Since 1992

A 50W motor and a 100W motor became more compact.<sup>(\*1)</sup>

M5G series

# The Compact-Motor

(The motor in this picture is "M5G005 
N 
\*\*".)

# Has a Great Value.

\*1) About 15 % has been shortened compared with the body full length of previous M5B005 series and M5B010 series.

A wide range of customers have found SD3 invaluable for many industrial equipment and machinery needs. SD3 is now being applied in semiconductor manufacturing machines, processing machines, printing machines, textile machines, a large variety of automation machinery, as well as for LED panel-handling robots.

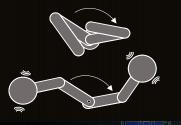

## Inheriting State-of-the-Art Technology for Robot Control — Robust Control

The SD3 Servo Amplifier is equipped with servo control which takes advantage of our expertise in LCD and semiconductor robotics. Decoupling command responsiveness and disturbance compensation using observerbased model matching and feedforward, our Servo Amplifier offers control for two degrees of freedom.

Even under load fluctuations, you can expect smooth motion without needing to change tuning parameters. This control method is ideal for applications with high rigidity such as ball drives, where you will experience excellent command responsiveness.

BOT CONTRO

#### [Robust Control]

Robust Control is a control method which maintains expected robustness and stability even when the actual specifications of robots are slightly different from the initially intended control model.

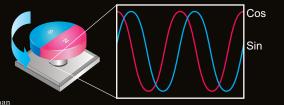

## Ultimate Toughness and Low Current Consumption — Magnetic Absolute Encoder

No other type of encoder matches the ultimate toughness of the magnetic rotary encoder - which is its greatest advantage. Magnetic rotary encoders are resistant to oil and dust, and exhibit robust power in harsh production environments. SD3 original 1 pole magnetic absolute encoder has a straightforward, hard-to-break structure, and its resolution is comparable to optical encoders. Our new encoder is your one-stop solution for the ever-challenging threesome of goals: "toughness in harsh environments", "resolution", and "cost".

Also, our encoder features battery-free single-turn absolute position detection. Furthermore, its current consumption upon battery backup is among the lowest in the industry.

a half of that used by a standard absolute encoder.

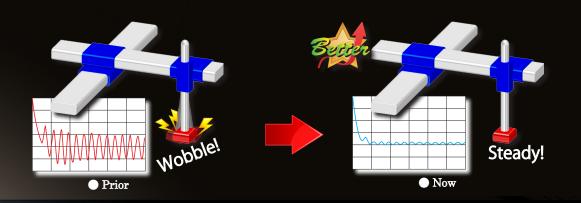

MAGNETIC ENCODER

## Learning in the Field and Constantly Evolving — Amplifier Performance

Our new stronger damping filter helps your machine better suppress machine tip wobbles. With the newly developed " $\gamma$ -notch" filter, you may flexibly set responsiveness in frequency ranges higher than the notch frequency. Our new Servo offers shorter settling time for positioning, while maintaining the same damping features as before.

## Specialized Tool Based on Ergonomics — Servo Studio

Servo studio is a powerful Software that eases setup, tuning, state monitoring, and effective use of SD3 Servo Amplifier. Now with its enhanced features, Servo studio is even more user-friendly and powerful.

With the greatly enhanced functionality, you can now setup our new damping filter from the intuitive interface, use an additional function "vibration noise frequency measurement (FFT)", and get a log of the amplifier alarm.

In addition, smooth startup of your machine is facilitated through an amplifier point table (that can be set up to 16 points), and the test run features.

Installing Precautions

Never remove the encoder or dismantle the motor body.

The motor shaft has anti-rust oil applied at the shipment. Please wipe off the oil before installing the motor.

Make sure to perform centering (alignment) carefully and properly. Operating the motor without sufficient alignments might cause vibrations or a shorter service life of the motor. Connecting with a Mechanical System When connecting the motor to a load, use a coupling to absorb misalignments so that the motor shaft load remains.

Within the rated load to the motor shaft.

Improper use may cause a shorter service life of the motor bearing and damage the shaft. We recommend the use of flexible couplings.

Installation Orientations and Oil Seals

The motor can be installed either vertically or horizontally. Please observe the following precautions. • Horizontal installation: Face the cable pull unit down in order to protect the motor against oil, water and dust. • Vertical installation : For a motor combined with a decelerator being on top of the motor shaft, use an oil sealed motor

M7A

High Inertia

to prevent the decelerator oil from seeping into the motor.

\*1) Measurement conditions

room temperature, the motor not in motion, battery voltage of 3.6 V.\*2) CCW when viewed from the load side shaft end.

## Precautions

Using the motor with rotations of 180 degrees or less will reduce the encoder's rotational accuracy. For a motor equipped with a brake, follow the brake voltage and polarity specifications. If the brake voltage is less than 12 V or the polarity is reversed, the encoder's rotational accuracy will be reduced.

## Peripherals

To make your applications of our product comply with the European EC directives, select devices that meet each applicable standard and install them observing the wiring diagram.

| ltem                                      | Description  |  |  |  |  |  |  |  |
|---|--|--|--|--|--|--|--|--|
| Main circuit power                        | <ul> <li>Please use this product in the power supply environment of Over-Voltage Category II defined by IEC60664-1.</li> <li>This is the primary circuit power for amplifiers.</li> <li>50 W to 750 W Amplifiers : Single-phase AC200 V - 10% to AC240 V +10%</li> <li>1 kW to 2 kW Amplifiers : Three-phase AC200 V - 10% to AC240 V +10%</li> <li>Using a overvoltage protection relay is recommended.</li> <li>When having single-phase power wired to a 1 kW amplifier, wire the primary circuit AC200 V between the L1 and L3 terminals of the amplifier.</li> <li>To avoid unbalance of the three-phase AC200 V wiring in your factory, we recommend that you consider balance of currencies in your three-phase wirings.</li> <li>Confirm that your contract with the electric power company is not limited to use of three-phase.</li> </ul> |  |  |  |  |  |  |  |
| Control power                             | This is power supply of DC24 V $\pm$ 10 % for amplifier control power, I/O power and motor brake release power.<br>Use a SELV (Safety Extra Low Voltage) power supply with reinforced insulation against hazardous voltages.<br>Be sure to connect a varistor to the motor braking release power supply.   |  |  |  |  |  |  |  |
| Cables                                    | Use of UL wires and cables suitable for motor rated output are recommended.<br>High-voltage cables and FG cables<br>AWG18 / 600 V breakdown voltage or equivalent for 50 W to 750 W<br>AWG14 / 600 V breakdown voltage or equivalent for 1 kW to 2 kW<br>Motor power cables<br>AWG18 / 300 V breakdown voltage or equivalent for 50 W to 750 W<br>AWG14 / 300 V breakdown voltage or equivalent for 1 kW to 2 kW<br>Encoder cables<br>• AWG22 and AWG24 compound / 30 V breakdown voltage or equivalent<br>• shielded cables with twisted pair wires<br>• length not exceeding 20 m<br>User I/O cable<br>• AWG26 / 300 V breakdown voltage or equivalent<br>• shielded cables with twisted pair wires<br>• length not exceeding 2 m  |  |  |  |  |  |  |  |
| Circuit breaker                           | To protect the power supply line, circuit breakers shut the circuit down in the event of over-current.<br>Be sure to use an IEC standard and UL-certified circuit breaker between the power supply and the noise filter.<br>To ensure compliance with EMC, use an earth leakage circuit breaker that we recommend.   |  |  |  |  |  |  |  |
| Noise filter                              | Noise filters prevent ingress of external noise from the power supply line.<br>To ensure compliance with EMC, use the recommended noise filter.  |  |  |  |  |  |  |  |
| Electromagnetic contactor                 | This is an on/off switch for the main power supply. Use a surge absorber on the input side of the primary circuit power supply.  |  |  |  |  |  |  |  |
| Surge absorber                            | To ensure compliance with EMC, connect the recommended surge absorber to the primary side of primary circuit power supply.   |  |  |  |  |  |  |  |
| Signal line noise filter/<br>ferrite core | To ensure compliance with EMC, use the recommended signal line noise filter/ferrite core.  |  |  |  |  |  |  |  |
| Regenerative resistor                     | This product is not equipped with regenerative resistor. If the smoothing capacitor inside the servo amplifier cannot absorb regenerative power, an external regenerative resistor is required. As a guideline, check the regeneration state on the settings panel, and use a regenerative resistor if the regenerative voltage warning is ON. Build an overheating prevention circuit using a resistor which has built-in thermostat. If the temperature of generated heat becomes high, you can suppress the heat by installing a cooling device, or selecting a resistor whose allowable power is 5 to 10 times larger than regenerative voltage.   |  |  |  |  |  |  |  |
| Dynamic brake                             | This product is not equipped with a dynamic brake feature.<br>Use our optional product for 50 W to 1 kW<br>Model AP03101 (50 W to 750 W), Model AP03102 (1 kW).<br>See Optional manual Dynamic brake unit<br>Use the circuit example on the right side when building a<br>dynamic brake circuit.<br>Select a cement resistor of 6.8 $\Omega$ 10 W.<br>Select coil surge protection relays with diode.<br>For wiring with the motor power line, UL wires (AWG18 /<br>600 V or equivalent) are recommended.  |  |  |  |  |  |  |  |
| Grounding                                 | Since this product is Class I device, protective grounding is mandatory. (Type D grounding: grounding resistance of up to 100 $\Omega$ )<br>Properly ground the product using protective grounding terminals through EMC-compatible casing and control panel.  |  |  |  |  |  |  |  |

## **Recommended Peripheral Devices**

| Device                                    | Manufacturer   | Model  | Note   |
|---|--|--|--|
| Circuit breaker                           | Fuji Electric Co Ltd                                     | Single-phase : EW32AAG-2P020B<br>Three-phase : EW32AAG-3P020B  | 20 A for single-phase or three-phase 200 V (*)<br>Leakage current of 30 mA, Equivalent products<br>are acceptable. |
| Noise filter                              | OKAYA Electric Industries<br>Co Ltd                      | Single-phase : SUPF-EX □□ -ER-6<br>Three-phase : 3SUPF-BE □□ -ER-6- □  | Was used in the EMC testing for our product $^{\scriptscriptstyle(e)}$   |
| Magnetic contactor                        | Fuji Electric Co Ltd                                     | SK06G-E10  | Or equivalent alternatives.  |
| Surge absorber                            | OKAYA Electric Industries<br>Co Ltd                      | Single-phase : LV275DI-Q4<br>Three-phase : LV275DI-U4  | Was used in the EMC testing for our product  |
| Signal line noise filter<br>/ferrite core | SEIWA ELECTRIC MFG.<br>CO., LTD.<br>(Misumi Corporation) | E04SR401938<br>(ATCK-1130)   | Was used in the EMC testing for our product  |
| Regenerative resistor                     | Chiba Techno Co., Ltd.                                   | For 50 W to 750 W : CAN100S         47 Ω J           For 1 kW, 1.5 kW         : CAN400S         30 Ω J           For 2 kW         : CAN750S         20 Ω J | -  |

\*) Select a product whose ratings are suitable for your system configuration.

### **Regenerative Resistor**

When considering a regenerative resistor other than the recommended above, use the following as a guideline.

| Amplifier Model                   | SD3005CY** | SD3010CZ** | SD3020C1**   | SD3040C2** | SD3080C3** | SD3100C4** | SD3150C6** | SD3200C8** |
|-----------------------------------|------------|------------|--------------|------------|------------|------------|------------|------------|
| Compatible Motor                  | M 🗌 🗌 005  | M 🗌 🗌 010  | M □□ 020     | M □□ 040   | M 🗌 🗌 075  | M □□ 100   | M 🗌 🗌 150  | M 🗌 🗌 200  |
| Rated output                      | 50 W       | 100 W      | 200 W        | 400 W      | 750 W      | 1 kW       | 1.5 kW     | 2 kW       |
| Regeneration resistance           |            |            | 40 Ω to 50 Ω | 30         | 20 Ω       |            |            |            |
| Regeneration allowable<br>voltage |            | 20 W 40 W  |              |            |            |            |            | 60 W       |

The regeneration resistance values do not guarantee the optimal performance. Regeneration allowable voltages above are minimum values as a point of reference.

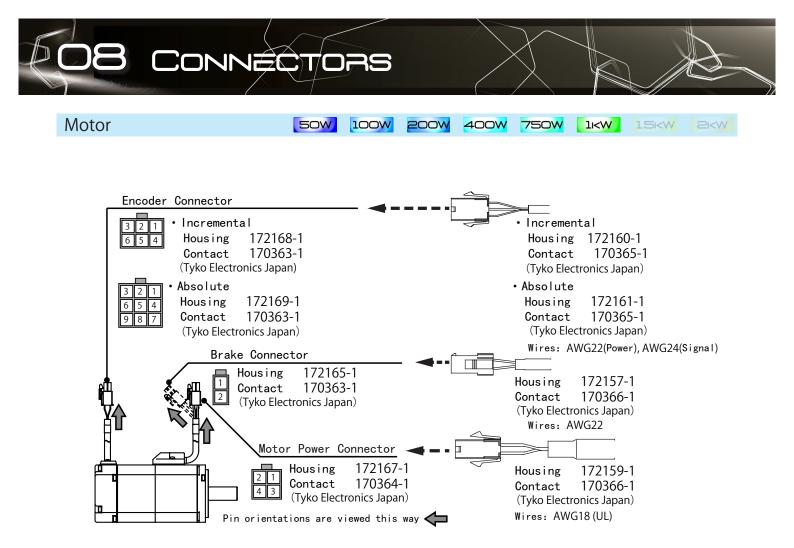

The regeneration resistor may become very hot. It requires sufficient margin of regeneration allowable power.

## **Recommended Cables**

Connection cables required for this product are sold separately. Those can be purchased at the Misumi Corporation online store. Follow the link at our website:

Use our recommendations below to select cables based on your actual usage. (Equivalent alternatives are also good)

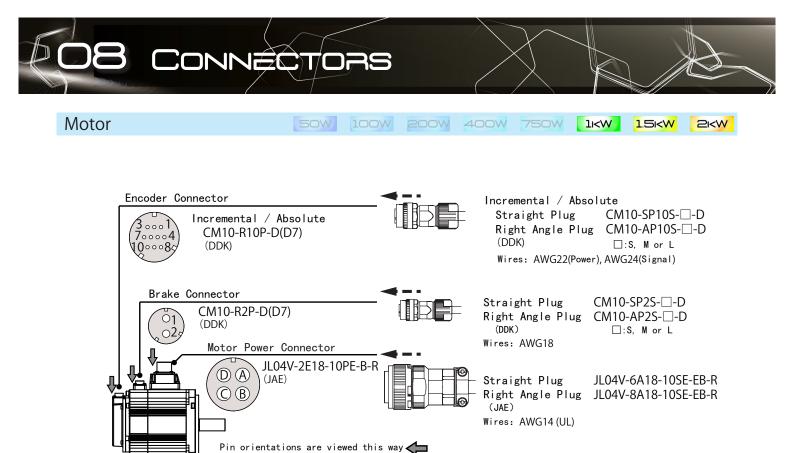

| Cable Name   | AWG                     | UL    | Temperature<br>Rating | Voltage<br>Rating | Note  |
|--|-------------------------|-------|-----------------------|-------------------|---|
| Motor power (≤ 750 W)                                  | 18                      | 2517  | 105 ℃                 | 300 V             |   |
| Motor power (≥ 1 kW)                                   | 14                      | 2517  | 105 ℃                 | 300 V             | AWG16 wires can be used only for 1 kW motors                            |
| Main circuit power (≤ 750 W)<br>( Including FG cable ) | 18                      | 1015  | 105 ℃                 | 600 V             |   |
| Main circuit power (≥ 1 kW)<br>( Including FG cable )  | 14                      | 1015  | 105 ℃                 | 600 V             | AWG16 wires can be used only for 1 kW motors.                           |

\*1) When having single-phase power wired to 1kW amplifiers (DA24A22), connect the primary circuit power to L1 and L3.

\*2) Do not connect when using with single-phase power.

#### Analog Torque Command

#### Notes:

- \*1) Have only one power supply for both the control power (24 V, G24 V) and I/O power (COM+, COM–).
- \*2) When driving a load which contains inductance element (e.g. relay), connect a protection diode. Motor brake can not be directly engaged. Be sure to use a relay with a protection diode in the circuit.
- \*3) The output circuit structure is open connector and Darlington connection transistor output and connects to relay or photocoupler. Note that when Transistor ON, connector-emitter voltage V<sub>CE</sub> (SAT) is approximately 1 V, which does not satisfy V<sub>IL</sub> of regular TTL IC. Hence, the output circuit structure must not be connected directly.
- \*4) Be sure to connect a terminating resistor of around 220  $\Omega$  .
- \*5) Connect to the communication I/O signal ground of the host controller which outputs amplifier encoder output signal. Connecting the signal ground to the amplifier control power GND might result in malfunction.
- \*6) When Z-phase pulse width is too narrow to be recognized by the host controller accurately, decrease the paired-pulse ratio "Encoder pulse output Division and multiplication" with parameters No. 276.0 and No. 278.0, or reduce the number of rotations, so that the pulse width becomes wider. Pulse width ms = Pulse width ms = 2 / (the number of rotations) / (the paired-pulse ratio x  $2^{17}$ ) × 60 × 1,000
- \*7) When building a command circuit with a variable resistor (VR) and a resistor (R), in order to have the range of command input voltage to be -10 V to +10 V, VR should be at least 2 k $\Omega$  1/4 W and R should be at least 100  $\Omega$  to 200  $\Omega$  1/4 W. When the host analog velocity command circuit is isolated from the 24 V control power, connect A\_GND to the host SG, not to the control power GND. If not isolated, connect A\_GND to the control power GND.

# Signs below indicate two severity levels of bodily injury/loss, or property damage that could be caused by failure to observe the precautions and improper use of this product. Symbols below indicate two types of precautions that users must follow. Image: Course of the precaution about imminent hazards that are likely to cause death or serious injury. |-------------|--|---|
| ymbol       | Precautions (Dos and Don'ts)   | Anticipated Hazard  |
| -           | Installation & Wiring  |   |
|             | Never connect your SD3 motor directly to commercial power supply.  |   |
|             | No flammables away near your SD3 motor and amplifier.<br>Be sure to protect the amplifier with a protective enclosure and allow the required clearance around the amplifier (as specified in       |   |
|             | the SD3 instruction manual) from the enclosure or any devices.   | <u> </u>  |
|             | Install your SD3 in a location with little dust, and free from water or oil splash.  |   |
|             | Mount the motor or amplifier on nonflammable surface such as metal.  |   |
|             | Be sure to have any wiring work carried out by an electrician.   | A   |
|             | Always ground the FG terminals of the motors and amplifiers.   | A   |
|             | When working with wires, always turn off the circuit breakers first, carry out the work properly and methodically.   | A   |
|             | Be sure to connect all cables properly and insulate all conductors with insulating material.   | Â   |
|             | Handling & Operation   |   |
|             | Never touch the inside of amplifier.   |   |
|             | Cables must not be damaged, stressed, loaded, or pinched.  |   |
|             | Never touch the revolving component of the motor while it is in motion.  |   |
|             | Do not use this product near flammable materials or where it could be subjected to water sprays, a corrosive atmosphere, or an atmosphere of flammable gases.                                      |   |
|             | Do not use the product at a location which is subjected to severe vibrations or impact forces.   | $\land \land \land \land$                                 |
| <b>&gt;</b> | Do not use the product with any of cables being immersed in oil or water.  | <u>A</u> A  |
|             | Do not carry out any wiring work or operations with wet hands.   | $\land \land \land \land$                                 |
|             | When handling a shaft end key-grooved motor, do not touch the key groove with unprotected hands.   |   |
|             | Do not touch the motor or the sink of amplifier as they become hot.  |   |
|             | Do not have the motor driven by external force.  |   |
|             | Other Precautions  |   |
| _           | Be sure to verify safety after an earthquake.  | <u>A A A</u>  |
|             | Carry out mounting and installation securely, in order to prevent fire or personal injury during an earthquake.  |   |
|             | Install an external emergency stop circuit so that operations can be stopped and power supplies shut down immediately upon occurrence of an emergency.   | $\underline{A} \underline{A} \underline{A} \underline{A}$ |
|             | Maintenance & Inspection   |   |
|             | Never dismantle the SD3 product.   |   |
|             | The amplifier has components with dangerously high voltage. Prior to each wiring or inspection work, allow more than 5 minutes (after power shuts off) for complete discharge of internal voltage. | A   |
|             | CAUTION  |   |
| nbol        | Precautions (Dos and Don'ts)   | Anticipated Hazar   |

| Symbol | Precautions (Dos and Don'ts)  | Anticipated Hazards |
|--------|---|---------------------|
|        | Installation & Wiring   |                     |
|        | Do not touch the connector terminals directly with hands.   |                     |
|        | Do not cover the vent holes of the amplifier. Do not allow ingress of foreign matter.   |                     |
|        | Observe the specifications of motor/amplifier combinations.   | AA                  |
|        | For test runs, be sure to check motor movement with the motor being fixed in place and not attached to your mechanical system first, and then install the motor in the mechanical system. |                     |
|        | Follow the specified mounting method and orientations.  |                     |
|        | Use the right mounting method that is suitable to the main body weight and the rated output of this product.  |                     |

# 

| mbol     | Precautions (Dos and Don'ts)   | Anticipated Hazards  |
|----------|--|----------------------|
|          | Handling & Operations  |                      |
|          | Do not step on this product or place any heavy object on it.   |                      |
|          | To avoid unstable motions, never make drastic changes in tuning.   |                      |
|          | Do not approach your machine after power restoration following power outage. It may restart unexpectedly. Configure your machine to ensure safety of your personnel against its unexpected restarts. |                      |
| 0        | Do not use the product where it could be exposed to direct sunlight.   |                      |
|          | Do not apply impact load to the product.   |                      |
|          | Never operate or stop the motor using the electromagnetic contactor installed on the main power supply side.   |                      |
|          | The brake installed in the motor is only for holding. Do not use it as a decelerating device.  |                      |
|          | Do not use if the motor or amplifier is malfunctioning, broken, or damaged.  |                      |
|          | Confirm that your power supply specifications comply with this product's.  |                      |
|          | The holdong brake is not a stopping device to secure machine safety. To ensure safety, prepare a stopping device for your machinery.   |                      |
| <u>.</u> | Upon occurrence of an alarm, eliminate the cause and secure safety before resetting the alarm and restarting your machine.   |                      |
|          | Connect the brake control relay and the emergency stop relay in series.  |                      |
|          | Transportation & Storage   |                      |
|          | Do not store the product where it could be subjected to water, moisture, toxic gases, or liquids.  |                      |
| S        | Do not hold the cables or the motor shaft when transporting.   |                      |
|          | Do not let the product fall off or fall over during transportation or installation.  |                      |
|          | If the product was stored away for an extended period of time, check with our distributor.   |                      |
|          | Store the product in a location that meets the requirement of storage environments described in the instruction manual.  |                      |
|          | Disposal   |                      |
|          | Prior to disposal of batteries, insulate them with tape or other material. Dispose of them following the local laws and regulations.   |                      |
|          | When disposing of the SD3 product, treat it as industrial waste.   |                      |
|          | Maintenance & Inspection   |                      |
|          | Overhauls must not be done by anyone but FATEK Automation Corporation.   |                      |
| 0        | Do not turn the power supply on and off too frequently.  |                      |
|          | Your motor, heat sink of the amplifier, or regenerative resistor may become dangerously hot. Do not touch any of them with hands when power is on or for a while after power shutdown.               |                      |
|          | If your amplifier or motor fails, shut down both of the control power supply and the main circuit power supply.  |                      |
|          | When not using the product for an extended period of time, be sure to turn the power off.  | $\overline{\Lambda}$ |

# Other Considerations and Precautions

#### Export of this product or its applications

If the end user or application of the product assumes to be involved in military activities or weapons, its export may be subject to "Foreign Exchange and Foreign Trade Law (Japan)" (or equivalent in your country). Have adequate legal reviews and follow any required export procedures.

#### Medical applications

Do not attempt to use this product or its application for human life related field. This product has been designed and manufactured for general industrial use and its medical applications are not allowed.

Applications for special environments or purposes such as nuclear power, aerospace and transportation

Please contact us in advance.

Applications that could cause serious accidents or damages due to our product failures Be sure to have safety device or protection device installed before using your equipment.

Applying voltage over the rated power supply of this product

Could become fire or smoke hazard to the amplifier. Be sure to check and confirm proper wiring before turning the power on. Be particularly careful in a location such as clean room.

Operations with the motor shaft not grounded electrically

Depending on the device or installation environment, bearing noise might get increased by galvanic corrosion of the motor bearings. Carry out careful check and test on grounding.

#### Operations in environment under significant influences of external noise and static electricity

This product has been designed and manufactured along with extensive noise tests. However, there is a possibility of unexpected behaviors, depending on user's environment. Practice a fail-safe design and also take adequate measures to ensure safety within the range of machine motion.

Use of this product in a manner not specified by the manufacture

Such use shall void the manufacture warranty. Be mindful before you attempt to do so.

#### Maintenance and Inspection

Perform regular maintenance and inspections for safe use of this product. Ensure the safety before each inspection work. This product assumes the following operation conditions.

- Ambient temperature : Average annual temperature of 30 °C (not exceeding the rated temperature range)
- Maximum load factor: 80%
- Maximum operating hours: 20 hours a day

Daily Inspection : Check the following before each operation.

- Check ambient temperature, humidity and atmosphere.
- No foreign objects or dust, especially nothing is blocking the vent holes.
- No over bent or damages of the wires.
- Power supply voltage is within the specifications.
- No foreign objects in mobile components of the device and the range of motions.
- When the power is on, there is no unusual noise or smell right after the machinery starts.

Periodic Inspection : Check for the following at least once a year.

- No loose clamp screw problems in the amplifier and motor.
- No deformation or no discoloration in the amplifier, motor, cables, and terminal blocks due to overheat
- No looseness in wiring fixings and terminal block screws

#### Warranty Information

#### Terms of Warranty

The term of warranty for this product is twelve (12) months after the date of product manufacture. However, brake equipped motors whose number of axis accelerations and decelerations exceeded the rated maximum shall not be covered by the warranty.

#### Conditions of Warranty

Should any failure develop during the warranty period under normal operations following the SD3 instruction manual.

- However, even during the warranty period, Manufacture makes only fee-based repair if the failure is due to the following reasons:
  - Misuse, improper repair, or alternation of the product
  - Dropped after the purchase or damaged during transportation
  - Use of this product in a manner not specified by Manufacture
  - Fire, earthquake, lightning, storm and flood damage, salt damage, abnormal voltage, or any other acts of God or natural disasters
  - · Ingress of foreign matter such as water, oil or metal chips.
- This warranty does not apply to parts or accessories that have been used longer than each rated service life.

The warranty applies to delivered products only and Manufacture shall not be liable for any indirect, incidental or consequential damage caused by the product failure or damage.
