation



Incorrect installation



Total length of moving coil with polarity sensor



Moving Coil Model SGLFW2-	Length of Moving Coil, L1 (mm)	Length of Polarity Sensor, A (mm)	Total Length, L (mm)
30D070AS	70	27	97
30D120AS	125		152
30D230AS	230		257
45D200AS	205	32	237
45D380AS	384		416
90D200AS	205		237
90D380AS	384		416

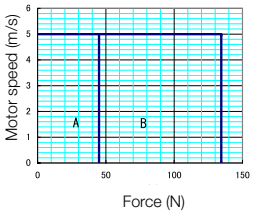
*1. These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C. The values for other items are at 20°C. These are typical values.

*2. The rated forces are the continuous allowable force values at a ambient temperature of 40°C with an aluminum heat sink of the dimensions given in the following table.
Heat Sink Dimensions:
- 150 mm × 100 mm × 10 mm: SGLFW2-30D070A
- 254 mm × 254 mm × 25 mm: SGLFW2-30D120A and -30D230A
- 400 mm × 500 mm × 40 mm: SGLFW2-45D200A and -45D380A

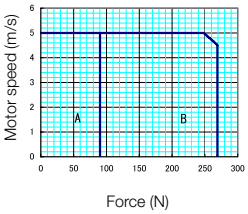
Force-motor speed characteristics

A : Continuous duty zone ——— With three-phase 400-V input
B : Intermittent duty zone - - - - - - - - With three-phase 400-V input

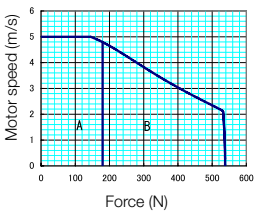
SGLFW2-30D070A



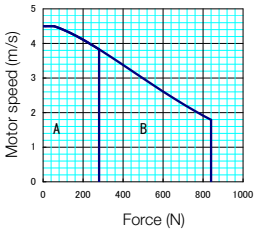
SGLFW2-30D120A



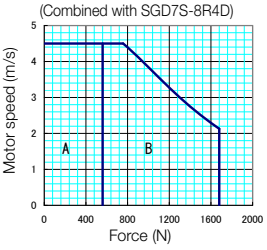
SGLFW2-30D230A



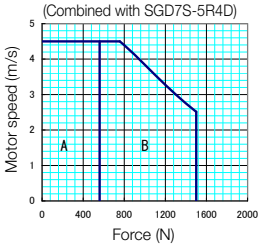
SGLFW2-45D200A



SGLFW2-45D380A
(Combined with SGD7S-8R4D)



SGLFW2-45D380A
(Combined with SGD7S-5R4D)



Notes:

1. These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C. These are typical values.
2. The characteristics in the intermittent duty zone depend on the power supply voltage.
3. If the effective force is within the allowable range for the rated force, the Servomotor can be used within the intermittent duty zone.
4. If you use a Servomotor Main Circuit Cable that exceeds 20 m, the intermittent duty zone in the torque-motor speed characteristics will become smaller because the voltage drop increases.

Applicable SERVOPACKs	SGD7S-	5R4D	120D	170D	170D	260D*3

*1. These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C. The values for other items are at 20°C. These are typical values.

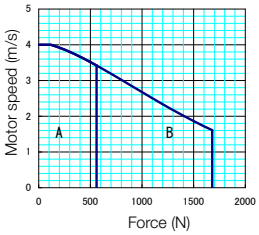
*2. The rated forces are the continuous allowable force values at a ambient air temperature of 40°C with an aluminum heat sink of the dimensions given in the following table.
Heat Sink Dimensions:
- 400 mm × 500 mm × 25 mm: SGLFW2-90D200A
- 609 mm × 762 mm × 40 mm: SGLFW2-90D380A
- 900 mm × 762 mm × 40 mm: SGLFW2-90D560A and -1DD380A
- 1400 mm x 900 mm x 40 mm: SGLFW2-1DD560A

*3. Contact your Yaskawa representative for information on these servopack models.

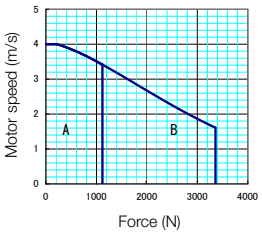
Force-motor speed characteristics

A : Continuous duty zone ———— With three-phase 400-V input
B : Intermittent duty zone - - - - - - - - With three-phase 400-V input

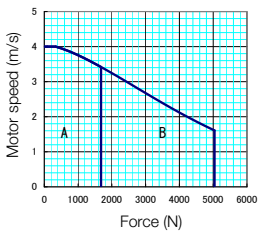
SGLFW2-90D200A



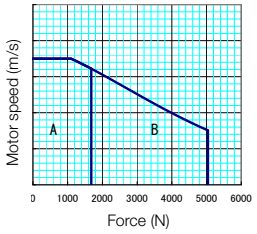
SGLFW2-90D380A



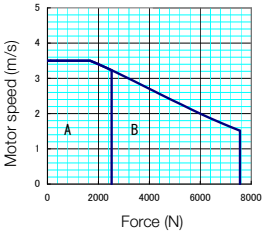
SGLFW2-90D560A



SGLFW2-1DD380A



SGLFW2-1DD560A



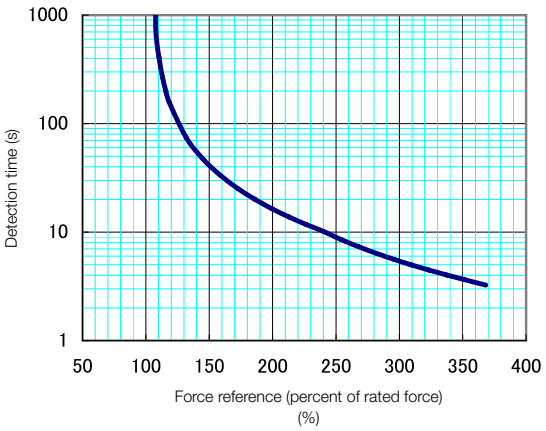
Notes:

1. These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C. These are typical values.
2. The characteristics in the intermittent duty zone depend on the power supply voltage.
3. If the effective force is within the allowable range for the rated force, the Servomotor can be used within the intermittent duty zone.
4. If you use a Servomotor Main Circuit Cable that exceeds 20 m, the intermittent duty zone in the torque-motor speed characteristics will become smaller because the voltage drop increases.

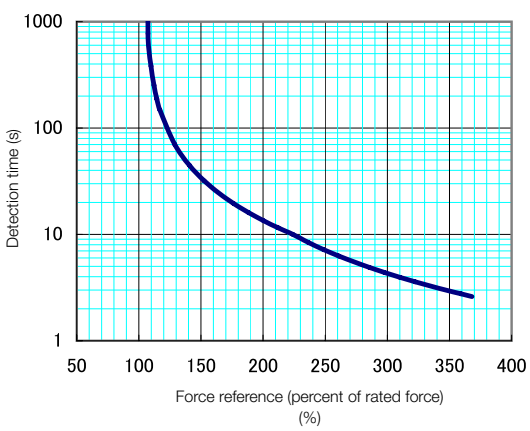
Servomotor overload protection characteristics

The overload detection level is set for hot start conditions with a Servomotor ambient air temperature of 40°C.

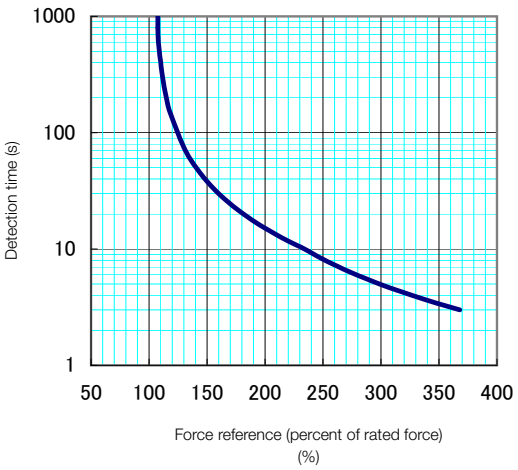
SGLFW2-30D070A



SGLFW2-30D120A and -230A



SGLFW2-45D, -90D, and -1DD

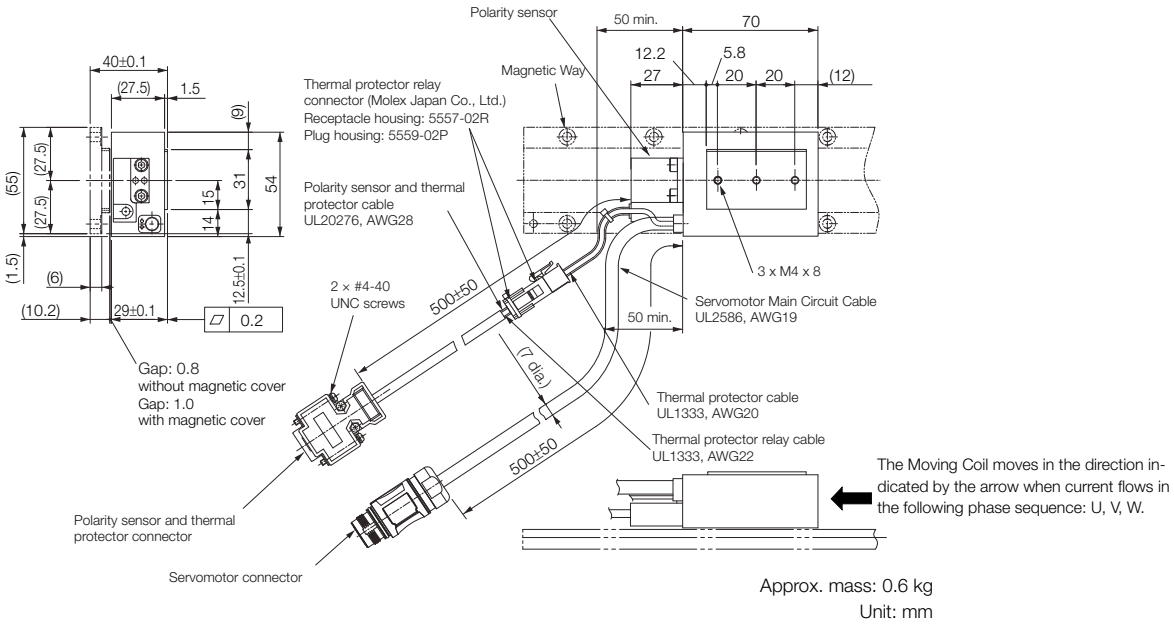


Notes:
The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher. Use the Servomotor so that the effective force remains within the continuous duty zone given in Force-Motor Speed Characteristics.

External dimensions

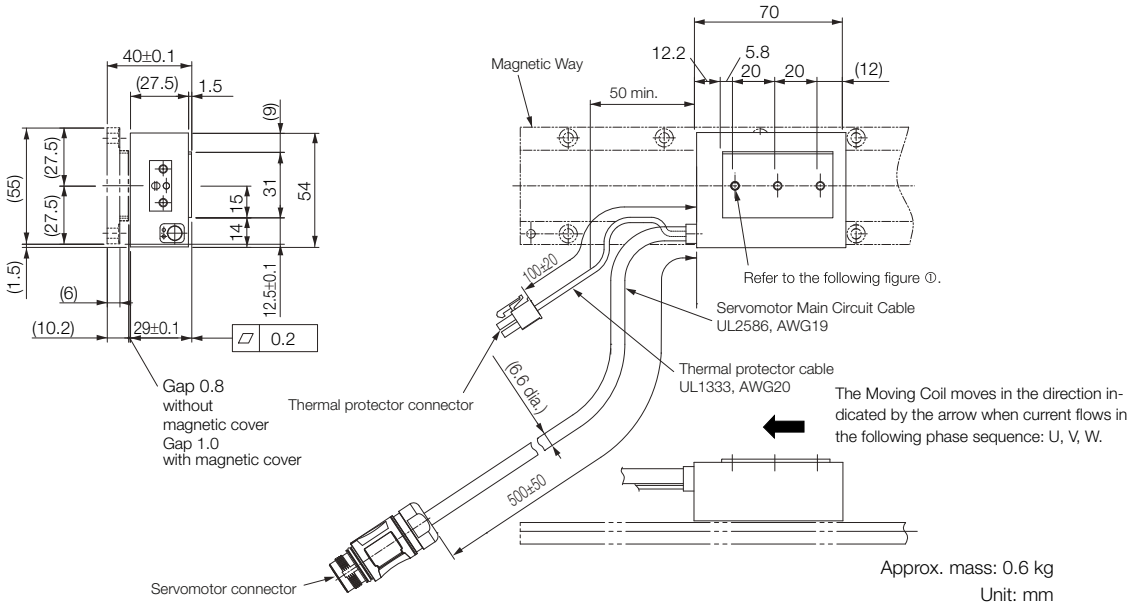
SGLFW2-30

Moving Coil with Polarity Sensor: SGLFW2-30D070AS



Approx. mass: 0.6 kg
Unit: mm

Moving Coil without Polarity Sensor: SGLFW2-30D070AT



Approx. mass: 0.6 kg
Unit: mm

Moving Coil Model SGLFM2-	L1	L2	L3	Approx. Mass [kg]

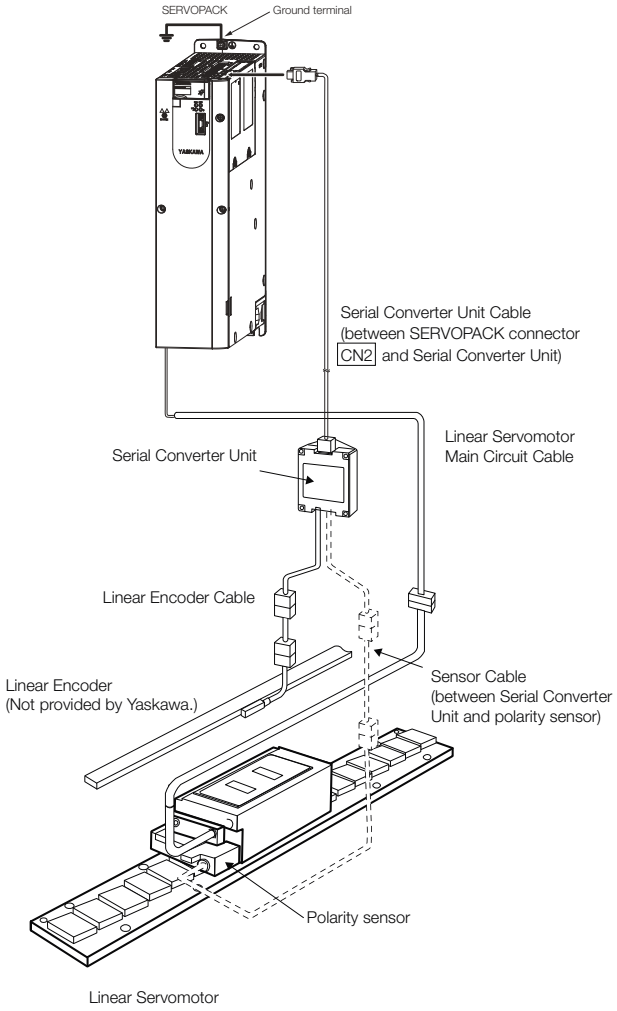
System configurations



* You can connect directly to an absolute linear encoder.

Notes:

1. The above system configurations are for SGLFW2 Servomotors with F-Type Iron Cores (with thermal protectors). Refer to the manual for the Linear Servomotor for configurations with other models.
2. Refer to the following manual for the following information.
   - Cable dimensional drawings and cable connection specifications
   - Order numbers and specifications of individual connectors for cables
   - Order numbers and specifications for wiring materials

Sigma-7-Series AC Servo Drive Peripheral Device Selection Manual.

Power cables for linear servomotors

Linear Motor Model	Cable & connector type	Length	Order No.	Specification
SGLFW2-30D070 to SGLFW2-45D380	Flexible Power cable 4 x 1.5 mm² with M17 connector	3 m	JZSP-C7M143-03-E-G#	
		5 m	JZSP-C7M143-05-E-G#

Overvoltage Category			III									

* This is the net value at the rated load.

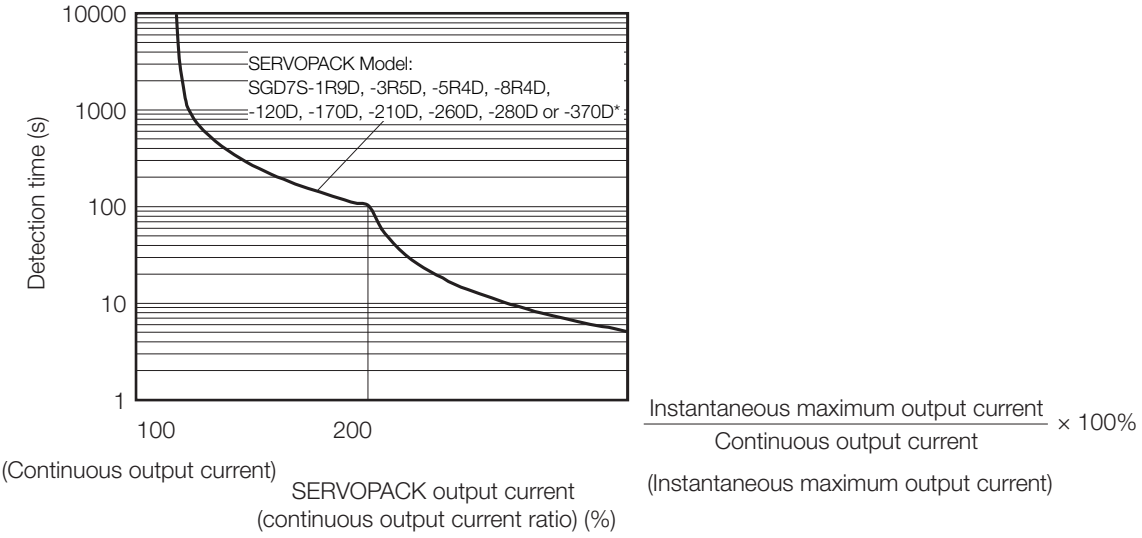
SERVOPACK overload protection characteristics

The overload detection level is set for hot start conditions with a SERVOPACK surrounding air temperature of 55°C*.
An overload alarm (A.710 or A.720) will occur if overload operation that exceeds the overload protection characteristics shown in the following diagram (i.e., operation on the right side of the applicable line) is performed.
The actual overload detection level will be the detection level of the connected SERVOPACK or Servomotor that has the lower overload protection characteristics. In most cases, that will be the overload protection characteristics of the Servomotor.



Note:
The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher.
For a Yaskawa-specified combination of SERVOPACK and Servomotor, maintain the effective torque within the continuous duty zone of the torque-motor speed characteristic of the Servomotor.
* However, the range for the SGD7S-370D is -5°C to 40°C.

Specifications using EtherCAT communication reference

Item			Specification
Control Method			IGBT-based PWM control, sine wave current drive
Feedback	With Rotary Servomotor		Serial encoder: 24 bits (incremental encoder/absolute encoder)
	With Linear Servomotor		• Absolute linear encoder (The signal resolution depends on the absolute linear encoder.) • Incremental linear encoder (The signal resolution depends on the incremental linear encoder or Serial Converter Unit.)
Environmental Conditions	Surrounding Air Temperature*1		-5°C to 55°C (60°C with derating) However, the range for the SGD7S-370D is -5°C to 40°C.
	Storage Temperature		-20°C to 85°C
	Surrounding Air Humidity		95 % relative humidity max. (with no freezing or condensation)
	Storage Humidity		95 % relative humidity max. (with no freezing or condensation)
	Vibration Resistance		4.9 m/s^2
	Shock Resistance		19.6 m/s^2
	Degree of Protection		IP10
	Pollution Degree		2 • Must be no corrosive or flammable gases. • Must be no exposure to water, oil, or chemicals. • Must be no dust, salts, or iron dust.
	Altitude		1,000 m or less (above 1,000 m with derating)
	Others		Do not use the SERVOPACK in the following locations: Locations subject to static electricity noise, strong electromagnetic/magnetic fields, or radioactivity
Applicable Standards			Refer to the section Compliance with UL Standards, EU Directives, and Other Safety Standards (in Combination with SERVOPACK).
Mounting			Base-mounted
Performance	Speed Control Range		1:5,000 (At the rated torque, the lower limit of the speed control range must not cause the Servomotor to stop.)
	Coefficient of Speed Fluctuation*2		±0.01 % of rated speed max. (for a load fluctuation of 0 % to 100 %)
			0% of rated speed max. (for a voltage fluctuation of ±10 %)
			±0.1 % of rated speed max. (for a temperature fluctuation of 25 °C ±25 °C)
	Torque Control Precision (Repeatability)		±1 %
	Soft Start Time Setting		0 s to 10 s (Can be set separately for acceleration and deceleration.)
I/O Signals	Encoder Divided Pulse Output		Phase A, phase B, phase C: Line-driver output Number of divided output pulses: Any setting is allowed
	Linear Servomotor Overheat Protection Signal Input		Number of input points: 1 Input voltage range: 0 V to +5 V
	Sequence Input Signals	Input Signals that can be allocated	Allowable voltage range: 24 VDC ±20 % Number of input points: 7 Input method: Sink inputs or source inputs Input Signals • P-OT (Forward Drive Prohibit) and N-OT (Reverse Drive Prohibit) signals • /Probe1 (Probe 1 Latch Input) signal • /Probe2 (Probe 2 Latch Input) signal • /Home (Home Switch Input) signal • /P-CL (Forward External Torque Limit) and /N-CL (Reverse External Torque Limit) signals • /SI0 and /SI3 (General-Purpose Input) signals A signal can be allocated and the positive and negative logic can be changed.
	Sequence Output Signals	Fixed Output	Allowable voltage range: 5 VDC to 30 VDC Number of output points: 1 Output signal: ALM (Servo Alarm) signal
		Output Signals that can be allocated	Allowable voltage range: 5 VDC to 30 VDC Number of output points: 5 (A photocoupler output (isolated) is used.) Output Signals • /COIN (Positioning Completion) signal • /V-CMP (Speed Coincidence Detection) signal • /TGON (Rotation Detection) signal • /S-RDY (Servo Ready) signal • /CLT (Torque Limit Detection) signal • /VLT (Speed Limit Detection) signal • /BK (Brake) signal • /WARN (Warning) signal • /NEAR (Near) signal • /ZONE0 (ZONE Signal 1 Output) signal • /ZONE1 (ZONE Signal 2 Output) signal • /ZONE2 (ZONE Signal 3 Output) signal • /ZONE3 (ZONE Signal 4 Output) signal • /nZONE (nZONE Output) signal A signal can be allocated and the positive and negative logic can be changed.
Communications	RS-422A Communications (CN502)	Interfaces	Digital Operator (JUSP-OP05A-1-E)
		1:N Communications	Up to N = 15 stations possible for RS-422A port
		Axis Address Setting	Set with parameters.
	USB Communications (CN7)	Interface	Personal Computer (with SigmaWin+) The software version of the SigmaWin+ must be version 7.11 or higher.
		Communications Standard	Conforms to USB 2.0 standard (12 Mbps).

Displays/Indicators		CHARGE, PWR, RUN, ERR, and L/A (A and B) indicators, and one-digit seven-segment display
EtherCAT Communications Setting Switches		EtherCAT secondary address (S1 and S2), 16 positions
EtherCAT Communications	Applicable Communications Standards	IEC 61158 Type 12, IEC 61800-7 CiA402 Drive Profile
	Physical Layer	100BASE-TX (IEEE 802.3)
	Communications Connectors	CN6A (RJ45): EtherCAT signal input connector CN6B (RJ45): EtherCAT signal output connector
	Cable	Category 5, 4 shielded twisted pairs * The cable is automatically detected with AUTO MDIX.
	Sync Manager	SM0: Mailbox output, SM1: Mailbox input, SM2: Process data output, and SM3: Process data input
	FMMU	FMMU 0: Mapped in process data output (RxPDO) area. FMMU 1: Mapped in process data input (TxPDO) area. FMMU 2: Mapped to mailbox status.
	EtherCAT Commands (Data Link Layer)	APRD, FPRD, BRD, LRD, APWR, FPWR, BWR, LWR, ARMW, and FRMW (APRW, FPRW, BRW, and LRW commands are not supported.)
	Process Data	Assignments can be changed with PDO mapping.
	Mailbox (CoE)	Emergency messages, SDO requests, SDO responses, and SDO information (TxPDO/RxPDO and remote TxPDO/RxPDO are not supported.)
	Distributed Clocks	Free-Run Mode and DC Mode (Can be switched.) Applicable DC cycles: 125 µs to 4 ms in 125-µs increments
	Slave Information Interface	256 bytes (read-only)
	Indicators	EtherCAT communications in progress: Link/Activity x 2 EtherCAT communications status: RUN x 1 EtherCAT error status: ERR x 1
CiA402 Drive Profile		• Homing Mode • Profile Position Mode • Interpolated Position Mode • Profile Velocity Mode • Profile Torque Mode • Cyclic Synchronous Position Mode • Cyclic Synchronous Velocity Mode • Cyclic Synchronous Torque Mode • Touch Probe Function • Torque Limit Function
Analog Monitor (CN5)		Number of points: 2 Output voltage range: ±10 VDC (effective linearity range: ±8 V) Resolution: 16 bits Accuracy: ±20 mV (Typ) Maximum output current: ±10 mA Settling time (±1 %): 1.2 ms (Typ)
Dynamic Brake (DB)		Activated when a servo alarm or overtravel (OT) occurs, or when the power supply to the main circuit or servo is OFF.
Regenerative Processing		Built-in Refer to the catalog for details.
Overtravel (OT) Prevention		Stopping with dynamic brake, deceleration to a stop, or coasting to a stop for the P-OT (Forward Drive Prohibit) or N-OT (Reverse Drive Prohibit) signal
Protective Functions		Overcurrent, overvoltage, low voltage, overload, regeneration error, etc.
Utility Functions		Gain adjustment, alarm history, jogging, origin search, etc.
Safety Functions	Inputs	/HWBB1 and /HWBB2: Base block signals for Power Modules
	Output	EDM1: Monitors the status of built-in safety circuit (fixed output).
	Applicable Standards*3	ISO13849-1 PLe (Category 3), IEC61508 SIL3
Applicable Option Modules		Fully-closed Modules, Option Module Safety

*1. If you combine a Sigma-7 SERVOPACK with a Sigma-V Option Module, the surrounding air temperature specification of the Sigma-V SERVOPACKs must be used, i.e., 0 °C to 55 °C. Also, the applicable surrounding range cannot be increased by derating.

*2. The coefficient of speed fluctuation for load fluctuation is defined as follows:

$$\text{Coeficient of speed fluctuation} = \frac{\text{No-load motor speed - Total-load motor speed}}{\text{Rated motor speed}} \times 100\%$$

*3. The SGD7S-210D, -260D, -280D, and -370D do not have a dynamic brake (DB). If a dynamic brake is necessary, create an external dynamic brake circuit.

*4. Always perform risk assessment for the system and confirm that the safety requirements are met.

	Supported Protocols	• RTC - Real time cyclic protocol - RT class 1 (unsynchronized) • RTA - Real time acyclic protocol • DCP - Discovery and configuration protocol • CL-RPC - Connectionless remote procedure call • LLDP - Link layer discovery protocol • SNMP - Simple network management protocol
	Node Address Setting	DCP
	Indentification & Maintenance Functions	I&MO-3
	Topology Recognition	LLDP, SNMP V1, MIB2
	Power Supply	5 V ±5 %, 500 mA (max.) supplied internal from drive CN10
	LED Indicator	Red (ERR), Green (RUN), PROFINET communicating (L/A) × 2
	Node Type	Axis Drive Unit
	Acyclic Parameter Access	Read/Write Record
	Cyclic Messaging	Set of pre-defined standard telegram: ST1, ST2, ST7, ST8, ST9 Set of pre-defined manufacture telegram: Telegram number 100 Telegram mapping: Dynamic with max. 16 signal entries of free telegram number 999
	Alarm Notification PDU	Optional
PROFIdrive Profile	Standard	IEC 61800-7-1/2/3
	Motor Type / Axis Type	Servo / Rotary, Linear
	Profile Services	Cycle messaging, Acyclic parameter access mechanism, Identification & maintenance functions (I&M03), PROFIdrive parameters, Diagnostic and alarm mechanism, Fault buffer mechanism
	Application Classes	1, 3
	PROFIdrive Position and Velocity Modes	Motion profile type: Linear
	CIA402 Homing Modes	CIA402 Supported methods: 1-6, 17-22, 35, 33, 34 Motion profile type: Linear Homing persistent in absolute motor encoder
	CIA402 Torque Mode	Torque Profile Type: Linear
Drive Profile		• Homing Mode • PROFIdrive Position Mode • PROFIdrive Velocity Mode • Profile Torque Mode • Touch Probe Function • Torque Limit Function
Analog Monitor (CN5)		Number of points: 2 Output voltage range: ±10 VDC (effective linearity range: ±8 V) Resolution: 16 bits Accuracy: ±20 mV (Typ) Maximum output current: ±10 mA Settling time (±1 %): 1.2 ms (Typ)
Dynamic Brake (DB)		Activated when a servo alarm or overtravel (OT) occurs, or when the power supply to the main circuit or servo is OFF.
Regenerative Processing		Built-in. Refer to the catalog for details.
Overtravel (OT) Prevention		Stopping with dynamic brake, deceleration to a stop, or coasting to a stop for the P-OT (Forward Drive Prohibit) or N-OT (Reverse Drive Prohibit) signal
Protective Functions		Overcurrent, overvoltage, low voltage, overload, regeneration error, etc.
Utility Functions		Gain adjustment, alarm history, jogging, origin search, etc.
Safety Functions	Inputs	/HWBB1 and /HWBB2: Base block signals for Power Modules
	Output	EDM1: Monitors the status of built-in safety circuit (fixed output).
	Applicable Standards*3	ISO13849-1 PLe (Category 3), IEC61508 SIL3
Applicable Option Modules		Fully-closed Modules, Option Module Safety

*1. If you combine a Sigma-7 SERVOPACK with a Sigma-V Option Module, the surrounding air temperature specification of the Sigma-V SERVOPACKs must be used, i.e., 0 °C to 55 °C. Also, the applicable surrounding range cannot be increased by derating.

*2. The coefficient of speed fluctuation for load fluctuation is defined as follows:

$$\text{Coeficient of speed fluctuation} = \frac{\text{No-load motor speed - Total-load motor speed}}{\text{Rated motor speed}} \times 100\%$$

*3. The SGD7S-210D, -260D, -280D, and -370D do not have a dynamic brake (DB). If a dynamic brake is necessary, create an external dynamic brake circuit.

*4. Always perform risk assessment for the system and confirm that the safety requirements are met.

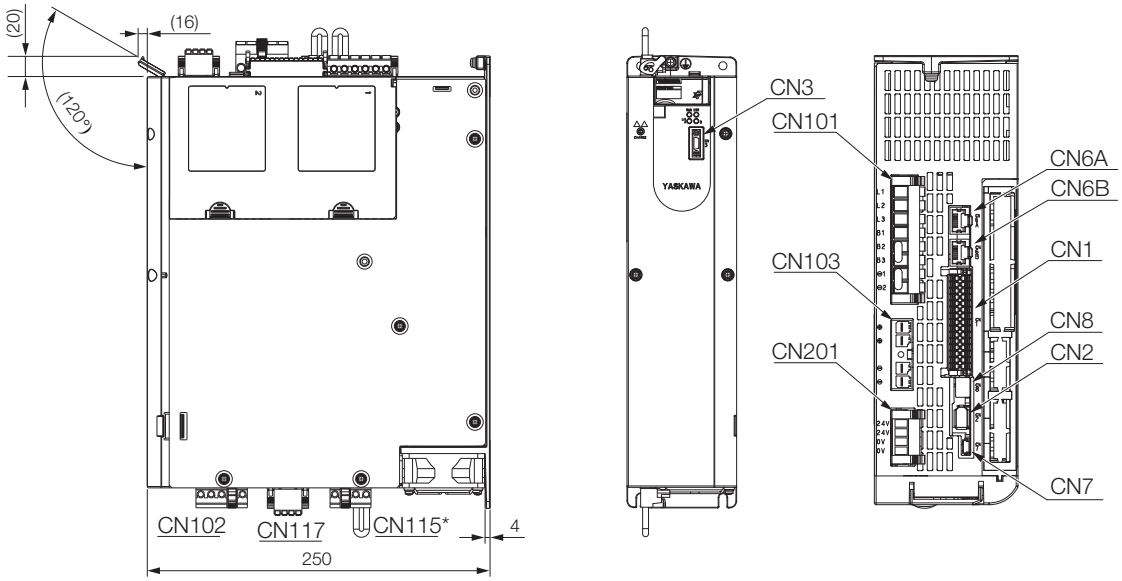
Front cover dimensions and connector specifications

The front cover dimensions and panel connectors depend on the SERVOPACK interface. Refer to the following figures.

Front cover dimensions and connector specifications

The front cover dimensions and panel connector section are the same for all models.
Refer to the following figures and table.

• Front Cover Dimensions and Connectors



* Dynamic Brake Connector only for SGD7S-1R9D up to -170D.

• Connector Specifications

Connector No.	Function	Model	Yaskawa Order Code	Number of Pins	Manufacturer
CN1	I/O Connector	DFMC1,5/15-ST-3,5-LRBK	JUSP-7CN001	30	Phoenix Contact

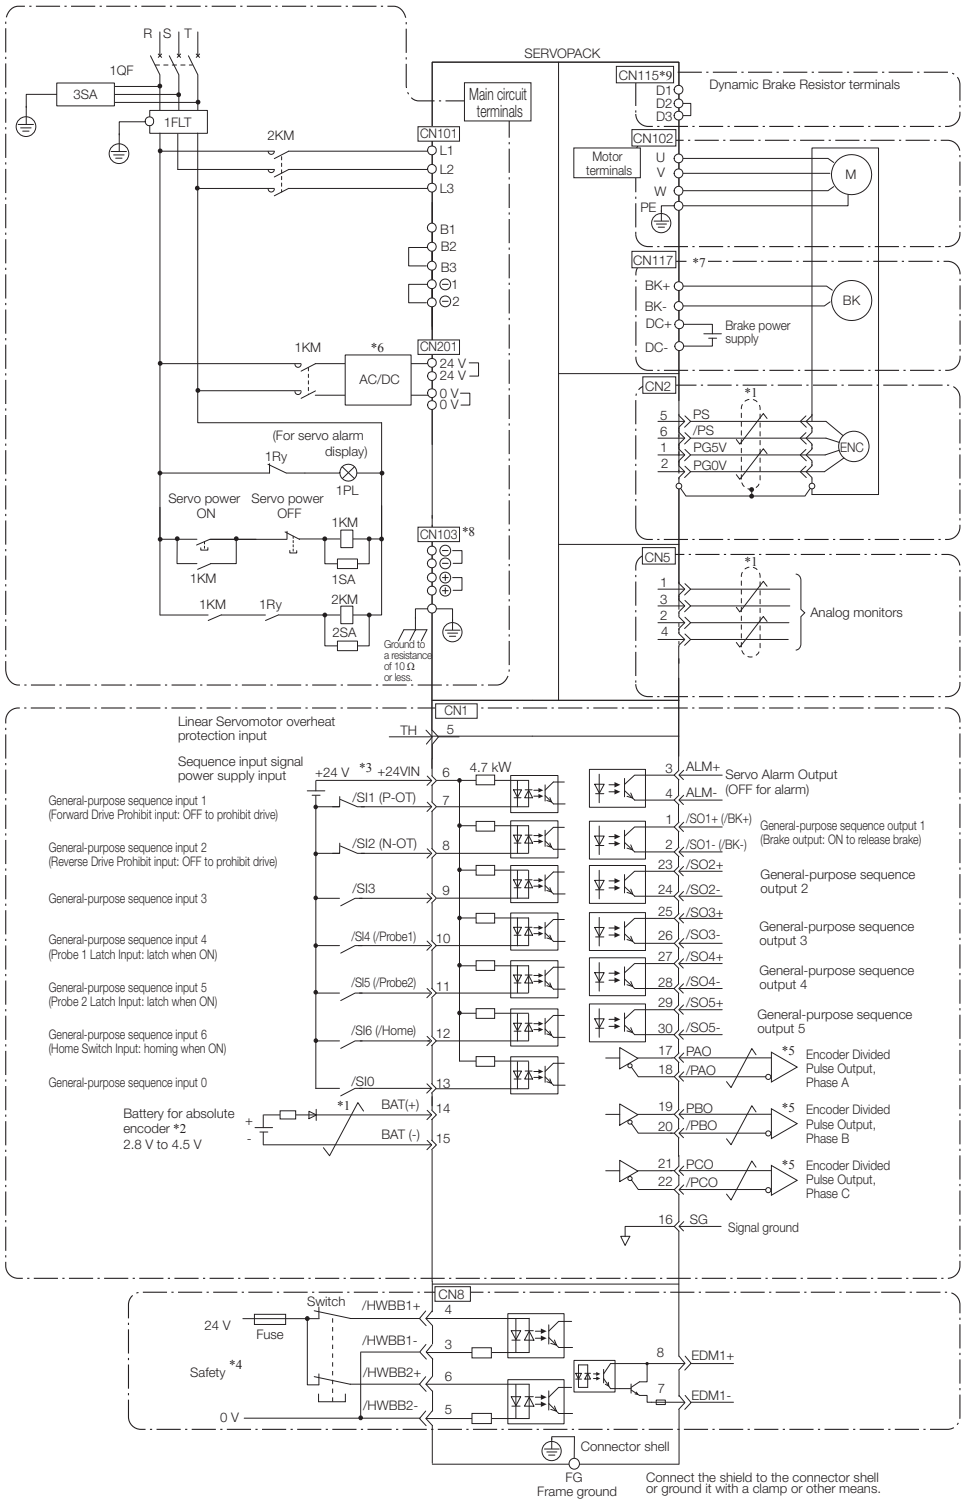
System configurations up to 5 kW

SGD7S single-axis EtherCAT reference SERVOPACKs

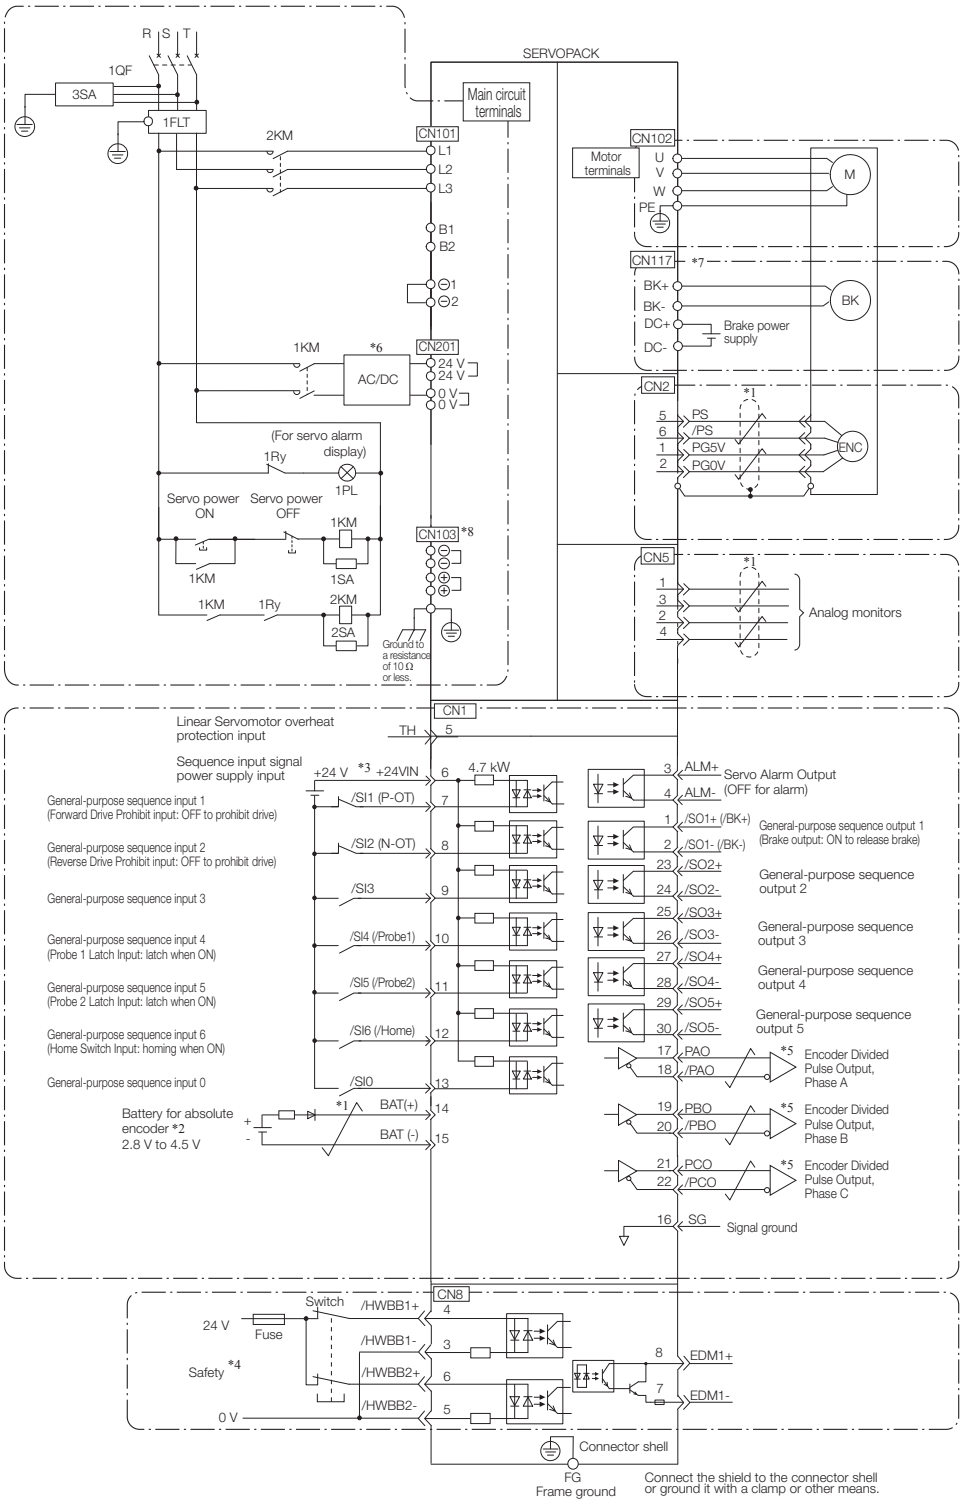


*1. represents twisted-pair wires.

*2. Connect these when using an absolute encoder. If the Encoder Cable with a Battery Case is connected, do not connect a backup battery.
*3. The 24-VDC power supply is not provided by Yaskawa. Use a 24-VDC power supply with double insulation or reinforced insulation.
*4. Refer to the manual if you use a safety function device. If you do not use the safety function, insert the Safety Jumper Connector (provided as an accessory) into CN8 when you use the SERVOPACK.
*5. Always use line receivers to receive the output signals.
*6. Use an SELV-compliant power supply according to EN/IEC 60950-1 to input 24-VDC to the control power supply input terminals.
*7. The CN117 connector is only used for SERVOPACKs with built-in Servomotor brake control, SGD7S-oooDooB026F64 and SGD7W-oooDooB026.
*8. If using these terminals, contact your Yaskawa representative.
*9. The CN115 Dynamic Brake Connector is only for SGD7S-1R9D up to -170D.

System configurations with 6 kW and more

SGD7S single-axis EtherCAT reference SERVOPACKs



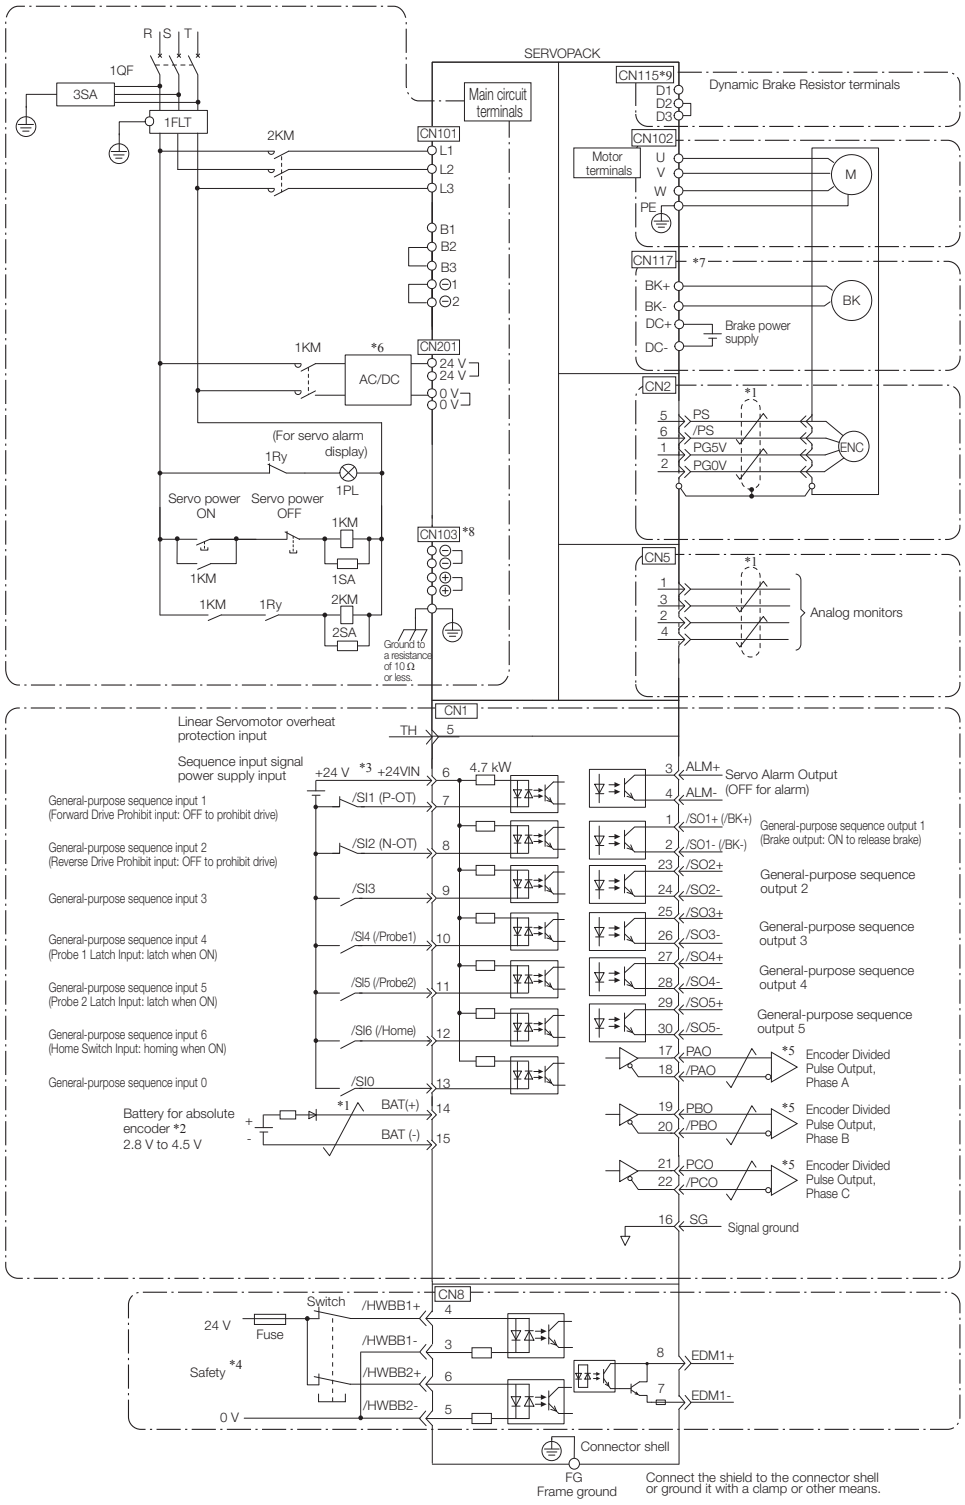
*1. ≠ represents twisted-pair wires.

*2. Connect these when using an absolute encoder. If the Encoder Cable with a Battery Case is connected, do not connect a backup battery.
*3. The 24-VDC power supply is not provided by Yaskawa. Use a 24-VDC power supply with double insulation or reinforced insulation.
*4. Refer to the manual if you use a safety function device. If you do not use the safety function, insert the Safety Jumper Connector (provided as an accessory) into CN8 when you use the SERVOPACK.
*5. Always use line receivers to receive the output signals.
*6. Use an SELV-compliant power supply according to EN/IEC 60950-1 to input 24-VDC to the control power supply input terminals.
*7. The CN117 connector is only used for SERVOPACKs with built-in Servomotor brake control, SGD7S-oooDooB026F64 and SGD7W-oooDooB026.
*8. If using these terminals, contact your Yaskawa representative.

With the SGD7S-210D, -260D, -280D, or -370D, connect a Regenerative Resistor Unit between B1 and B2.

System configurations up to 5 kW

SGD7S single-axis PROFINET reference SERVOPACKs

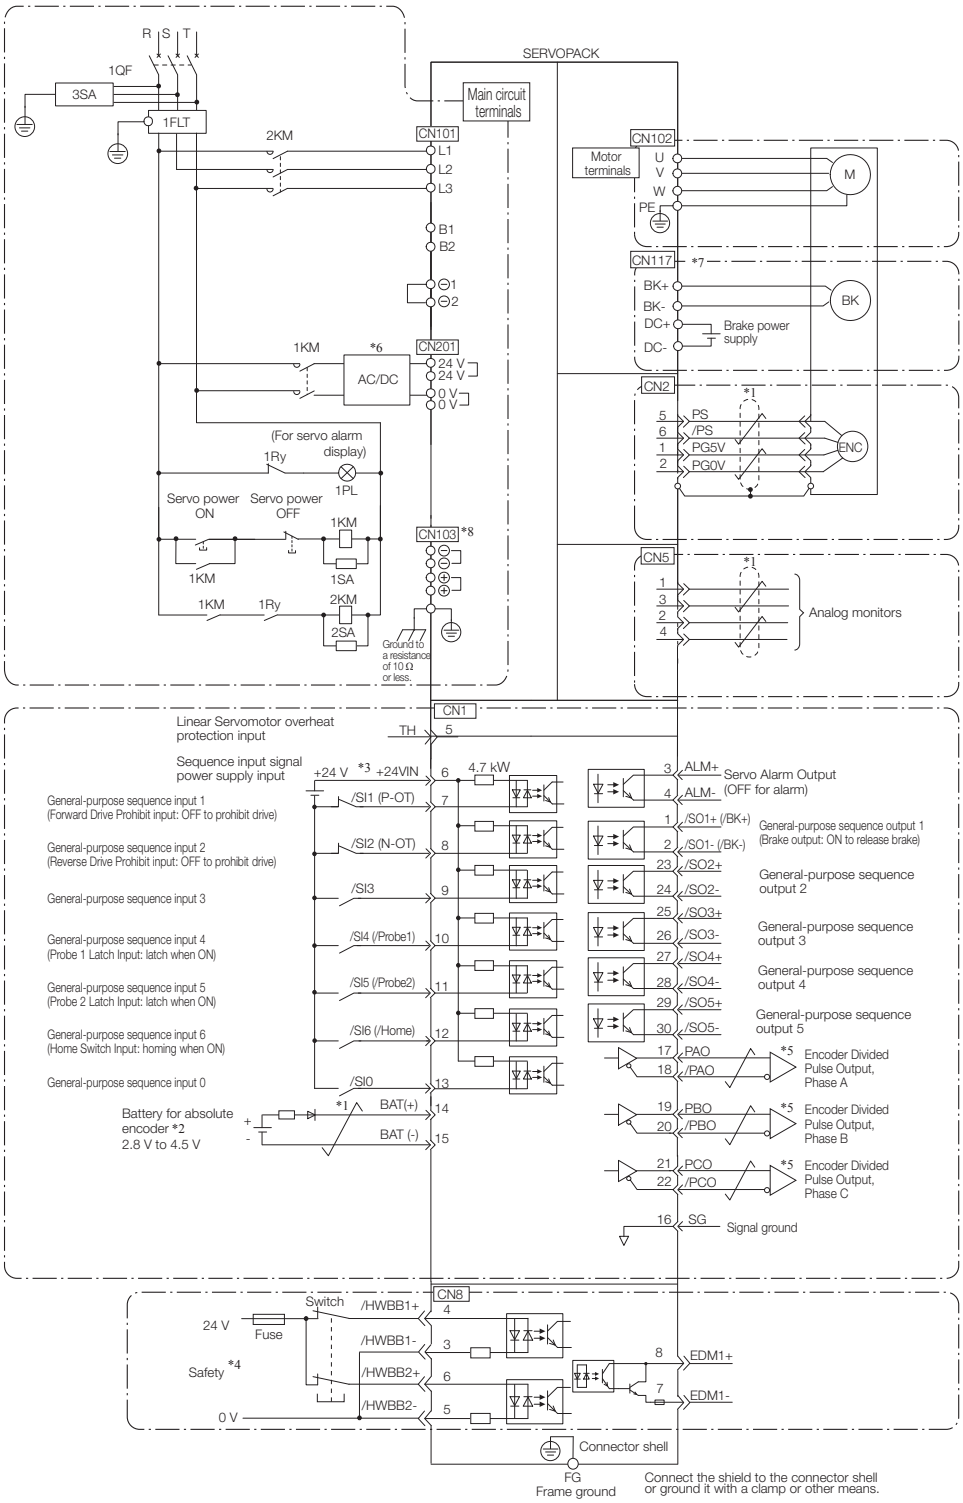


*1. represents twisted-pair wires.

*2. Connect these when using an absolute encoder. If the Encoder Cable with a Battery Case is connected, do not connect a backup battery.
*3. The 24-VDC power supply is not provided by Yaskawa. Use a 24-VDC power supply with double insulation or reinforced insulation.
*4. Refer to the manual if you use a safety function device. If you do not use the safety function, insert the Safety Jumper Connector (provided as an accessory) into CN8 when you use the SERVOPACK.
*5. Always use line receivers to receive the output signals.
*6. Use an SELV-compliant power supply according to EN/IEC 60950-1 to input 24-VDC to the control power supply input terminals.
*7. The CN117 connector is only used for SERVOPACKs with built-in Servomotor brake control, SGD7S-oooDooB026F64 and SGD7W-oooDooB026.
*8. If using these terminals, contact your Yaskawa representative.
*9. The CN115 Dynamic Brake Connector is only for SGD7S-1R9D up to -170D.

System configurations with 6 kW and more

SGD7S single-axis PROFINET reference SERVOPACKs



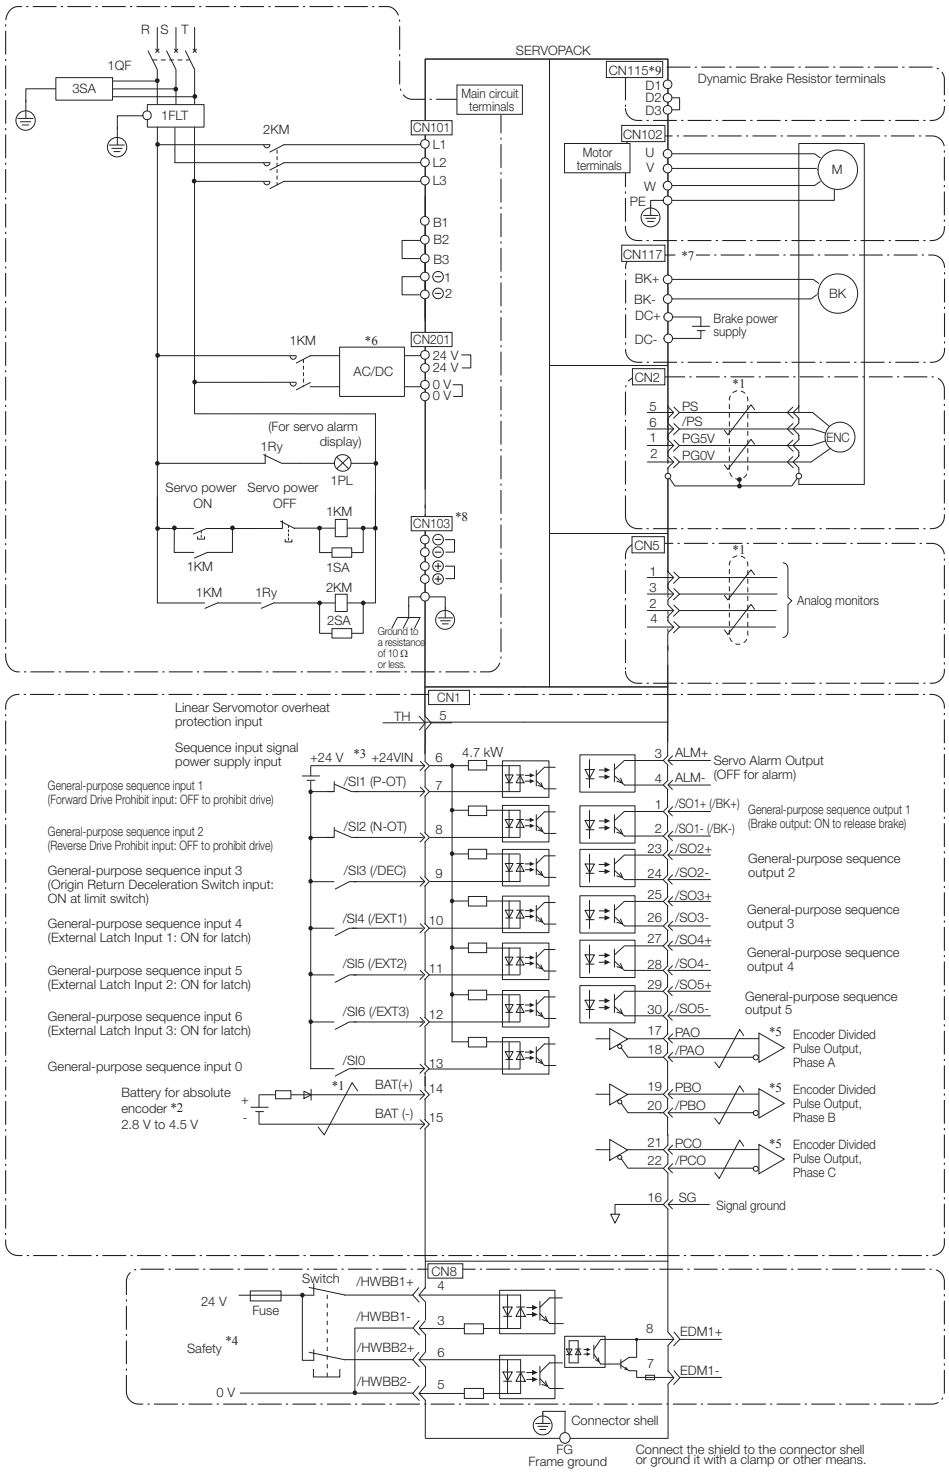
*1. represents twisted-pair wires.

*2. Connect these when using an absolute encoder. If the Encoder Cable with a Battery Case is connected, do not connect a backup battery.
*3. The 24-VDC power supply is not provided by Yaskawa. Use a 24-VDC power supply with double insulation or reinforced insulation.
*4. Refer to the manual if you use a safety function device. If you do not use the safety function, insert the Safety Jumper Connector (provided as an accessory) into CN8 when you use the SERVOPACK.
*5. Always use line receivers to receive the output signals.
*6. Use an SELV-compliant power supply according to EN/IEC 60950-1 to input 24-VDC to the control power supply input terminals.
*7. The CN117 connector is only used for SERVOPACKs with built-in Servomotor brake control, SGD7S-oooDooB026F64 and SGD7W-oooDooB026.
*8. If using these terminals, contact your Yaskawa representative.

With the SGD7S-210D, -260D, -280D, or -370D, connect a Regenerative Resistor Unit between B1 and B2.

System configurations up to 5 kW

SGD7S single-axis MECHATROLINK-III reference SERVOPACKs

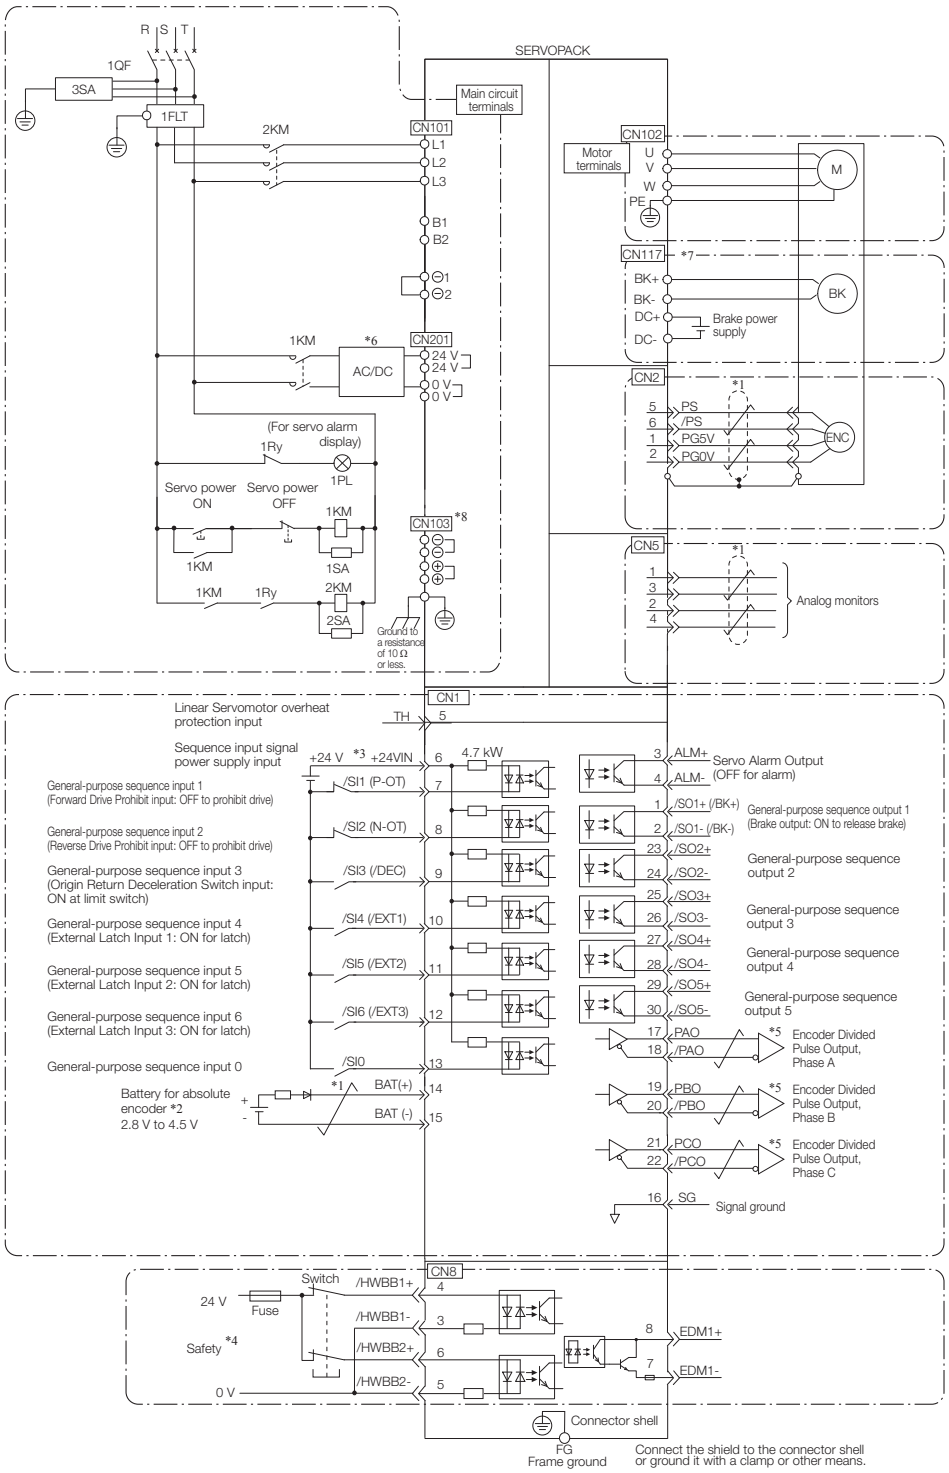


*1. represents twisted-pair wires.

*2. Connect these when using an absolute encoder. If the Encoder Cable with a Battery Case is connected, do not connect a backup battery.
*3. The 24-VDC power supply is not provided by Yaskawa. Use a 24-VDC power supply with double insulation or reinforced insulation.
*4. Refer to the manual if you use a safety function device. If you do not use the safety function, insert the Safety Jumper Connector (provided as an accessory) into CN8 when you use the SERVOPACK.
*5. Always use line receivers to receive the output signals.
*6. Use an SELV-compliant power supply according to EN/IEC 60950-1 to input 24-VDC to the control power supply input terminals.
*7. The CN117 connector is only used for SERVOPACKs with built-in Servomotor brake control, SGD7S-oooDooB026F64 and SGD7W-oooDooB026.
*8. If using these terminals, contact your Yaskawa representative.
*9. The CN115 Dynamic Brake Connector is only for SGD7S-1R9D up to -170D.

System configurations with 6 kW and more

SGD7S single-axis MECHATROLINK-III reference SERVOPACKs



*1. ⏦ represents twisted-pair wires.

*2. Connect these when using an absolute encoder. If the Encoder Cable with a Battery Case is connected, do not connect a backup battery.
*3. The 24-VDC power supply is not provided by Yaskawa. Use a 24-VDC power supply with double insulation or reinforced insulation.
*4. Refer to the manual if you use a safety function device. If you do not use the safety function, insert the Safety Jumper Connector (provided as an accessory) into CN8 when you use the SERVOPACK.
*5. Always use line receivers to receive the output signals.
*6. Use an SELV-compliant power supply according to EN/IEC 60950-1 to input 24-VDC to the control power supply input terminals.
*7. The CN117 connector is only used for SERVOPACKs with built-in Servomotor brake control, SGD7S-oooDooB026F64 and SGD7W-oooDooB026.
*8. If using these terminals, contact your Yaskawa representative.

With the SGD7S-210D, -260D, -280D, or -370D, connect a Regenerative Resistor Unit between B1 and B2.

Cables for SERVOPACKs

Important

1. Use the cable specified by Yaskawa for the computer cable.
   Operation may not be dependable with any other cable.

Notes:
Refer to the manual for the following information. Cable dimensional drawings and cable connection specifications.
Order numbers and specifications of individual connectors for cables. Sigma-7-Series AC Servo Drive Peripheral Device Selection Manual.

Name		Length (L)	Order Number	Appearance
Analog Monitor Cable		1 m	JZSP-CA01-E	
Digital Operator (including 1 m cable)		1 m	JUSP-OP05A-1-E	
Digital Operator Cable		0.3 m	JZSP-CVS07-A3-E*2	Computer Cable		2.5 m	JZSP-CVS06-02-E	Safety Function Device Cable	Cables with Connectors*1	1 m	JZSP-CVH03-01-E-G#			3 m	JZSP-CVH03-03-E-G#	
	Connector Kit*2		Contact Tyco Electronics Japan G.K. Product name: Industrial Mini I/O D-shape Type 1 Plug Connector Kit Model number: 2013595-1	
MECHATROLINK-III EtherCAT PROFINET Communications Cables*3		0.2 m	CM3R☐M0-00P2-E			0.5 m	CM3R☐M0-00P5-E	
		1 m	JZSP-CM3R☐M0-01-E	
		3 m	JZSP-CM3R☐M0-03-E	
		5 m	JZSP-CM3R☐M0-05-E	
		10 m	JZSP-CM3R☐M0-10-E	
		20 m	JZSP-CM3R☐00-20-E	
		30 m	JZSP-CM3R☐00-30-E	
		40 m	JZSP-CM3R☐01-40-E	
		50 m	JZSP-CM3R☐01-50-E	

Cables are manufactured with an accuracy of one decimal place. Customized cable length possible (e.g. 07A5 for 7.5 m).

*1. When using the safety function, connect this cable to the safety devices.
Even when not using the safety function, use SERVOPACKs with the Safe Jumper Connector (model: JZSP-CVH05-E) connected.

*2. Use the connector kit when you make cables yourself.

*3. This cable is available in two variants. The order number for these cables differs at the marked ☐, an „R“ at this place is used for Cables with RJ45 Connectors on both ends, while an „M“ is used for Cables with RJ45 Connector on One End and IMI Connector on the other End. „M“ Variant not available for PROFINET cables.

Motor connection shielding clamp

Shielding clamp mountable on Sigma-7 400 V SERVOPACKs up to 15 kW.
Contact your Yaskawa representative for more information.

SERVOPACK Model	Order No.	Specification
Sigma-7 400 V up to 3.0 kW	KLBUE 4-13.5_SC	Sigma-7 400 V from 5 kW up to 7.5 kW	KLBUE 10-20_SC	
Sigma-7 400 V for 11 kW & 15 kW	KLBUE 15-32_SC

Ratings and specifications

Ratings

Three-phase, 400 V AC

Model SGD7W-			2R6D	5R4D
Maximum Applicable Motor Capacity per Axis [kW]			0.75	1.5
Continuous Output Current per Axis [A]			2.6	5.4
Instantaneous Maximum Output Current per Axis [A]			8.5	14
Main Circuit	Power Supply		Three-phase, 380 V AC to 480 V AC, -15 % to +10 %, 50 Hz/60 Hz	
	Input Current [A]*		4.4	8.6
Control	Power Supply		24 V DC ±15 %	
	Input Current [A]*		1.2	
Power Supply Capacity [kVA]*			3.5	6.8
Power Loss*	Main Circuit Power Loss [W]		65.4	108.6
	Control Circuit Power Loss [W]		21	
	Built-in Regenerative Resistor Power Loss [W]		28	28
	Total Power Loss [W]		114.4	157.6
Regenerative Resistor	Built-In Regenerative Resistor	Resistance [Ω]	43	43
		Capacity [W]	140	140
	Minimum Allowable External Resistance [Ω]		43	43
Overvoltage Category			III	

* This is the net value at the rated load.

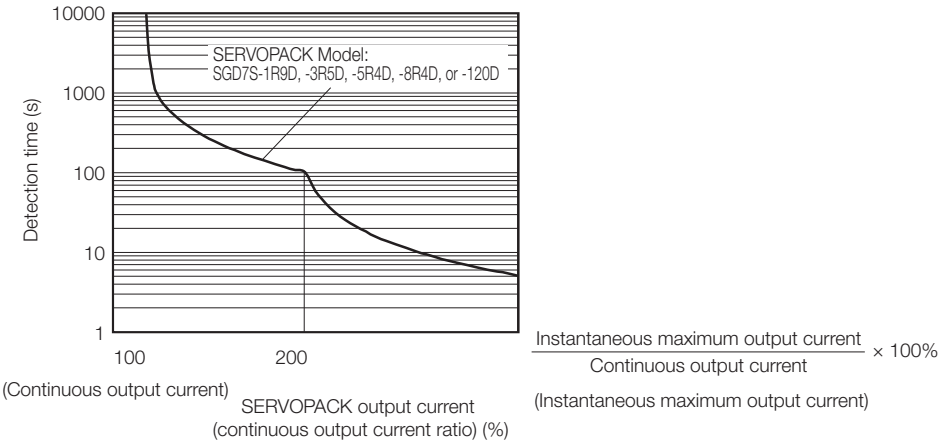
540 V DC

Model SGD7W-			2R6D	5R4D
Maximum Applicable Motor Capacity per Axis [kW]			0.75	1.5
Continuous Output Current per Axis [A]			2.6	5.4
Instantaneous Maximum Output Current per Axis [A]			8.5	14
Main Circuit	Power Supply		513 V DC to 648 V DC, -15 % to +10 %	
	Input Current [A]*		5	11
Control	Power Supply		24 V DC ±15 %	
	Input Current [A]*		1.2	
Power Supply Capacity [kVA]*			3.5	6.8
Power Loss*	Main Circuit Power Loss [W]		47.4	90.6
	Control Circuit Power Loss [W]		21	
	Total Power Loss [W]		68.4	111.6
Overvoltage Category			III	

* This is the net value at the rated load.

SERVOPACK overload protection characteristics

The overload detection level is set for hot start conditions with a SERVOPACK surrounding air temperature of 55°C. An overload alarm (A.710 or A.720) will occur if overload operation that exceeds the overload protection characteristics shown in the following diagram (i.e., operation on the right side of the applicable line) is performed. The actual overload detection level will be the detection level of the connected SERVOPACK or Servomotor that has the lower overload protection characteristics. In most cases, that will be the overload protection characteristics of the Servomotor.



Note:
The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher. For a Yaskawa-specified combination of SERVOPACK and Servomotor, maintain the effective torque within the continuous duty zone of the torque-motor speed characteristic of the Servomotor.

Specifications using EtherCAT communication reference

Item			Specification
Control Method			IGBT-based PWM control, sine wave current drive
Feedback	With Rotary Servomotor		Serial encoder: 24 bits (incremental encoder/absolute encoder)
	With Linear Servomotor		• Absolute linear encoder (The signal resolution depends on the absolute linear encoder.) • Incremental linear encoder (The signal resolution depends on the incremental linear encoder or Serial Converter Unit.)
Environmental Conditions	Surrounding Air Temperature		-5°C to 55°C (60°C with derating)
	Storage Temperature		-20°C to 85°C
	Surrounding Air Humidity		95 % relative humidity max. (with no freezing or condensation)
	Storage Humidity		95 % relative humidity max. (with no freezing or condensation)
	Vibration Resistance		4.9 m/s^2
	Shock Resistance		19.6 m/s^2
	Degree of Protection		IP10
	Pollution Degree		2 • Must be no corrosive or flammable gases. • Must be no exposure to water, oil, or chemicals. • Must be no dust, salts, or iron dust.
	Altitude		1,000 m or less (above 1,000 m with derating)
	Others		Do not use the SERVOPACK in the following locations: Locations subject to static electricity noise, strong electromagnetic/magnetic fields, or radioactivity
Applicable Standards			Refer to the section Compliance with UL Standards, EU Directives, and Other Safety Standards (in Combination with SERVOPACK).
Mounting			Base-mounted
Performance	Speed Control Range		1:5,000 (At the rated torque, the lower limit of the speed control range must not cause the Servomotor to stop.)
	Coefficient of Speed Fluctuation*1		±0.01 % of rated speed max. (for a load fluctuation of 0 % to 100 %)
			0% of rated speed max. (for a voltage fluctuation of ± 10 %)
			±0.1 % of rated speed max. (for a temperature fluctuation of 25 °C ± 25 °C)
	Torque Control Precision (Repeatability)		±1 %
	Soft Start Time Setting		0 s to 10 s (Can be set separately for acceleration and deceleration.)
I/O Signals	Linear Servomotor Overheat Protection Signal Input		Number of input points: 1 Input voltage range: 0 V to +5 V
	Sequence Input Signals	Input Signals that can be allocated	Allowable voltage range: 24 VDC ±20 % Number of input points: 10 Input method: Sink inputs or source inputs Input Signals • P-OT (Forward Drive Prohibit) and N-OT (Reverse Drive Prohibit) signals • /Probe1 (Probe 1 Latch Input) signal • /Probe2 (Probe 2 Latch Input) signal • /Home (Home Switch Input) signal • /P-CL (Forward External Torque Limit) and /N-CL (Reverse External Torque Limit) signals A signal can be allocated and the positive and negative logic can be changed.
	Sequence Output Signals	Fixed Output	Allowable voltage range: 5 VDC to 30 VDC Number of output points: 1 Output signal: ALM (Servo Alarm) signal
		Output Signals that can be allocated	Allowable voltage range: 5 VDC to 30 VDC Number of output points: 6 (A photocoupler output (isolated) is used.) Output Signals • /COIN (Positioning Completion) signal • /V-CMP (Speed Coincidence Detection) signal • /TGON (Rotation Detection) signal • /S-RDY (Servo Ready) signal • /CLT (Torque Limit Detection) signal • /VLT (Speed Limit Detection) signal • /BK (Brake) signal • /WARN (Warning) signal • /NEAR (Near) signal A signal can be allocated and the positive and negative logic can be changed.
Communications	RS-422A Communications (CN502)	Interfaces	Digital Operator (JUSP-OP05A-1-E)
		1:N Communications	Up to N = 15 stations possible for RS-422A port
		Axis Address Setting	Set with parameters.
	USB Communications (CN7)	Interface	Personal Computer (with SigmaWin+) The software version of the SigmaWin+ must be version 7.11 or higher.
		Communications Standard	Conforms to USB 2.0 standard (12 Mbps).

Item		Specification
Displays/Indicators		CHARGE, PWR, RUN, ERR, and L/A (A and B) indicators, and two, one-digit seven-segment display
EtherCAT Communications Setting Switches		EtherCAT secondary address (S1 and S2), 16 positions
EtherCAT Communications	Applicable Communications Standards	IEC 61158 Type 12, IEC 61800-7 CiA402 Drive Profile
	Physical Layer	100BASE-TX (IEEE 802.3)
	Communications Connectors	CN6A (RJ45): EtherCAT signal input connector CN6B (RJ45): EtherCAT signal output connector
	Cable	Category 5, 4 shielded twisted pairs The cable is automatically detected with AUTO MDIX.
	Sync Manager	SM0: Mailbox output, SM1: Mailbox input, SM2: Process data output, and SM3: Process data input
	FMMU	FMMU 0: Mapped in process data output (RxPDO) area. FMMU 1: Mapped in process data input (TxPDO) area. FMMU 2: Mapped to mailbox status.
	EtherCAT Commands (Data Link Layer)	APRD, FPRD, BRD, LRD, APWR, FPWR, BWR, LWR, ARMW, and FRMW (APRW, FPRW, BRW, and LRW commands are not supported.)
	Process Data	Assignments can be changed with PDO mapping.
	Mailbox (CoE)	Emergency messages, SDO requests, SDO responses, and SDO information (TxPDO/RxPDO and remote TxPDO/RxPDO are not supported.)
	Distributed Clocks	Free-Run Mode and DC Mode (Can be switched.) Applicable DC cycles: 125 µs to 4 ms in 125-µs increments
	Slave Information Interface	256 bytes (read-only)
	Indicators	EtherCAT communications in progress: Link/Activity x 2 EtherCAT communications status: RUN x 1 EtherCAT error status: ERR x 1
CiA402 Drive Profile		• Homing Mode • Profile Position Mode • Interpolated Position Mode • Profile Velocity Mode • Profile Torque Mode • Cyclic Synchronous Position Mode • Cyclic Synchronous Velocity Mode • Cyclic Synchronous Torque Mode • Touch Probe Function • Torque Limit Function
Analog Monitor (CN5)		Number of points: 2 Output voltage range: ±10 VDC (effective linearity range: ±8 V) Resolution: 16 bits Accuracy: ±20 mV (Typ) Maximum output current: ±10 mA Settling time (±1 %): 1.2 ms (Typ)
Dynamic Brake (DB)		Activated when a servo alarm or overtravel (OT) occurs, or when the power supply to the main circuit or servo is OFF.
Regenerative Processing		Built-in Refer to the catalog for details.
Overtravel (OT) Prevention		Stopping with dynamic brake, deceleration to a stop, or coasting to a stop for the P-OT (Forward Drive Prohibit) or N-OT (Reverse Drive Prohibit) signal
Protective Functions		Overcurrent, overvoltage, low voltage, overload, regeneration error, etc.
Utility Functions		Gain adjustment, alarm history, jogging, origin search, etc.
Safety Functions	Inputs	/HWBB_A1, /HWWB_A2, /HWWB_B1 and /HWBB_B2: Base block signals for Power Modules
	Output	EDM_A and EDM_B: Monitor the status of built-in safety circuits (fixed outputs).
	Applicable Standards*2	ISO13849-1 PLe (Category 3), IEC61508 SIL3
Applicable Option Modules		Option Module Safety

*1. The coefficient of speed fluctuation for load fluctuation is defined as follows:

$$\text{Coeficient of speed fluctuation} = \frac{\text{No-load motor speed - Total-load motor speed}}{\text{Rated motor speed}} \times 100\%$$

*2. Always perform risk assessment for the system and confirm that the safety requirements are met.

Specifications using MECHATROLINK-III communication reference

Item			Specification
Control Method			IGBT-based PWM control, sine wave current drive
Feedback	With Rotary Servomotor		Serial encoder: 24 bits (incremental encoder/absolute encoder)

Environmental Conditions	Surrounding Air Temperature		-5°C to 55°C (60°C with derating)
	Storage Temperature		-20°C to 85°C
	Surrounding Air Humidity		95 % relative humidity max. (with no freezing or condensation)
	Storage Humidity		95 % relative humidity max. (with no freezing or condensation)
	Vibration Resistance		4.9 m/s^2
	Shock Resistance		19.6 m/s^2
	Degree of Protection		IP10
	Pollution Degree		2 • Must be no corrosive or flammable gases. • Must be no exposure to water, oil, or chemicals. • Must be no dust, salts, or iron dust.
	Altitude		1,000 m or less (above 1,000 m with derating)
	Others		Do not use the SERVOPACK in the following locations: Locations subject to static electricity noise, strong electromagnetic/magnetic fields, or radioactivity
Applicable Standards			Refer to the section Compliance with UL Standards, EU Directives, and Other Safety Standards (in Combination with SERVOPACK).
Mounting			Base-mounted
Performance	Speed Control Range		1:5,000 (At the rated torque, the lower limit of the speed control range must not cause the Servomotor to stop.)
	Coefficient of Speed Fluctuation*1		±0.01 % of rated speed max. (for a load fluctuation of 0 % to 100 %)
			0% of rated speed max. (for a voltage fluctuation of ± 10 %)
			±0.1 % of rated speed max. (for a temperature fluctuation of 25 °C ± 25 °C)
	Torque Control Precision (Repeatability)		±1 %
	Soft Start Time Setting		0 s to 10 s (Can be set separately for acceleration and deceleration.)
I/O Signals	Linear Servomotor Overheat Protection Signal Input		Number of input points: 1 Input voltage range: 0 V to +5 V
	Sequence Input Signals	Input Signals that can be allocated	Allowable voltage range: 24 VDC ±20 % Number of input points: 10 Input method: Sink inputs or source inputs Input Signals • /DEC (Origin Return Deceleration Switch) signal • /EXT1 to /EXT3 (External Latch Input 1 to 3) signals • P-OT (Forward Drive Prohibit) and N-OT (Reverse Drive Prohibit) signals • /P-CL (Forward External Torque Limit) and /N-CL (Reverse External Torque Limit) signals • /P-DET (Polarity Detection) signal A signal can be allocated and the positive and negative logic can be changed.
	Sequence Output Signals	Fixed Output	Allowable voltage range: 5 VDC to 30 VDC Number of output points: 1 Output signal: ALM (Servo Alarm) signal
		Output Signals that can be allocated	Allowable voltage range: 5 VDC to 30 VDC Number of output points: 6 (A photocoupler output (isolated) is used.) Output Signals • /COIN (Positioning Completion) signal • /V-CMP (Speed Coincidence Detection) signal • /TGON (Rotation Detection) signal • /S-RDY (Servo Ready) signal • /CLT (Torque Limit Detection) signal • /VLT (Speed Limit Detection) signal • /BK (Brake) signal • /WARN (Warning) signal • /NEAR (Near) signal A signal can be allocated and the positive and negative logic can be changed.
Communications	RS-422A Communications (CN3)	Interfaces	Digital Operator (JUSP-OP05A-1-E)
		1:N Communications	Up to N = 15 stations possible for RS-422A port
		Axis Address Setting	Set with parameters.
	USB Communications (CN7)	Interface	Personal Computer (with SigmaWin+) The software version of the SigmaWin+ must be version 7.11 or higher.
		Communications Standard	Conforms to USB 2.0 standard (12 Mbps).

Continued on next page.

Continued from previous page.

Item		Specification
Displays/Indicators		CHARGE, PWR, CN, L1 and L2 indicators, and two, one-digit seven-segment display
MECHATROLINK-III Communications	Communications Protocol	MECHATROLINK-III
	Station Address Settings	03 to EF hex (maximum number of slaves: 62) The rotary switches (S1 and S2) are used to set the station address.
	Extended Address Setting	Axis A: 00 hex, Axis B: 01 hex
	Raud Rate	100 Mbps
	Transmission Cycle	250 µs, 500 µs, 750 µs, 1.0 ms to 4.0 ms (multiples of 0.5 ms)
	Number of Transmission Bytes	32 or 48 bytes per station A DIP switch (S3) is used to select the number of transmission bytes.
Reference Method	Performance	Position, speed, or torque control with MECHATROLINK-III communications
	Reference Input	MECHATROLINK-III commands (sequence, motion, data setting, data access, monitoring, adjustment, etc.)
	Profile	MECHATROLINK-III standard servo profile
Analog Monitor (CN5)		Number of points: 2 Output voltage range: ±10 VDC (effective linearity range: ±8 V) Resolution: 16 bits Accuracy: ±20 mV (Typ) Maximum output current: ±10 mA Settling time (±1 %): 1.2 ms (Typ)
Dynamic Brake (DB)		Activated when a servo alarm or overtravel (OT) occurs, or when the power supply to the main circuit or servo is OFF.
Regenerative Processing		Built-in Refer to the catalog for details.
Overtravel (OT) Prevention		Stopping with dynamic brake, deceleration to a stop, or coasting to a stop for the P-OT (Forward Drive Prohibit) or N-OT (Reverse Drive Prohibit) signal
Protective Functions		Overcurrent, overvoltage, low voltage, overload, regeneration error, etc.
Utility Functions		Gain adjustment, alarm history, jogging, origin search, etc.
Safety Functions	Inputs	/HWBB_A1, /HWWB_A2, /HWWB_B1 and /HWBB_B2: Base block signals for Power Modules
	Output	EDM_A and EDM_B: Monitor the status of built-in safety circuits (fixed outputs).
	Applicable Standards*2	ISO13849-1 PLe (Category 3), IEC61508 SIL3
Applicable Option Modules		Option Module Safety

*1. The coefficient of speed fluctuation for load fluctuation is defined as follows:

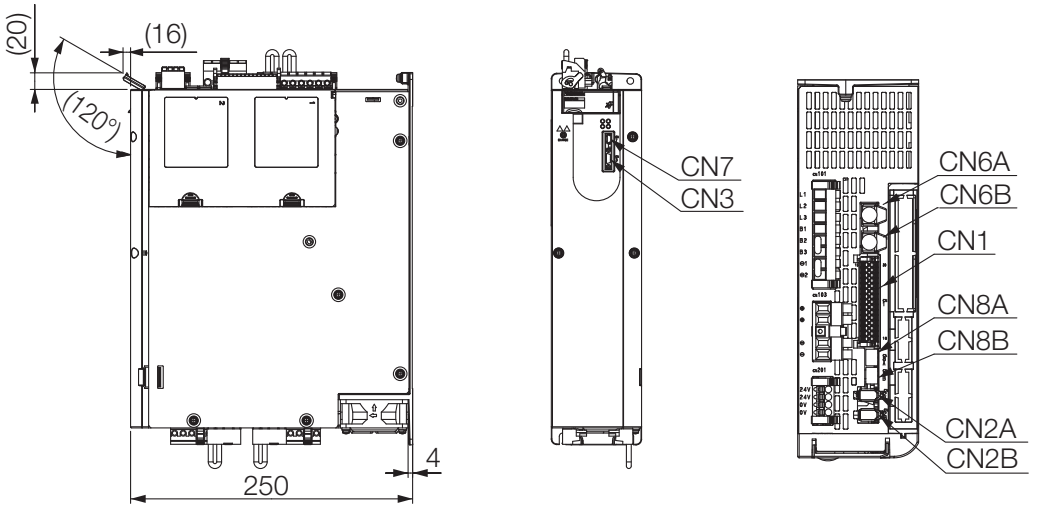
$$\text{Coeficient of speed fluctuation} = \frac{\text{No-load motor speed - Total-load motor speed}}{\text{Rated motor speed}} \times 100\%$$

*2. Always perform risk assessment for the system and confirm that the safety requirements are met.

Front cover dimensions and connector specifications

The front cover dimensions and panel connector section are the same for all models. Refer to the following figures and table.

• Front Cover Dimensions and Connectors



Unit: mm

• Connector Specifications

Connector No.	Function	Model	Yaskawa Order Code	Number of Pins	Manufacturer
CN1	I/O Connector	DFMC1,5/15-ST-3,5-LRBK	JUSP-7CN001	30	Phoenix Contact
CN2A/CN2B	Encoder Connector Axis A Encoder Connector Axis B	-	JZSP-CMP9-1-E	6	Sumitomo 3M Ltd.

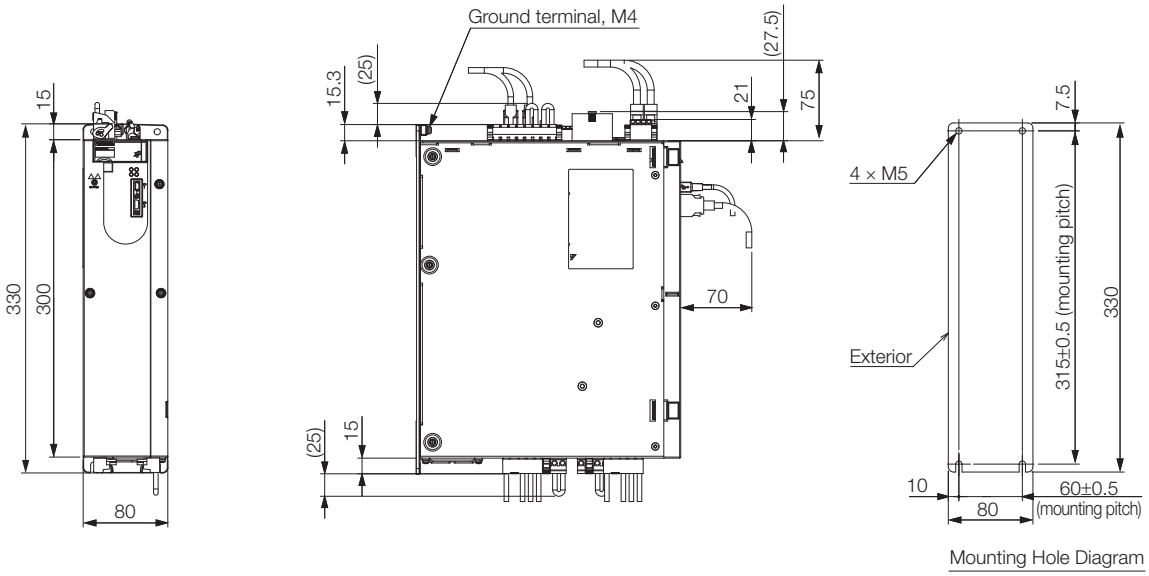
Note: The above connectors or their equivalents are used for the SERVOPACKs.

Base-mounted SERVOPACKs



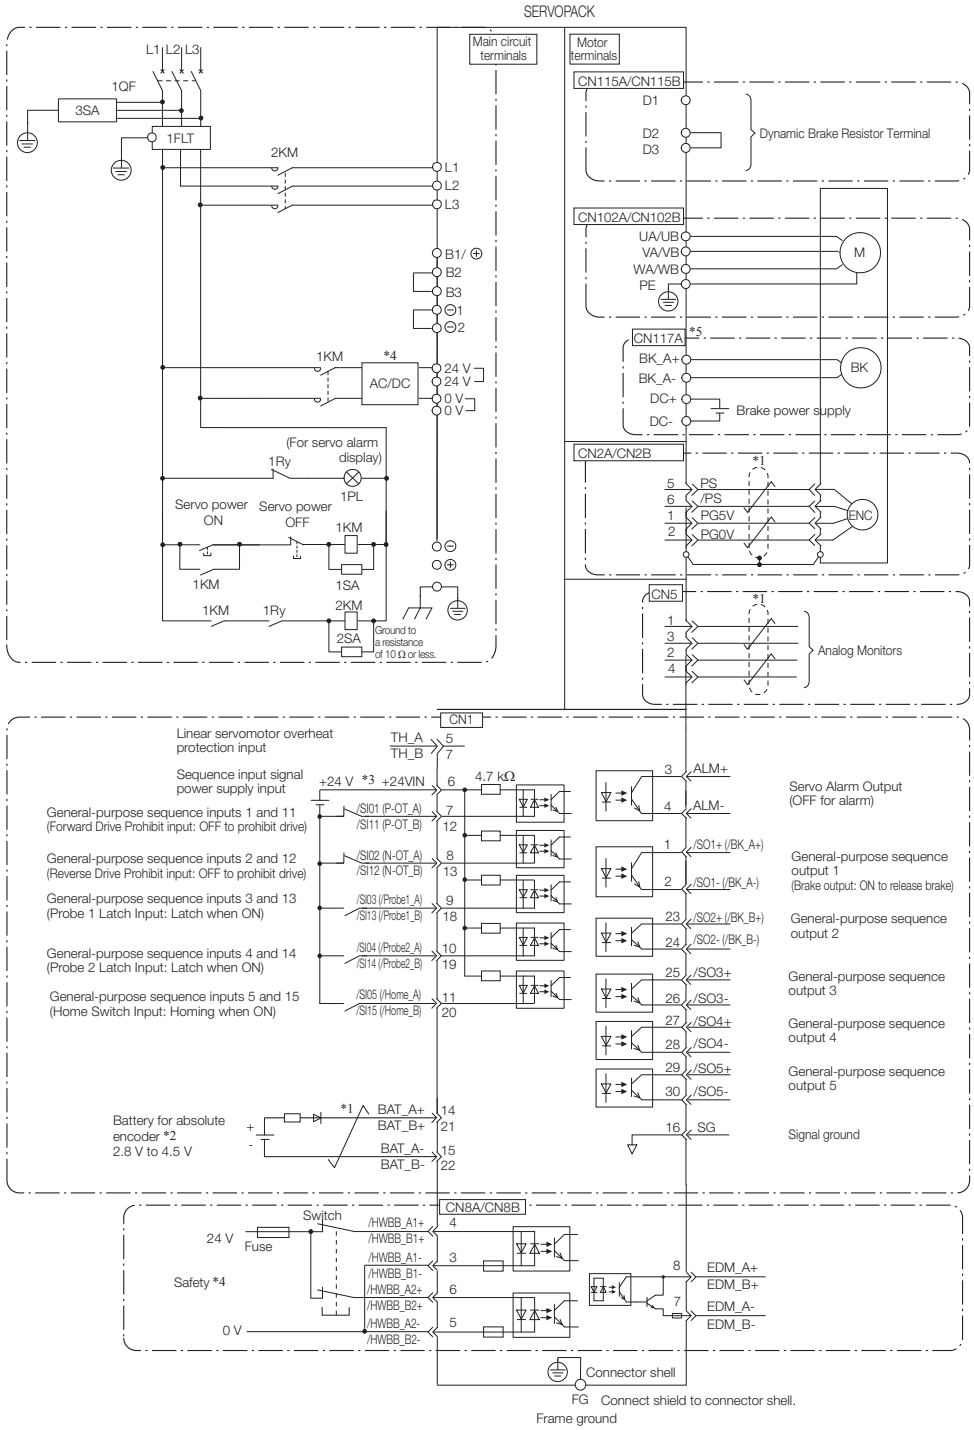
Mounting Hole Diagram

Approx. mass: 2R6D: 4.1 kg
5R4D: 4.3 kg

Unit: mm

System configurations up to 2×1.5 kW

SGD7W dual-axis EtherCAT reference SERVOPACKs



*1. represents twisted-pair wires.

*2. Connect these when using an absolute encoder. If the Encoder Cable with a Battery Case is connected, do not connect a backup battery.

*3. The 24-VDC power supply is not provided by Yaskawa. Use a 24-VDC power supply with double insulation or reinforced insulation.

*4. Use an SELV-compliant power supply according to EN/IEC 60950-1 to input 24 VDC to the control power supply input terminals.

*5. The CN117 connector is used for SERVOPACKs with built-in Servomotor brake control. SERVOPACKs without built-in Servomotor brake control do not have the CN117 connector.

Note: 1. You can use parameter settings to change some of the I/O signal allocations.

2. If you use a 24-V brake, install a separate power supply for the 24-VDC power supply from other power supplies, such as the one for the I/O signals of the CN1 connector. If the power supply is shared, the I/O signals may malfunction.

3. Default settings are given in parentheses.

System configurations up to 2×1.5 kW

SGD7W dual-axis MECHATROLINK-III reference SERVOPACKs

Cables for SERVOPACKs

Important

1. Use the cable specified by Yaskawa for the computer cable.
   Operation may not be dependable with any other cable.

Notes:
Refer to the manual for the following information. Cable dimensional drawings and cable connection specifications.
Order numbers and specifications of individual connectors for cables. Sigma-7-Series AC Servo Drive Peripheral Device Selection Manual.

Name		Length (L)	Order Number	Appearance
Analog Monitor Cable		1 m	JZSP-CA01-E	
Digital Operator (including 1 m cable)		1 m	JUSP-OP05A-1-E	
Digital Operator Cable		0.3 m	JZSP-CVS07-A3-E*2	Computer Cable		2.5 m	JZSP-CVS06-02-E	Safety Function Device Cable	Cables with Connectors*1	1 m	JZSP-CVH03-01-E-G#			3 m	JZSP-CVH03-03-E-G#	
	Connector Kit*2		Contact Tyco Electronics Japan G.K. Product name: Industrial Mini I/O D-shape Type 1 Plug Connector Kit Model number: 2013595-1	
MECHATROLINK-III EtherCAT PROFINET Communications Cables*3		0.2 m	CM3R☐M0-00P2-E			0.5 m	CM3R☐M0-00P5-E	
		1 m	JZSP-CM3R☐M0-01-E	
		3 m	JZSP-CM3R☐M0-03-E	
		5 m	JZSP-CM3R☐M0-05-E	
		10 m	JZSP-CM3R☐M0-10-E	
		20 m	JZSP-CM3R☐00-20-E	
		30 m	JZSP-CM3R☐00-30-E	
		40 m	JZSP-CM3R☐01-40-E	
		50 m	JZSP-CM3R☐01-50-E	

Cables are manufactured with an accuracy of one decimal place. Customized cable length possible (e.g. 07A5 for 7.5 m).

*1. When using the safety function, connect this cable to the safety devices.
Even when not using the safety function, use SERVOPACKs with the Safe Jumper Connector (model: JZSP-CVH05-E) connected.
*2. Use the connector kit when you make cables yourself.
*3. This cable is available in two variants. The order number for these cables differs at the marked ☐, an „R“ at this place is used for Cables with RJ45 Connectors on both ends, while an „M“ is used for Cables with RJ45 Connector on One End and IMI Connector on the other End.

Motor connection shielding clamp

Shielding clamp mountable on Sigma-7 400 V SERVOPACKs up to 15 kW.
Contact your Yaskawa representative for more information.

SERVOPACK Model	Order No.	Specification
Sigma-7 400 V up to 3.0 kW	KLBUE 4-13.5_SC	Sigma-7 400 V from 5 kW up to 7.5 kW	KLBUE 10-20_SC	
Sigma-7 400 V for 11 kW & 15 kW	KLBUE 15-32_SC

FSoE safety module with optional I/Os

When it comes to safety, compromises are not an option. That‘s why Yaskawa Sigma-7 servodrives easily integrate into FSoE safety concepts. Up to 16 available safety functions, 10 of them can work in parallel. This allows secure and easy control even for the most complex applications. Sigma-7 safety modules enable high performance safe motion for your application.

Seamless integration of safety

Sigma-7 safety modules integrate seamlessly into the SERVOPACK. Therefore, both safe and non-safe axes have the same dimensions resulting in easier planning and maximum flexibility.

Option Modules Advanced Safety

Option modules for advanced safety

The advanced safety modules for Sigma-7 series servo drives allow an expandability of the servo amplifier's functionality. It implements safety functions that conform to EN ISO 13849-1 up to SIL3/ PLe and are specified in the individual IEC 61800-5-2 standard. In combination with EtherCAT® Servopacks with function type FT91 these modules enable optimum safety in a machine according to industry needs.
Two different modules are available in order to cover safety related demands in the field.

Safety functions (IEC 61800-5-2)

Type	Short	Function	Applicable Advanced Safety Modules	
			SGD7S-OSB01A	SGD7S-OSB02A
Safe Switch-Off (Safe BaseBlock Function)		Safe Torque Off This function shuts OFF the power supply to the motor by executing the HWBB function of the SERVOPACK according to the safety request input state. The drive cannot generate any hazardous movements. If STO is activated when the drive is moving, the motor will run down in an uncontrolled manner.	√	√
Safe Standstill		Safe Stop 1, deceleration monitored and time controlled The safety module will activate STO: • if the speed limit is exceeded during deceleration • after the monitoring time has elapsed	√	√
Safe Standstill		Safe Stop 1, deceleration time controlled The safety module will activate STO: • after the monitoring time has elapsed	√	√
Safe Standstill		Safe Stop 2, deceleration monitored and position monitored The safety module will activate STO: • if the speed limit is exceeded during deceleration The safety module will activate SOS: • after the monitoring time has elapsed (provided that no limit violation has occurred during deceleration). If the position deviation exceeds the limit, the safety module will activate STO.	√	√
Safe Standstill		Safe Stop 2, deceleration time controlled and position monitored The safety module will activate SOS: • after the monitoring time has elapsed. If the position deviation exceeds the limit, the safety module will activate STO.	√	√
Safe Standstill		Safe Operating Stop On safety function execution request, the safety module will switch to position monitoring. If the position deviation exceeds the limit, the safety module will activate STO.	√	√
Safe Motion		Safely Limited Speed On safety function execution request, the safety module starts to monitor the speed (first deceleration monitoring, then constant speed monitoring). If any speed limit is violated, the safety module will activate the selected stopping method, for example STO (default).	√	√
Safe Motion		Safely Limited Acceleration This function monitors the acceleration operation of the motor according to the safety request input state. If the specified acceleration speed is exceeded, the selected motor stopping method will be applied, for example STO (default).	√	√

Type	Short	Function	Applicable Advanced Safety Modules	
			SGD7S-OSB01A	SGD7S-OSB02A
Safe Motion		Safe Speed Range This function adds minimum speed monitoring to the SLS function. In other words, the maximum speed must not exceed a certain value, and the minimum speed must not drop below a certain value. If either of these limits is violated, the selected motor stopping method will be applied, for example STO (default).	√	√
Safe Motion		Safe Direction This function prevents the motor from moving in an invalid direction, it can only move in one (defined) direction. If the specified direction is violated, the safety module will activate STO.	√	√
Safe Positioning		Safely Limited Position This function monitors the end positions of previously defined ranges. If the actual position exceeds the limits, the safety module will activate the selected stopping methos, for example STO (default).	√	√
Safe Positioning		Safely Limited Increment This function monitors the movements of the drive for compliance with a defined increment. The reference position is defined when monitoring is activated. If a limit value is violated, the safety module will activate STO.	√	√
Safe Motion		Safely Limited Torque This function monitors the torque and compares the limit. If the torque limit is violated, the safety module will activate the selected stopping method, for example STO (default).	–	√
Safe Monitoring		Safe Motor Temperature This function monitors the temperature and compares it to the limit values. If the temperature limit is violated, the safety module will deactivate (Low Output) the assigned safe output. Please note that this is a monitoring function that does not activate a stopping method after a limit violation.	–	√
Safe Motion		Safe CAM This function provides a safe output signal to indicate whether the motor shaft position is within a specified range. If the actual position exceeds the limits, the safety module will activate the configured safe output signal. Please note that this function does not activate a stopping method after a limit violation.	√	√
Safe Monitoring		Safe Speed Monitor This function provides a safe output signal to indicate whether or speed is below a specified limit. If the speed limit is violated during constant speed monitoring, the safety module will activate the configured safe output signal. Please note that this is a monitoring function that does not activate a stopping method after a limit violation.	√	√

Option Module Safety

Sigma-5 option module safety

The Safety Module for Sigma-7 series servodrives allows an expandability of the servo amplifier's functionality. It implements safety functions that conform to EN ISO 13849-1 and are specified in the individual IEC 61800-5-2 standard. You can combine it with a Sigma-7 400 V SERVOPACK to design optimum safety in a machine system according to industry needs.

SERVOPACKs, Option Module Safety and Mounting Rail need to be ordered separately.

Support for functions defined in IEC61800-5-2

Safety functions are implemented by using the hard wire base block (HWBB) in the SERVOPACK.

Safety Function	Description	Applicable Products			
		SGD7S SGD7W Axis A + B	SGD7S + Safety Module	SGD7W Axis A + Safety Module	SGD7W Axis B
Safe BaseBlock Function* (SBB function)	This safety function is equivalent to an STO function. (It shuts OFF the power supply from the SERVOPACK to the motor.)	√	√	√	√
Safe BaseBlock with Delay Function (SBB-D function)	This safety function is equivalent to an SS1 function. (It monitors the deceleration operation of the motor for the specified time and then shuts OFF the power supply from the SERVOPACK to the motor.)	—	√	√	—
Safe Position Monitor with Delay Function (SPM-D function)	This safety function is equivalent to an SS2 function. (It monitors the deceleration operation of the motor for the specified time and then monitors the position after the motor stops.)	—	√	√	—
Safely Limit Speed with Delay Function (SLS-D function)	This safety function is equivalent to an SLS function. (It monitors the deceleration operation of the motor for the specified time and then monitors the speed of the motor to confirm that it remains in the allowable range.)	—	√	√	—

* In combination with a Option Module Safety, the selection of Safe BaseBlock Function (Safe Torque Off) is possible on SERVOPACK CN8 or Option Module Safety.

SERVOPACK		Safety Module	Safe Performance: SERVOPACK CN8□	Safe Performance: Safety Module
SGD7S		SGDV-OS01A	CN8: Not apply (*2)	Apply
		SGDV-OS01A000FT900	CN8: Apply	Apply
SGD7W	Axis A*1	SGDV-OS01A	Apply	Apply
	Axis B*1	-	CN8B: Apply	-
SGD7W	Axis A	SGDV-OS01A000FT900	CN8A: Apply	Apply
	Axis B	-	CN8B: Apply	-

*1 When the Safety Module is attached to the SGD7W, the Safety Module operates for Axis A only.
*2 A safety jumper connector should be connected for not applied CN8□.

Specifications and ratings

Basic specifications

Item		Specification	
Placement		Attached to the SERVOPACK	
Power Specification	Power Supply Method	Supplied from the control power supply of the SERVOPACK.	
Operating Conditions	Ambient Air Temperature	0°C to +55°C	
	Storage Temperature	–20°C to +85°C	
	Surrounding Air Humidity / Storage Humidity	90 % relative humidity max.	No freezing or condensation.
	Vibration Resistance	4.9 m/s^2	
	Shock Resistance	19.6 m/s^2	
	Protection Class / Pollution Degree	Protextion class: IP10, Pollution Degree: 2 An environment that satisfies the following conditions. • Free of corrosive or explosive gases. • Free of exposure to water, oil or chemicals. • Free of dust, salts or iron dust.	
	Altitude	1,000 m max.	
	Others	Free of static electricity, strong electromagnetic/magnetic fields, or radioactivity.	

Compliance with UL Standards, EU Directives, and other safety standards (in combination with SERVOPACK)

Option Module Feedback

Fully-closed module

The Feedback Modules for Sigma-7 series servodrives allow an expandability of the servo amplifier's functionality. With fully-closed control, an externally installed encoder is used to detect the position of the controlled machine and the machine's position information is fed back to the SERVOPACK. High-precision positioning is possible because the actual machine position is fed back directly. To perform fully-closed loop control, a Fully-Closed Module and SERVOPACK are required.

SERVOPACKs, Option Module Feedback and Mounting Rail need to be ordered separately.

Fully-closed module

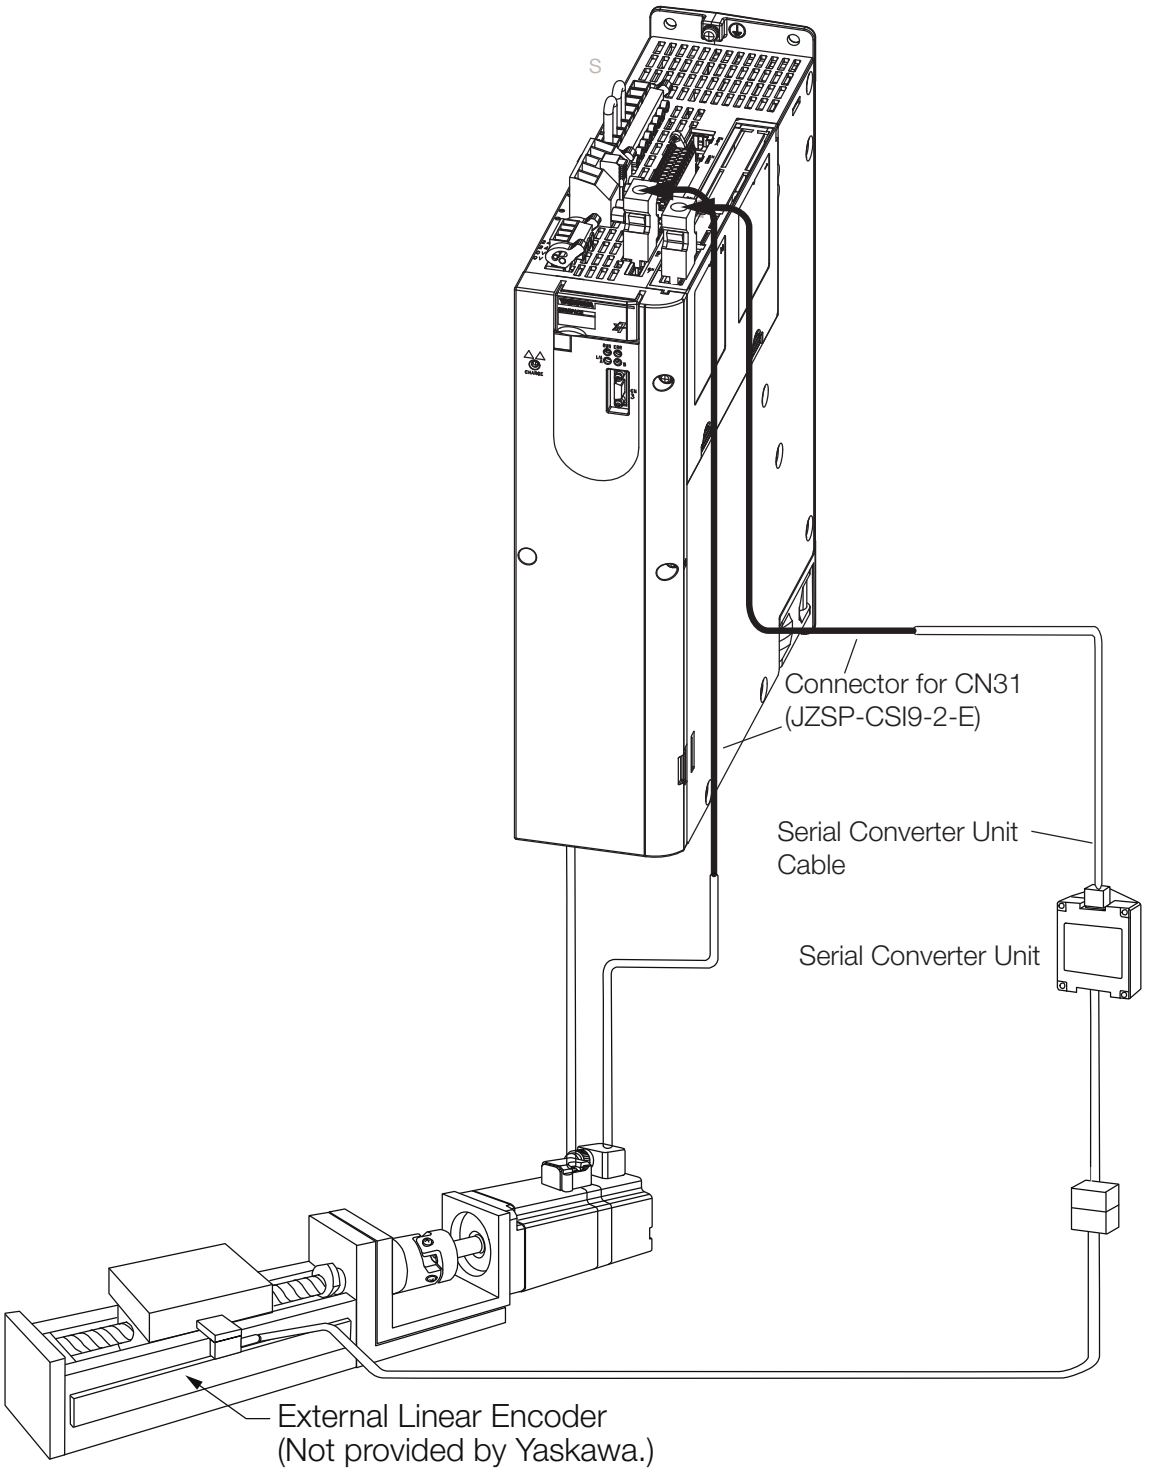
Model designation	Description
SGDV-OFA01A	Feedback Option Module for Yaskawa Serial Protocol
SGDV-OFB01A	Feedback Option Module for Serial and Sin/Cos Encoders
SGDV-OFB03A	Feedback Option Module for Pulse A quad B Encoders
SGDV-OFB04A	Feedback Option Module for Resolver

Mounting rail for option modules

Mounting rail for option modules for Sigma-7 400 V SERVOPACKs.
Contact your Yaskawa representative for more information.

SERVOPACK Model	Order No.	Specification
All Models	JZSP-P7R2-8-E	

System configuration with SGDV-OFA01A

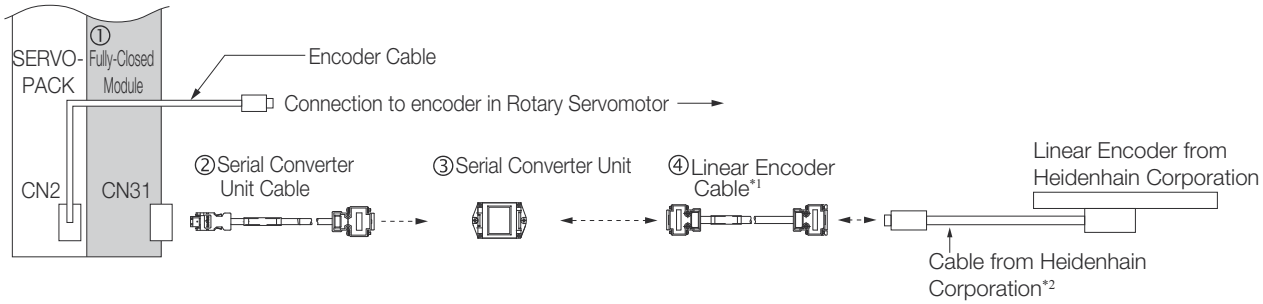


* The connected devices and cables depend on the type of external Linear Encoder that is used.
Note: Refer to the following section for the information on peripheral devices or chapter Peripheral Devices.

Connections to linear encoder from Heidenhain Corporation

Connections for a 1 Vp-p Analog Voltage Output Signal

You must make the connections through a Yaskawa Serial Converter Unit. The output signal will be multiplied by 8 bits (256 divisions) in the Serial Converter Unit.



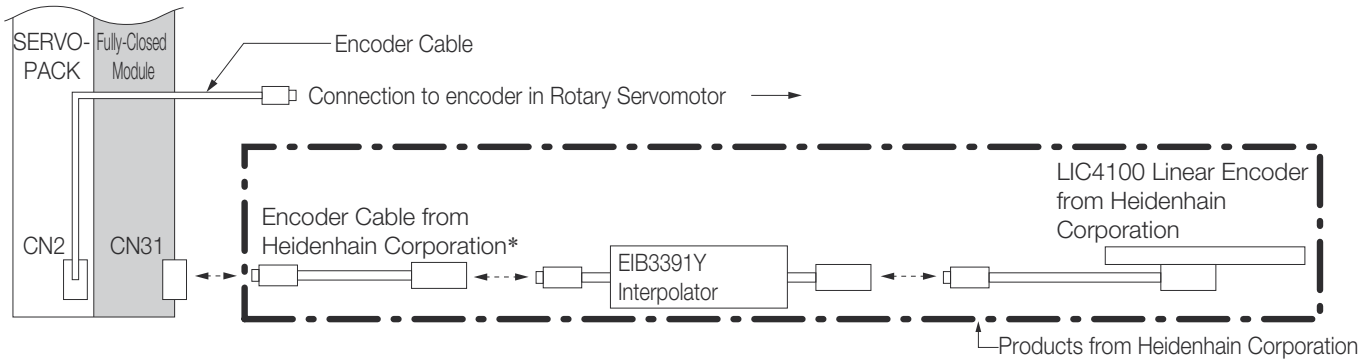
*1. When using a JZDP-J00□-□□□Serial Converter Unit, do not use a Yaskawa Linear Encoder Cable that is longer than 3 m.
*2. Contact Heidenhain Corporation for details on cables (analog 1 Vp-p output, D-sub 15-pin, male) from Heidenhain Corporation.

No.	Item	Model
①	Fully-Closed Module (Purchased alone)	Fully-Closed Module*1 SGDV-OFA01A
②	Serial Converter Unit Cable	JZSP-CLP70-□□*3-E
③	Serial Converter Unit*2	JZDP-H003-000
④	Linear Encoder Cable	JZSP-CLL30-□□*3-E

*1 When ordering a SERVOPACK and a Fully-Closed Module separately, use this Fully-Closed Module model number. Please use the Yaskawa mounting rail JZSP-P7R2-8-E in combination with a Fully-Closed Module.
*2 Contact your Yaskawa representative for specific information.
*3 The boxes (□□) in the model number are reolaced with cable length when ordering. (1m = 01, 3m = 03, 5m = 05, 10m = 10, 15m = 15)

Connections when using a Yaskawa serial interface for the output signals

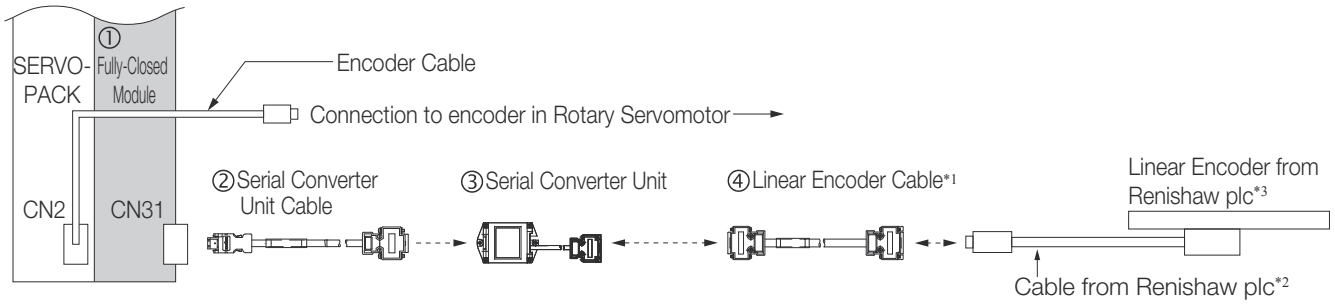
LIC4100 Linear Encoder with EIB3391Y Interpolator



* Use an Encoder Cable from Heidenhain Corporation. Contact Heidenhain Corporation for detailed Encoder Cable specifications.

Connections to linear encoder from Renishaw Plc

Connections for a 1 Vp-p Analog Voltage Output Signal



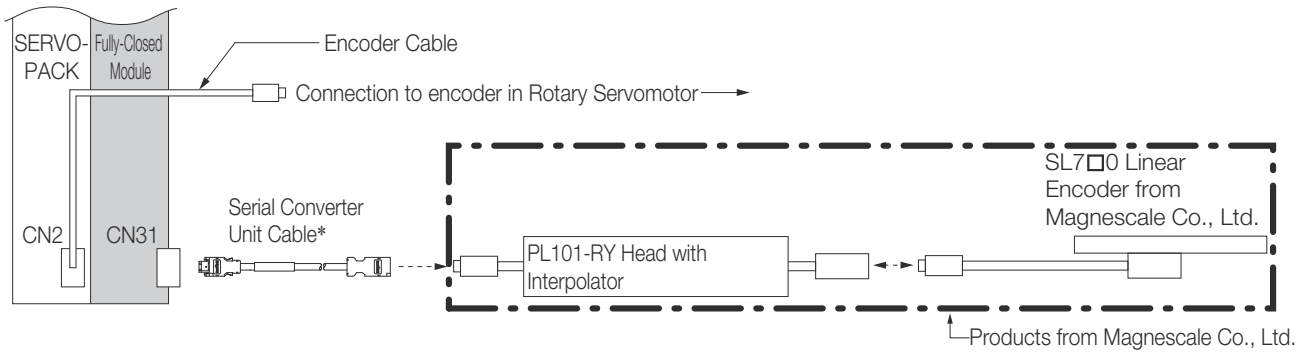
*1 When using a JZDP-J00□-□□□ Serial Converter Unit, do not use a Yaskawa Linear Encoder Cable that is longer than 3 m.
*2 Contact Renishaw plc for details on cables (analog 1 Vp-p output, D-sub 15-pin, male) from Renishaw plc.
*3 If you use the origin signals with a Linear Encoder from Renishaw plc, the origin may sometimes be falsely detected. If that occurs, use the BID/DIR signal to output the origin signal only in one direction.

No.	Item	Model
①	Fully-Closed Module (Purchased alone)	Fully-Closed Module*1 SGDV-OFA01A
②	Serial Converter Unit Cable	JZSP-CLP70-□□*3-E
③	Serial Converter Unit*2	JZDP-H005-000
④	Linear Encoder Cable	JZSP-CLL00-□□*3-E

*1 When ordering a SERVOPACK and a Fully-Closed Module separately, use this Fully-Closed Module model number. Please use the Yaskawa mounting rail JZSP-P7R2-8-E in combination with a Fully-Closed Module.
*2 Contact your Yaskawa representative for specific information.
*3 The boxes (□□) in the model number are reolaced with cable length when ordering. (1m = 01, 3m = 03, 5m = 05, 10m = 10, 15m = 15)

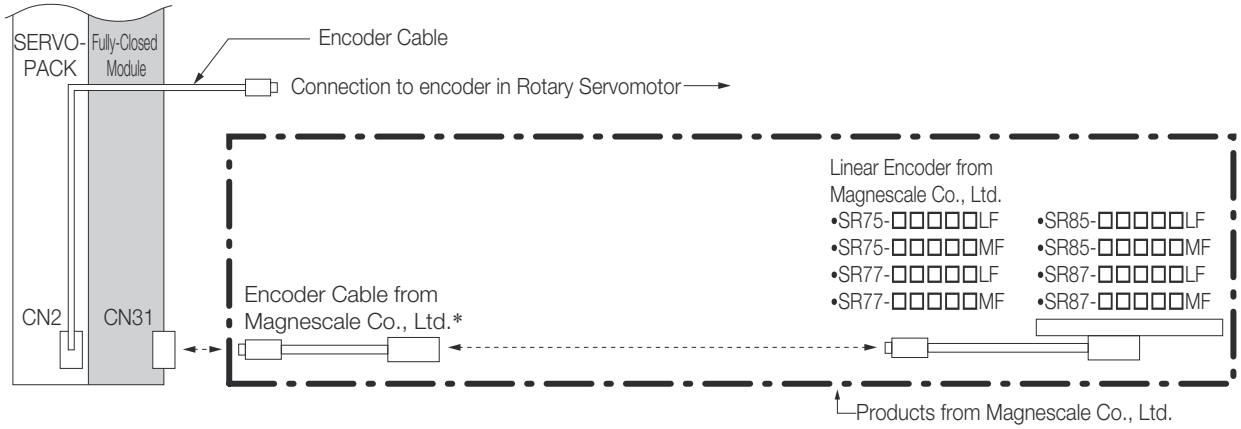
Connections to linear encoder from Magnescale Co., Ltd.

SL7□0 Linear Encoder and PL101-RY Sensor Head with Interpolator



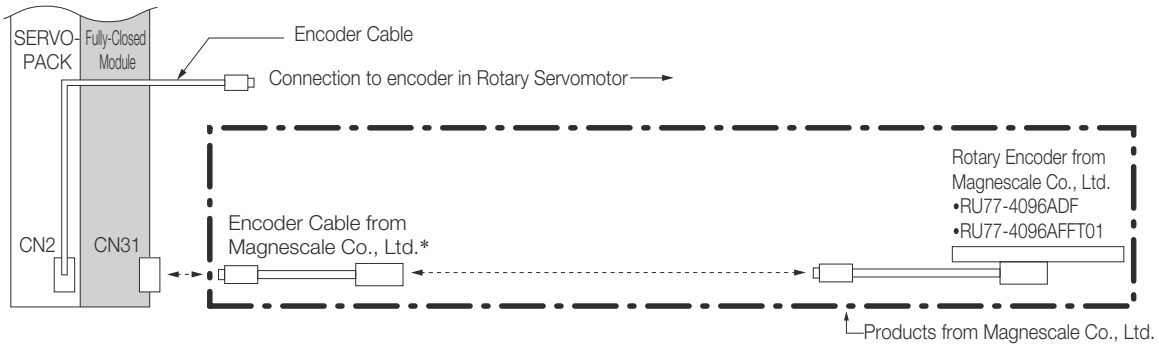
* Refer to the following section for information on cables to connect Fully-Closed Modules and Linear Encoders or chapter Serial Converter Unit Cables.

SR-75, SR-77, SR-85, and SR-87 Linear Encoders



* To connect the SERVOPACK and Linear Encoder, use a CH33-xx□□G Cable from Magnescale Co., Ltd. (This Cable has connectors designed for use with Yaskawa products).

RU77-4096ADF/RU77-4096AFFT01 Absolute Rotary Encoders

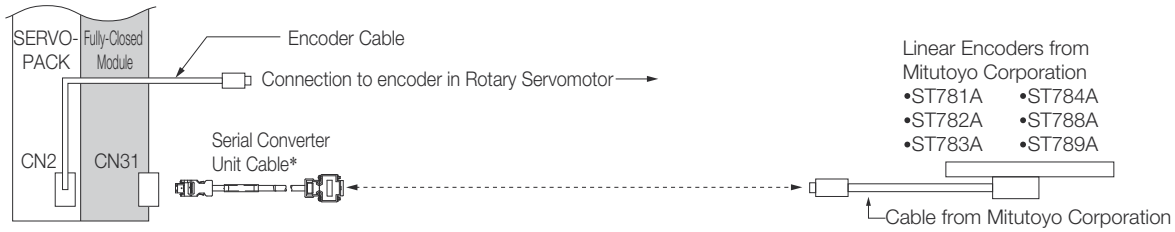


*To connect the SERVOPACK and Rotary Encoder, use a CE28-Series Extension Cable for RU77 from Magnescale Co., Ltd.

Note: The RU77 is a single-turn absolute rotary encoder.

Connections to linear encoders from Mitutoyo Corporation

ST78□A Linear Encoders



* Refer to the following section for information on cables to connect Fully-Closed Modules and Linear Encoders or chapter Serial Converter Unit Cables.

Connectors

Device Label	Model	Yaskawa Order No.	Number of Pins	Manufacturer

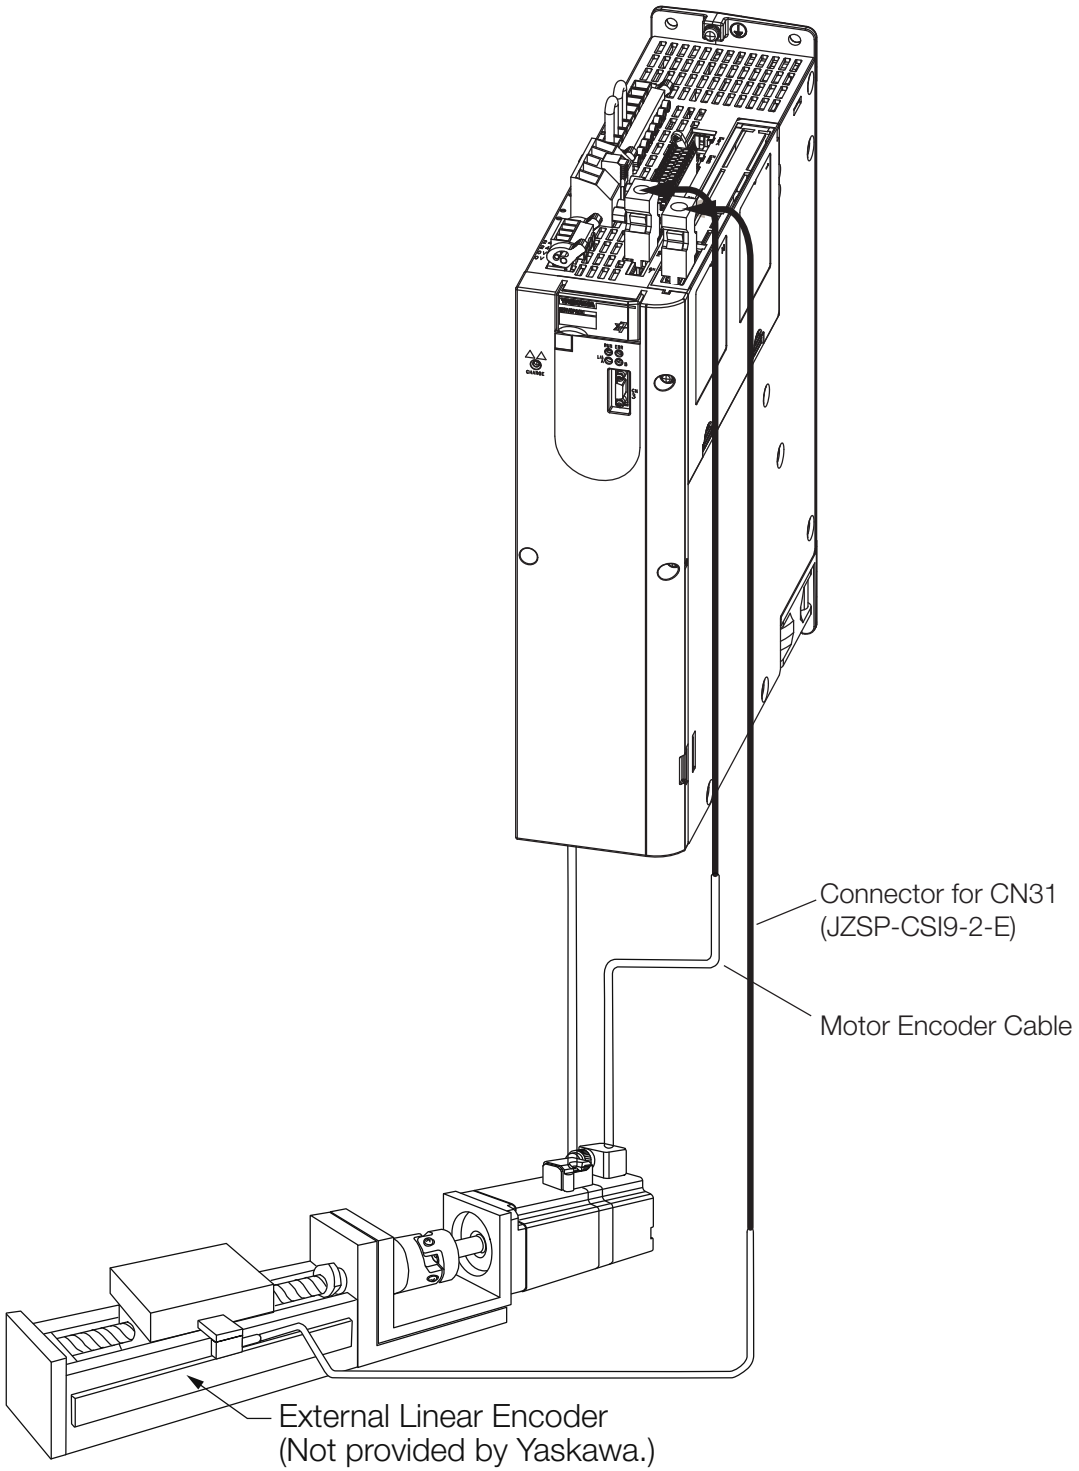
Note: The above connecor or their equivalent are used for the Fully-Closed Module.

System configuration with SGDV-OFB0□A



Standard specifications

Encoder Type		Specifications	
EnDat 2.2	Encoder Supply	Output voltage	Typ. 5 V
	Serial Interface (Synchronous)	Signal transfer	RS485
		Max. Baud rate	16 MHz
EnDat 2.1	Encoder Supply	Output voltage	Typ. 5 V
	Serial Interface (Synchronous)	Signal transfer	RS485
		Max. Baud rate	2 MHz
	Sine-Cosine input	Signal transfer	Differential signals, symmetric
		Differential voltage	0.5 to 1.25 Vss
		Terminating resistor	124 Ohm
		Signal frequency	250 kHz
		Resolution	13-bits (8192)
Hiperface	Encoder Supply	Output voltage	7 to 12 V
	Serial Interface (Asynchronous)	Signal transfer	RS485
		Max. Baud rate	38.4 MHz
	Sine-Cosine input	Signal transfer	Differential signals, symmetric
		Differential voltage	0.5 to 1.25 Vss
		Terminating resistor	124 Ohm
		Signal frequency	250 kHz
		Resolution	13-bits (8192)
Sine-Cosine Encoder	Encoder Supply	Output voltage	Typ. 5 V
	Sine-Cosine input	Signal transfer	Differential signals, symmetric
		Differential voltage	0.5 to 1.25 Vss
		Terminating resistor	124 Ohm
		Signal frequency	250 kHz
		Resolution	13-bits (8192)
	Reference input	Signal transfer	Differential signals, symmetric
		Differential voltage	0.2 V or more
		Terminating resistor	124 Ohm

Option module feedback set-up for fully-closed loop control

The encoder parameters must be written into the module via the SERVOPACK using the SigmaWin+ engineering tool. Ask Yaskawa for preparation encoder parameter file for fully-closed loop.

Procedure to download the encoder parameter via SigmaWin+ version 7.2x via Sigma-7 400 V to option module feedback

1. Install a motor, encoder and SERVOPACK.
2. In SigmaWin+ select “Parameters > Parameter edit”. Set parameter Pn002.3 = 1 or 3.
3. Start “Setup > Motor parameter scale write” in SigmaWin+.
4. Write configuration file to option module feedback.

Note: Refer to SigmaWin+ Operation manual for information on how to write parameters using SigmaWin+.

General specification SGDV-OFB01A

Item		Specification
Applicable SERVOPACK		All Sigma-7 Series SERVOPACKs
Applicable SERVOPACK Firmware Version		Version 0023 or later
Placement		Attached to the SERVOPACK
Power Specification	Power Supply Method	Supplied from the control power supply of the SERVOPACK.
Operating Conditions	Surrounding Air / Storage Temperature	0°C to +55 °C / -20 °C to +85 °C
	Ambient / Storage Humidity	90% RH or less (with no condensation)
	Vibration / Shock Resistance	4.9 m/s^2 / 19.8 m/s^2
	Protection Class / Pollution Degree	Protection class: IP10, Pollution degree: 2 An environment that satisfies the following conditions. • Free of corrosive or explosive gases • Free of exposure to water, oil or chemicals • Free of dust, salts or iron dust
	Altitude	1,000 m or less
	Others	Free of static electricity, strong electromagnetic fields, magnetic fields or exposure to radioactivity
Supported motors		Permanent magnet, Synchronous AC rotary or linear motor
Max. output frequency range		Must be lower than 500 [rev/sec]. Note: UL application: 400 [rev/sec] (200 V), 300 [rev/sec] (400 V). If UL is needed, the combination should be applied to UL on customer side.
Supported scales for motor driving usage		EnDat2.1, EnDat2.2, HIPERFACE, Sin/Cos
Supported scales for fully-closed usage		EnDat2.1, EnDat2.2, HIPERFACE, Sin/Cos
Motor pole information for motor driving	Without hall sensor signals	Sigma-5 detecting function is available. In case of EnDat2.1, EnDat2.2 and HIPERFACE, the function should be carried out once (after that, recognized data will be used). In other cases, the function should be carried out each boot-up.
	With hall sensor signals	The data is used (any functions needed for the information).
Unsupported devices		Advanced option module safety: SGDV-OSA01A Fully-closed option module: SGDV-OFA01A

Device	Enquires
Noise Filters	EPA GmbH
Surge Absorbers	Yaskawa Controls Co., Ltd.
DC Reactors	
Magnetic Contactors	Fuji Electric FA Components & Systems Co., Ltd.

*1. Some Noise Filters have large leakage currents. The grounding conditions also affect the size of the leakage current.
If necessary, select an appropriate leakage detector or leakage breaker taking into account the grounding conditions and the leakage current from the Noise Filter.
*2. The last digit of an RoHS-compliant serial number is R. Consult with Yaskawa Controls Co., Ltd. for RoHS-compliant reactors.
*3. Can be installed separate or as footprint filter.

Note: 1. Consult the manufacturer for details on s.
2. Refer to the following section for information on Digital Operator Converter Cables.
3. Refer to the -7 Series AC Servo Drive Peripheral Device Selection Manual (Manual No. SIEP S800001 32) for the following information.
• Dimensional drawings, ratings, and specifications of peripheral devices.

Molded-case circuit bbreakers and fuses

Use a molded-case circuit breaker and fuse to protect the power supply line. They protect the power line by shutting OFF the circuit when overcurrent is detected. Select these devices based on the information in the following tables.

Notes:
To comply with the Low Voltage Directive, always connect a fuse to the input side to protect against short-circuit accidents. Select fuses or molded-case circuit breakers that are compliant with UL standards. The following tables provide the net values of the current capacity and inrush current.
Select a fuse and a molded-case circuit breaker that meet the following conditions.
- Main circuit and control circuit: No breaking at three times the current value given in the table for 5 s.
- Inrush current: No breaking at the current value given in the table for 20 ms.

Main Circuit Power Supply	Maximum Applicable Motor Capacity [kW]	Model		Power Supply Capacity per SERVOPACK [kVA]	Current Capacity		Inrush Current

SERVOPACK main circuit wires

This section describes the main circuit wires for SERVOPACKs.

Important

These specifications are based on IEC/EN 61800-5-1, UL 61800-5-1, and CSA C22.2 No.14.
1. To comply with UL standards, use UL-compliant wires.
2. Use copper wires with a rated temperature of 75° or higher.
3. Use copper wires with a rated withstand voltage of 300 V or higher.

Note:
To use 600-V heat-resistant polyvinyl chloride-insulated wire (HIV), use the following table as reference for the applicable wires.
- The specified wire sizes are for three bundled leads when the rated current is applied with a surrounding air temperature of 40°C.
- Select the wires according to the ambient temperature.

Three phase, 400 V wires for SGD7S SERVOPACKs

Cables	Terminal Symbol	SERVOPACK Model SGD7S-									
		1R9D	3R5D	5R4D	8R4D	120D	170D	210D	260D	280D	370D
Main Circuit Power Cable	L1, L2, L3	AWG 16 (or 1.5 mm²)			AWG 14 (or 2.5 mm²)		AWG 12 (or 4.0 mm²)		AWG 10 (or 6.0 mm²)	AWG 8 (or 10 mm²)	
Servomotor Main Circuit Cable	U, V, W	AWG 16 (or 1.5 mm²)			AWG 14 (or 2.5 mm²)		AWG 12 (or 4.0 mm²)	AWG 10 (or 6.0 mm²)		AWG 8 (or 10 mm²)	
Control Power Cable	24V, 0V	AWG 16 (or 1.5 mm²)									
External Regenerative Resistor Cable	B1/ ⊕,B2	AWG 16 (or 1.5 mm²)					AWG 14 (or 2.5 mm²)	AWG 12 (or 4.0 mm²)		AWG 10 (or 6.0 mm²)	AWG 8 (or 10 mm²)
Ground Cable	⏚	AWG 16 (or 1.5 mm²)			AWG 14 (or 2.5 mm²)		AWG 12 (or 4.0 mm²)		AWG 10 (or 6.0 mm²)	AWG 8 (or 10 mm²)	

Three phase, 400 V wires for SGD7W SERVOPACKs

Cables	Terminal Symbol	SERVOPACK Model SGD7W-	
		2R6D	5R4D
Main Circuit Power Cable	L1, L2, L3	AWG 14 (or 2.5 mm²)	
Servomotor Main Circuit Cable	U, V, W	AWG 16 (or 1.5 mm²)	
Control Power Cable	24V, 0V	AWG 16 (or 1.5 mm²)	
External Regenerative Resistor Cable	B1/ ⊕,B2	AWG 16 (or 1.5 mm²)	
Ground Cable	⏚	AWG 14 (or 2.5 mm²)	

Wire types

The following table shows the wire sizes and allowable currents for three bundled leads.

HIV Specifications*		Allowable Current at Ambient Temperatures [A]		
Nominal Cross-selectional Area [mm²]	Configuration [Wires/mm²]	30°C	40°C	50°C
0.9	37/0.18	15	13	11
1.25	50/0.18	16	14	12
2.0	7/0.6	23	20	17
3.5	7/0.8	32	28	24
5.5	7/1.0	42	37	31
8.0	7/1.2	52	46	39
14.0	7/1.6	75	67	56
22.0	7/2.0	98	87	73

* This is reference data based on JIS C3317 600-V-grade heat-resistant polyvinyl chloride-insulated wires (HIV).

Surge absorbers for holding brakes (Varistors) and diodes

Surge absorbers for holding brakes (Varistors)

Select an appropriate Surge Absorber for the power supply voltage and current of the brake.
Surge absorbers are not provided by Yaskawa.

Brake Power Supply Voltage		24 VDC	
Surge Absorber Manufacturer		Nippon Chemi-Con Corporation	SEMITEC Corporation
Brake Rated Current	1 A max.	TNR5V121K	Z5D121
	2 A max.	TNR7V121K	Z7D121
	4 A max.	TNR10V121K	Z10D121
	8 A max.	TNR14V121K	Z15D121

Regenerative resistors

Types of regenerative resistors

The following regenerative resistors can be used:
- Built-in regenerative resistors: Some models of SERVOPACKs have regenerative resistors built into them.
- External regenerative resistors: These resistors are used when the internal capacitor and built-in regenerative resistor in the SERVOPACK cannot consume all of the regenerative power.
  Use Yaskawa's SigmaSize+, an AC Servo drive capacity selection program, to determine if a regenerative resisitor is required.

Note: If you use an external regenerative resistor, you must change the setting parameter Pn600.

Built-in regenerative resistor

The following table gives the specifications of the built-in regenerative resistors in the SERVOPACKs and the amount of regenerative power (average values) that they can process. A built-in regenerative resistor is provided as a standard feature. Install an external regenerative resistor when the built-in regenerative resistor cannot process all the regenerative power.

SERVOPACK Model		Built-In Regenerative Resistor		
SGD7S-	SGD7W-	Resistance [Ω]	Capacity [W]	Minimum Allowable Resistance [Ω]
1R9D, 3R5D	-	75	70	75
5R4D	-		140	
8R4D, 120D	-	43		43
170D	-	27	180	27
-	2R6D	43	140	43
-	5R4D			

External regenerative resistor

SERVOPACK Specification			Resistor Specification			
SERVOPACK		Minimum Allowable External Resistance [Ω]	Model Resistor	Resistance [Ω]	Power [W]	Manufacturer

	370D					
SGD7W-	2R6D	7.5	-	-	-	-
	5R4D		-	-	-	-

Note:
Contact your Yaskawa representative for information on Sigma-7 400V Dynamic Brake Resistors.

Calculate the energy that must be consumed by the resistance for one dynamic brake stop. To simplify the energy consumption calculation, assume that all the kinetic energy until the Servomotor stops is consumed by the dynamic brake resistor and use the following formula. Out of all possible operation patterns, use the one which maximizes the kinetic energy of the Servomotor.

Rotary Servomotors
Energy consumption of the dynamic brake resistor: E_{DB} [J]
Motor moment of inertia*: J_M [kgm2]
Load inertia: J_L [kgm2]
Motor speed just before stopping with the dynamic brake: N [min-1]

$$E_{DB} = \frac{1}{2} \times (J_M + J_L) \times \left(\frac{2\pi}{60} \times N\right)^2$$

* For detailed information on the motor moment of inertia, refer to the catalog or Servomotor product manual.

Linear Servomotors
Energy consumption of the dynamic brake resistor: E_{DB} [J]
Moving Coil mass*: m_M [kg]
Load mass: m_L [kg]
Motor speed just before stopping with the dynamic brake: v [m/s]

$$E_{DB} = \frac{1}{2} \times (m_M + m_L) \times v^2$$

* For detailed information on Moving Coil mass, refer to the catalog or Servomotor product manual.

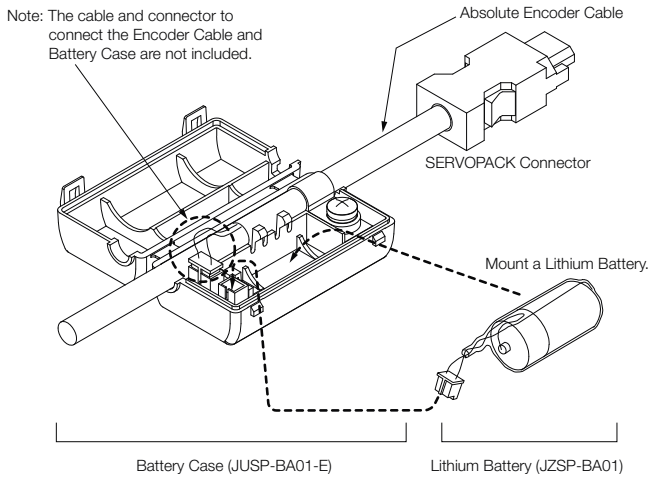
Batteries for servomotors with absolute encoders

If you use an absolute encoder, you can use an Encoder Cable with a Battery Case connected to it to supply power and retain the absolute position data. You can also retain the absolute position data by supplying power from a battery on the host controller. The Battery Case is sold as a replacement part for the Battery Case that is included with an Absolute Encoder Cable.

Name	Order Number	Remarks
Battery case (case only)	JUSP-BA01-E	The Encoder Cable and Battery are not included. (This is a replacement part for a damaged Battery Case.)
Lithium Battery	JZSP-BA01	This is a special battery that mounts into the Battery Case.

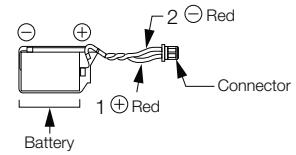
Important

1. You cannot attach the Battery Case to an Incremental Encoder Cable.
2. Install the Battery Case where the ambient temperature is between -5°C and 60°C.



• Mounting a battery in the battery case

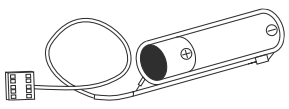
Obtain a Lithium Battery (JZSP-BA01) and mount it in the Battery Case.



ER3V (3.6 V, 1000 mAh) from Toshiba Battery Co., Ltd.

• Connecting a battery to the host controller

Use a battery that meets the specifications of the host controller. Use an ER6VC3N Battery (3.6 V, 2,000 mAh) from Toshiba Battery Co., Ltd. or an equivalent battery.



Software

SigmaSize+: AC servo capacity selection program

You can use the SigmaSize+ to select Servomotors and SERVOPACKs. There are two versions of the software: A Web-based version and a stand-alone version. The software supports all standard servo products sold by Yaskawa.

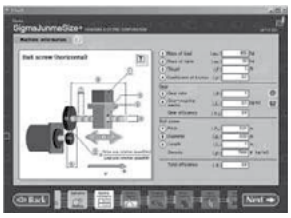
• Features

- Provides a vast amount of new product information.
- Lets you select servo products with a wizard.
- As long as you have a connection to the Internet, you can access and use the software anytime, anywhere. (Communications are encrypted for security)
- You can access and reuse previously entered data.

• Examples of the servo selection interface

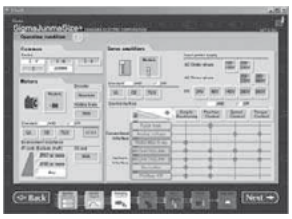
Mechanism Selection View

Machine Specification Entry View



Speed Diagram Entry View

Operating Conditions Selection View



Servomotor Selection View

SERVOPACK Selection View

• System requirements

Item	System requirement
Browser (Required for web-based version only)	Internet Explorer 5.0 SP1 or higher
OS	Windows XP, Windows Vista, Windows 7 (32-bit or 64-bit edition), Windows 10 (32-bit or 64-bit edition)
CPU	Pentium 200 MHz min.
Memory	64 MB min. (96 MB or greater recommended)
Available Hard Disk Space	20 MB min.

SigmaWin+ Version 7: AC servo drive engineering tool

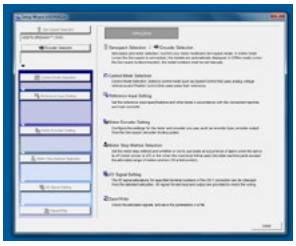
The SigmaWin+ Engineering Tool is used to set up and optimally tune Yaskawa Sigma-series Servo Drives.

• Features

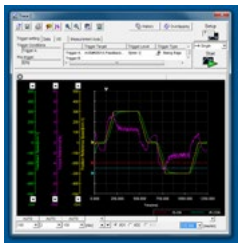
- Set parameters with a wizard.
- Display SERVOPACK data on a computer just like you would on an oscilloscope.
- Estimate moments of inertia and measure vibration frequencies.
- Display alarms and alarm diagnostics.

• Examples of the interface

Setting Parameters with a Wizard



Displaying SERVOPACK Data on a Computer Just Like You Would on a Oscilloscope



Estimating Moments of Inertia and Measuring Vibration Frequencies

Displaying Alarms and Alarm Diagnostics

• System requirements

Item	System requirement
Supported Languages	English and Japanese
OS	Windows XP, Windows Vista, or Windows 7 (32-bit or 64-bit edition)
CPU	Pentium 200 MHz min.
Memory	64 MB min. (96 MB or greater recommended)
Available Hard Disk Space	For Standard Setup: 350 MB min. (400 MB or greater recommended for installation)

Advanced safety module parameter editor

The advanced safety module parameter editor is required to set up and configure the advanced safety module.

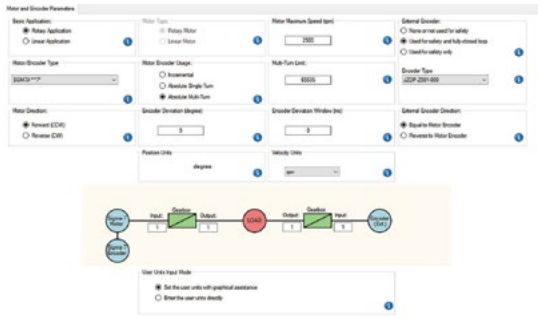
• Features

With the TÜV certified Advanced Safety Module Parameter Editor you can configure the Advanced Safety Module. The PC configuration tool is used to create a safety project which contains the following safety settings:

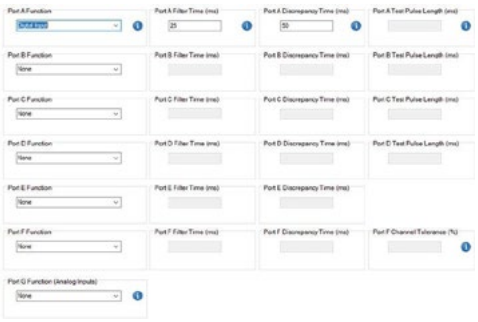
- General Device Parameters
- Motor and Encoder Parameters
- User Unit and Encoder Parameters
- I/O Configuration
- Safety Functions

• Examples of the interface

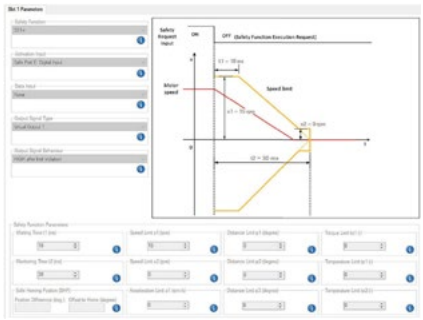
Example 1



Example 2



Example 3



• System requirements

Item	System requirement
Supported Languages	English and German
OS	Windows 10 or higher
Microsoft .NET Framework	4
CPU	1 GHz or higher recommended
Memory	1 GB or higher recommended
Available Hard Disk Space	20 GB free disk space
Interfaces	USB 1.1 (2.0) for the connection from the PC to the SERVOPACK
Connection (Interface to Sigma-7 SERVOPACK)	CmPlatform (CMIF): Installation of SigmaWin+ Version 7 is mandatory because Installation and setup of Advanced Safety Module Parameter Editor does not contain CMIF.

Appendix

Capacity Selection for Regenerative Resistors 194
International Standards 199
Warranty 200

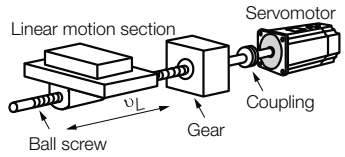
Selecting the servomotor capacity

Use Yaskawa's SigmaSize+, an AC servo drive capacity selection program, to select Servomotor capacity. With the SigmaSize+, you can find the optimum Servomotor capacity by simply selecting and entering information according to instructions from a wizard.

If you select a Servomotor capacity with a formula, refer to the following selecation examples.

Capacity Selection Example for a Rotary Servomotor: For Speed Control

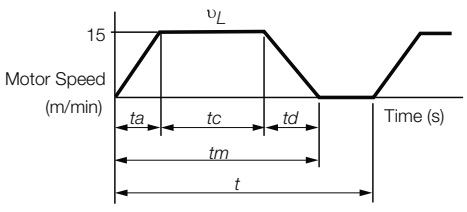
1. Mechanical Specifications



Item	Code	Value
Load Speed	v_L	15 m/min
Linear Motion Section Mass	m	250 kg
Ball Screw Length	ℓ_B	1.0 m
Ball Screw Diameter	d_B	0.02 m
Ball Screw Lead	P_B	0.01 m
Ball Screw Material Density	ρ	7.87×10^3 kg/m^3
Gear Ratio	R	2 (gear ratio: 1/2)
External Force on Linear Motion Section	F	0 N

Item	Code	Value
Gear and Coupling Moment of Inertia	J_G	0.40×10^{-4} kg·m^2
Number of Feeding Operations	n	40 rotations/min
Feeding Distance	ℓ	0.275 m
Feeding Time	tm	1.2 s max.
Friction Coefficient	μ	0.2
Mechanical Efficiency	η	0.9 (90%)

2. Speed Diagram



$$t = \frac{60}{n} = \frac{60}{40} = 1.5 \text{ (s)}$$

If ta = td,

$$ta = tm - \frac{60\,\ell}{v_L} = 1.2 - \frac{60 \times 0.275}{15} = 1.2 - 1.1 = 0.1 \text{ (s)}$$

$$tc = 1.2 - 0.1 \times 2 = 1.0 \text{ (s)}$$

3. Motor Speed

Load shaft speed $\quad n_L = \frac{v_L}{P_B} = \frac{15}{0.01} = 1{,}500 \text{ (min}^{-1}\text{)}$

Motor shaft speed $\quad n_M = n_L \cdot R = 1{,}500 \times 2 = 3{,}000 \text{ (min}^{-1}\text{)}$

4. Load Torque

$$T_L = \frac{(9.8 \cdot \mu \cdot m + F) \cdot P_B}{2\pi R \cdot \eta} = \frac{(9.8 \times 0.2 \times 250 + 0) \times 0.01}{2\pi \times 2 \times 0.9} = 0.43 \text{ (N·m)}$$

5. Load Moment of Inertia

Linear motion section

$$J_{L1} = m\left(\frac{P_B}{2\pi R}\right)^2 = 250 \times \left(\frac{0.01}{2\pi \times 2}\right)^2 = 1.58 \times 10^{-4}\ (\text{kg·m}^2)$$

Ball screw

$$J_B = \frac{\pi}{32}\ \rho \cdot \ell_B \cdot d_B{}^4 \cdot \frac{1}{R^2} = \frac{\pi}{32} \times 7.87 \times 10^3 \times 1.0 \times (0.02)^4 \cdot \frac{1}{2^2} = 0.31 \times 10^{-4}\ (\text{kg·m}^2)$$

Coupling $J_G = 0.40 \times 10^{-4}$ (kg m^2)

Load moment of inertia at motor shaft

$$J_L = J_{L1} + J_B + J_G = (1.58 + 0.31 + 0.40) \times 10^{-4} = 2.29 \times 10^{-4}\ (\text{kg·m}^2)$$

6. Load Moving Power

$$P_O = \frac{2\pi n_M \cdot T_L}{60} = \frac{2\pi \times 3{,}000 \times 0.43}{60} = 135\ (\text{W})$$

7. Load Acceleration Power

$$Pa = \left(\frac{2\pi}{60} n_M\right)^2 \frac{J_L}{ta} = \left(\frac{2\pi}{60} \times 3{,}000\right)^2 \times \frac{2.29 \times 10^{-4}}{0.1} = 226\ (\text{W})$$

8. Servomotor Provisional Selection

① Selection Conditions

$T_L \leq$ Motor rated torque

$\frac{(Po + Pa)}{2}$ < Provisionally selected Servomotor rated output < ($Po + Pa$)

$n_M \leq$ Rated motor speed

$J_L \leq$ Allowable load moment of inertia

The following Servomotor meets the selection conditions.

SGM7J-02A Servomotor

② Specifications of the Provisionally Selected Servomotor

Item	Value
Rated Output	200 (W)
Rated Motor Speed	3,000 (min^{-1})
Rated Torque	0.637 (N·m)
Instantaneous Maximum Torque	2.23 (N·m)
Motor Moment of Inertia	0.263×10^{-4} (kg·m^2)
Allowable Load Moment of Inertia	$0.263 \times 10^{-4} \times 15 = 3.94 \times 10^{-4}$ (kg·m^2)

9. Verification of the Provisionally Selected Servomotor

Verification of required acceleration torque:

$$T_P = \frac{2\pi n_M (J_M + J_L)}{60ta} + T_L = \frac{2\pi \times 3{,}000 \times (0.263 + 2.29) \times 10^{-4}}{60 \times 0.1} + 0.43$$

$\approx$ 1.23 (N·m) < Maximum instantaneous torque...Satisfactory

Verification of required deceleration torque:

$$T_S = \frac{2\pi n_M (J_M + J_L)}{60td} - T_L = \frac{2\pi \times 3{,}000 \times (0.263 + 2.29) \times 10^{-4}}{60 \times 0.1} - 0.43$$

$\approx$ 0.37 (N·m) < Maximum instantaneous torque...Satisfactory

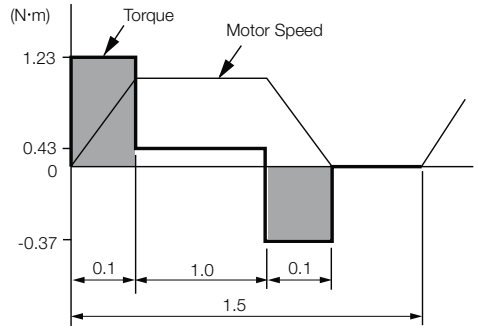
Verification of effective torque value:

$$Trms = \sqrt{\frac{T_P^2 \cdot ta + T_L^2 \cdot tc + Ts^2 \cdot td}{t}} = \sqrt{\frac{(1.23)^2 \times 0.1 + (0.43)^2 \times 1.0 + (0.37)^2 \times 0.1}{1.5}}$$

$\approx$ 0.483 (N·m) < Rated torque...Satisfactory

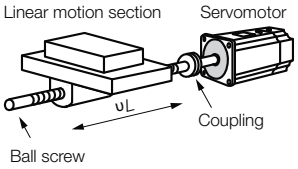
10. Result

It has been verified that the provisionally selected Servomotor is applicable.
The torque diagram is shown below.



Capacity Selection Example for a Rotary Servomotor: For Position Control

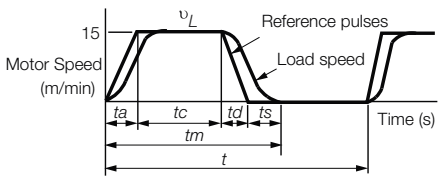
1. Mechanical Specifications



Item	Code	Value
Load Speed	υ_L	15 m/min
Linear Motion Section Mass	m	80 kg
Ball Screw Length	ℓ_B	0.8 m
Ball Screw Diameter	d_B	0.016 m
Ball Screw Lead	P_B	0.005 m
Ball Screw Material Density	ρ	7.87×10^3 kg/m^3
External Force on Linear Motion Section	F	0 N
Coupling Mass	m_C	0.3 kg

Item	Code	Value
Coupling Outer Diameter	d_C	0.03 m
Number of Feeding Operations	n	40 rotation/min
Feeding Distance	ℓ	0.25 m
Feeding Time	tm	1.2 s max.
Electrical Stopping Precision	δ	±0.01 mm
Friction Coefficient	μ	0.2
Mechanical Efficiency	η	0.9 (90%)

2. Speed Diagram



$$t = \frac{60}{n} = \frac{60}{40} = 1.5 \text{ (s)}$$

If ta = td and ts = 0.1 (s),

$$ta = tm - ts - \frac{60\,\ell}{\upsilon_L} = 1.2 - 0.1 - \frac{60 \times 0.25}{15} = 0.1 \text{ (s)}$$

$$tc = 1.2 - 0.1 - 0.1 \times 2 = 0.9 \text{ (s)}$$

3. Motor Speed

Load shaft speed

$$n_L = \frac{\upsilon_L}{P_B} = \frac{15}{0.005} = 3{,}000\ (\text{min}^{-1})$$

Motor shaft speed Direct coupling gear ratio 1/R = 1/1

Therefore, $n_M = n_L$ R = 3,000 × 1 = 3,000 (min^{-1})

4. Load Torque

$$T_L = \frac{(9.8\ \mu \cdot m + F) \cdot P_B}{2\pi R \cdot \eta} = \frac{(9.8 \times 0.2 \times 80 + 0) \times 0.005}{2\pi \times 1 \times 0.9} = 0.139\ (\text{N·m})$$

5. Load Moment of Inertia

Linear motion section

$$J_{L1} = m \left(\frac{P_B}{2\pi R}\right)^2 = 80 \times \left(\frac{0.005}{2\pi \times 1}\right)^2 = 0.507 \times 10^{-4}\ (\text{kg·m}^2)$$

Ball screw $J_B = \frac{\pi}{32} \rho \cdot \ell_B \cdot d_B^4 = \frac{\pi}{32} \times 7.87 \times 10^3 \times 0.8 \times (0.016)^4 = 0.405 \times 10^{-4}\ (\text{kg·m}^2)$

Coupling $Jc = \frac{1}{8} m_C \cdot d_C^2 = \frac{1}{8} \times 0.3 \times (0.03)^2 = 0.338 \times 10^{-4}\ (\text{kg·m}^2)$

Load moment of inertia at motor shaft

$$J_L = J_{L1} + J_B + Jc = 1.25 \times 10^{-4}\ (\text{kg·m}^2)$$

6. Load Moving Power

$$P_O = \frac{2\pi n_M \cdot T_L}{60} = \frac{2\pi \times 3{,}000 \times 0.139}{60} = 43.7\ (\text{W})$$

7. Load Acceleration Power

$$Pa = \left(\frac{2\pi}{60} n_M\right)^2 \frac{J_L}{ta} = \left(\frac{2\pi}{60} \times 3{,}000\right)^2 \times \frac{1.25 \times 10^{-4}}{0.1} = 123.4\ (\text{W})$$

8. Servomotor Provisional Selection

① Selection Conditions

$T_L \leq$ Motor rated torque

$\frac{(Po + Pa)}{2}$ < Provisionally selected Servomotor rated output < ($Po + Pa$)

$n_M \leq$ Rated motor speed

$J_L \leq$ Allowable load moment of inertia

The following Servomotor meets the selection conditions.

SGM7J-01A Servomotor

② Specifications of the Provisionally Selected Servomotor

Item	Value
Rated Output	200 (W)
Rated Motor Speed	3,000 (min^{-1})
Rated Torque	0.318 (N·m)
Instantaneous Maximum Torque	1.11 (N·m)
Motor Moment of Inertia	0.0659×10^{-4} (kg·m^2)
Allowable Load Moment of Inertia	$0.0659 \times 10^{-4} \times 35 = 2.31 \times 10^{-4}$ (kg·m^2)
Encoder Resolution	24 bits (16,777,216 pulses/rev)

9. Verification of the Provisionally Selected Servomotor

Verification of required acceleration torque:

$$T_P = \frac{2\pi n_M (J_M + J_L)}{60ta} + T_L = \frac{2\pi \times 3{,}000 \times (0.0659 + 1.25) \times 10^{-4}}{60 \times 0.1} + 0.139$$

$\approx$ 0.552 (N·m) < Maximum instantaneous torque...Satisfactory

Verification of required deceleration torque:

$$T_S = \frac{2\pi n_M (J_M + J_L)}{60td} - T_L = \frac{2\pi \times 3{,}000 \times (0.0659 + 1.25) \times 10^{-4}}{60 \times 0.1} - 0.139$$

$\approx$ 0.274 (N·m) < Maximum instantaneous torque...Satisfactory

Verification of effective torque value:

$$Trms = \sqrt{\frac{T_P^2 \cdot ta + T_L^2 \cdot tc + Ts^2 \cdot td}{t}} = \sqrt{\frac{(0.552)^2 \times 0.1 + (0.139)^2 \times 0.9 + (0.274)^2 \times 0.1}{1.5}}$$

$\approx$ 0.192 (N·m) < Rated torque...Satisfactory

It has been verified that the provisionally selected Servomotor is applicable in terms of capacity.
Position control is considered next.

10. Position Detection Resolution

Position detection unit: Δ^{ℓ} = 0.01 mm/pulse

The number of pulses per motor rotation must be less than the encoder resolution (pulses/rev).

$$\text{The number of pulses per revolution (pulses)} = \frac{P_B}{\Delta^{\ell}} = \frac{5 \text{ mm}}{0.01 \text{ mm}} = 500 < \text{Encoder resolution [16777216 (pulses/rev)]}$$

11. Reference Pulse Frequency

$$vs = \frac{1{,}000 \upsilon L}{60 \times \Delta^{\ell}} = \frac{1{,}000 \times 15}{60 \times 0.01} = 25{,}000 \text{ (pps)}$$

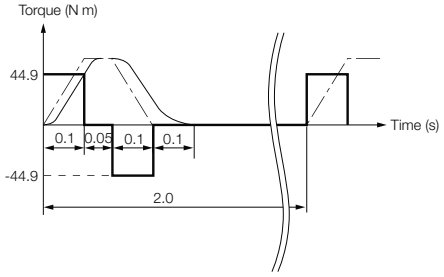
Confirm that the maximum input pulse frequency is greater than the reference pulse frequency.

Refer to the specifications in the SERVOPACK manual for the maximum input pulse frequency.

It has been verified that the provisionally selected Servomotor is applicable for position control.

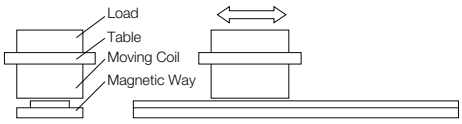
8. Result

It has been verified that the provisionally selected Servomotor is applicable.
The torque diagram is shown below.



Servomotor Capacity Selection Example for Linear Servomotors

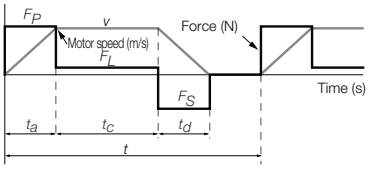
1. Mechanical Specifications



Item	Code	Value
Load Mass	m_W	1 kg
Table Mass	m_T	2 kg
Motor Speed	v	2 m/s
Feeding Distance	l	0.76 m
Friction Coefficient	μ	0.2

Item	Code	Value
Acceleration Time	t_a	0.02 s
Constant-speed Time	t_c	0.36 s
Deceleration Time	t_d	0.02 s
Cycle Time	t	0.5 s
External Force on Linear Motion Section	F	0 N

2. Operation Pattern



3. Steady-State Force (Excluding Servomotor Moving Coil)

$F_L = \{9.8 \times \mu \times (m_W + m_T)\} + F = 9.8 \times 0.2 \times (1 + 2) + 0 = 5.88$ (N)

4. Acceleration Force (Excluding Servomotor Moving Coil)

$$F_P = (m_W + m_T) \times \frac{v}{t_a} + F_L = (1 + 2) \times \frac{2}{0.02} + 5.88 = 305.88 \text{ (N)}$$

5. Provisional Selection of Linear Servomotor

① Selection Conditions

$F_P \leq$ Maximum force × 0.9

$F_s \leq$ Maximum force × 0.9

$F_{rms} \leq$ Rated force × 0.9

② Specifications of the Provisionally Selected Servomotor

Item	Value
Maximum Force	440 (N)
Rated Force	147 (N)
Moving Coil Mass (m_M)	0.82 (kg)
Servomotor Magnetic Attraction (F_{att})	0 (N)

6. Verification of the Provisionally Selected Servomotor

Steady-State Force

$F_L = \mu \{9.8 \times (m_W + m_T + m_M) + F_{att}\} = 0.2 \{9.8 \times (1 + 2 + 0.82) + 0\} = 7.5$ (N)

Verification of Acceleration Force

$$F_P = (m_W + m_T + m_M) \times \frac{v}{t_a} + F_L = (1 + 2 + 0.82) \times \frac{2}{0.02} + 7.5$$

$= 389.5$ (N) ≤ Maximum force × 0.9 (= 396 N)… Satisfactory

Verification of Deceleration Force

$$F_S = (m_W + m_T + m_M) \times \frac{v}{t_a} - F_L = (1 + 2 + 0.82) \times \frac{2}{0.02} - 7.5$$

$= 374.5$ (N) ≤ Maximum force × 0.9 (= 396 N)… Satisfactory

Verification of Effective Force

$$F_{rms} = \sqrt{\frac{F_P^2 \cdot t_a + F_L^2 \cdot t_c + F_s^2 \cdot t_d}{t}} = \sqrt{\frac{389.5^2 \times 0.02 + 7.5^2 \times 0.36 + 374.5^2 \times 0.02}{0.5}}$$

$= 108.3$ (N) ≤ Rated force × 0.9 (= 132.3 N)… Satisfactory

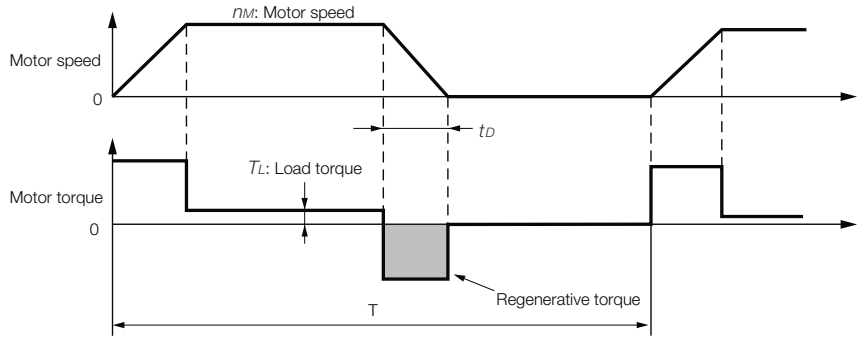
7. Result

It has been verified that the provisionally selected Servomotor is applicable.

Capacity Selection for Regenerative Resistors

Calculating the Regenerative Energy

This section shows how to calculate the regenerative resistor capacity for the acceleration/deceleration operation shown in the following figure.



Calculation Procedure for Regenerative Resistor Capacity

Step	Item	Code	Formula
1	Calculate the rotational energy of the Servomotor.	E_S	$E_S = Jn_M^2/182$
2	Calculate the energy consumed by load loss during the deceleration period	E_L	$E_L = (\pi/60)\, n_M T_L t_D$ Note: If the load loss is unknown, calculate the value with E_L set to 0.
3	Calculate the energy lost from Servomotor winding resistance.	E_M	(Value calculated from the graphs in ◆*Servomotor Winding Resistance Loss*) $\times t_D$
4	Calculate the energy that can be absorbed by the SERVOPACK.	E_C	Calculate from the graphs in ◆*SERVOPACK-absorbable Energy*
5	Calculate the energy consumed by the regenerative resistor.	E_K	$E_K = E_S - (E_L + E_M + E_C)$ $E_K = E_S - (E_L + E_M + E_C) + E_G$ Note: Use this formula if there will be continuous periods of regenerative operation, such as for a vertical axis.
6	Calculate the required regenerative resistor capacity (W).	W_K	$W_K = E_K/(0.2 \times T)$

E_G (joules): Energy for continuous period of regenerative operation

$E_G = (2\pi/60)\, n_{MG} T_G t_G$

T_G: Servomotor's generated torque in continuous period of regenerative operation (N m)

n_{MG}: Servomotor's motor speed for same operation period as above (min^{-1})

t_G: Same operation period as above (s)

Note: 1. The 0.2 in the equation for calculating W_K is the value when the regenerative resistor's utilized load ratio is 20%.

2. The units for the various symbols are given in the following table.

Code	Description
E_S to E_K	Energy in joules (J)
W_K	Required regenerative resistor capacity (W)
J	$= J_M + J_L$ ($kg \cdot m^2$)
n_M	Servomotor motor speed (min^{-1})

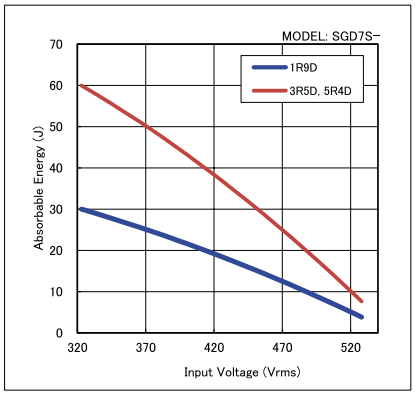
Code	Description
T_L	Load torque (N m)
t_D	Deceleration stopping time (s)
T	Servomotor repeat operation cycle (s)

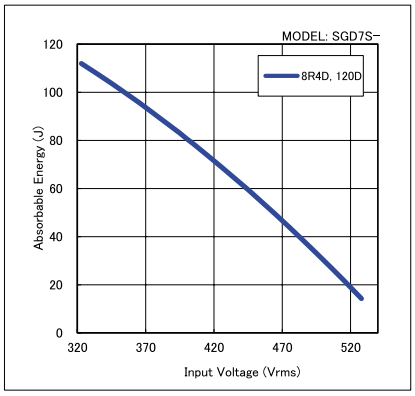
If the value of W_K does not exceed the capacity of the built-in regenerative resistor of the SERVOPACK, an External Regenerative Resistor is not required. For details on the built-in regenerative resisters, refer to the SERVOPACK specifications. If the value of W_K exceeds the capacity of the built-in regenerative resistor, install an External Regenerative Resistor with a capacity equal to the value for W calculated above.

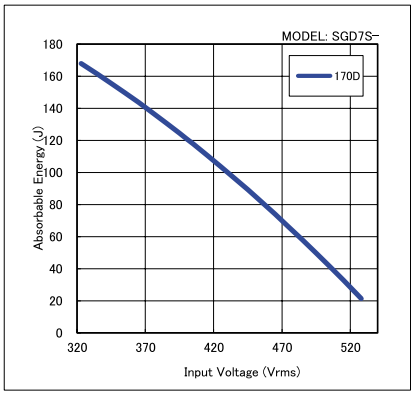
SERVOPACK-absorbable energy

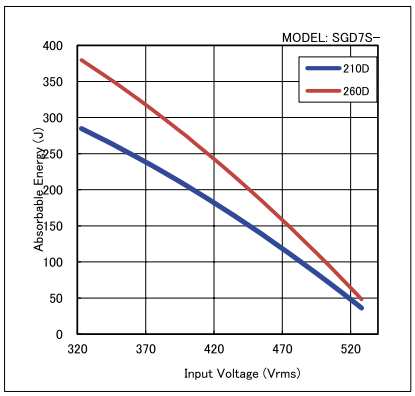
The following figures show the relationship between the SERVOPACK's input power supply voltage and its absorbable energy.

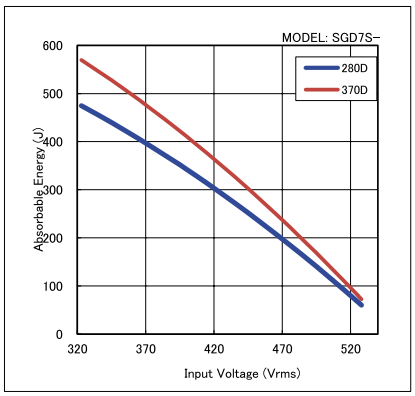
Sigma-7S SERVOPACKs



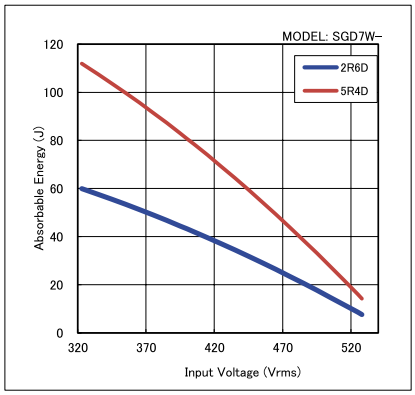








Sigma-7W SERVOPACKs



Servomotor winding resistance loss

The following figures show the relationship for each Servomotor between the Servomotor's generated torque and the winding resistance loss.

Details of warranty

Warranty period

The warranty period for a product that was purchased (hereinafter called the “delivered product”) is one year from the time of delivery to the location specified by the customer or 18 months from the time of shipment from the Yaskawa factory, whichever is sooner.

Warranty scope

Yaskawa shall replace or repair a defective product free of charge if a defect attributable to Yaskawa occurs during the above warranty period. This warranty does not cover defects caused by the delivered product reaching the end of its service life and replacement of parts that require replacement or that have a limited service life.

This warranty does not cover failures that result from any of the following causes.

- Improper handling, abuse, or use in unsuitable conditions or in environments not described in product catalogs or manuals, or in any separately agreed-upon specifications
- Causes not attributable to the delivered product itself
- Modifications or repairs not performed by Yaskawa
- Use of the delivered product in a manner in which it was not originally intended
- Causes that were not foreseeable with the scientific and technological understanding at the time of shipment from Yaskawa
- Events for which Yaskawa is not responsible, such as natural or human-made disasters

Limitations of liability

- Yaskawa shall in no event be responsible for any damage or loss of opportunity to the customer that arises due to failure of the delivered product.
- Yaskawa shall not be responsible for any programs (including parameter settings) or the results of program execution of the programs provided by the user or by a third party for use with programmable Yaskawa products.
- The information described in product catalogs or manuals is provided for the purpose of the customer purchasing the appropriate product for the intended application. The use thereof does not guarantee that there are no infringements of intellectual property rights or other proprietary rights of Yaskawa or third parties, nor does it construe a license.
- Yaskawa shall not be responsible for any damage arising from infringements of intellectual property rights or other proprietary rights of third parties as a result of using the information described in catalogs or manuals.

Suitability for use

- It is the customer’s responsibility to confirm conformity with any standards, codes, or regulations that apply if the Yaskawa product is used in combination with any other products.
- The customer must confirm that the Yaskawa product is suitable for the systems, machines, and equipment used by the customer.
- Consult with Yaskawa to determine whether use in the following applications is acceptable. If use in the application is acceptable, use the product with extra allowance in ratings and specifications, and provide safety measures to minimize hazards in the event of failure.
  - » Outdoor use, use involving potential chemical contamination or electrical interference, or use in conditions or environments not described in product catalogs or manuals
  - » Nuclear energy control systems, combustion systems, railroad systems, aviation systems, vehicle systems, medical equipment, amusement machines, and installations subject to separate industry or government regulations
  - » Systems, machines, and equipment that may present a risk to life or property
  - » Systems that require a high degree of reliability, such as systems that supply gas, water, or electricity, or systems that operate continuously 24 hours a day
  - » Other systems that require a similar high degree of safety
- Never use the product for an application involving serious risk to life or property without first ensuring that the system is designed to secure the required level of safety with risk warnings and redundancy, and that the Yaskawa product is properly rated and installed
- The circuit examples and other application examples described in product catalogs and manuals are for reference. Check the functionality and safety of the actual devices and equipment to be used before using the product
- Read and understand all use prohibitions and precautions, and operate the Yaskawa product correctly to prevent accidental harm to third parties

Specifications change

The names, specifications, appearance, and accessories of products in product catalogs and manuals may be changed at any time based on improvements and other reasons. The next editions of the revised catalogs or manuals will be published with updated code numbers. Consult with your Yaskawa representative to confirm the actual specifications before purchasing a product.
